# Bibliographical Abbreviations

All bibliographical abbreviations used in this dictionary are listed below, following the typography used in the text of the dictionary. Broadly, *italic* type is used for periodicals and for reference works; roman type is used for anthologies, series etc. (titles of individual volumes are italicized).

Full bibliographical information is not normally supplied in the list below if it is available elsewhere in the dictionary. Its availability is indicated as follows: D – in the list of 'Dictionaries and encyclopedias of music'; E – in the list of 'Editions, historical'; and P – in the list of 'Periodicals'; these lists are located in vol.28. For other items, in particular national (non-musical) biographical dictionaries, basic bibliographical information is given here; and in some cases extra information is supplied to clarify the abbreviation used.

Festschriften and congress reports are not generally covered in this list. Although Festschrift titles are sometimes shortened in the dictionary, sufficient information is always given for unambiguous identification (dedicatee; occasion, if the same person is dedicatee of more than one Festschrift; place and date of publication; and name(s) of editor(s) if known). For fuller information on musical Festschriften up to 1967 see W. Gerboth: *An Index to Musical Festschriften and Similar Publications* (New York, 1969). The published titles of congress reports are generally reduced to their essentials, but sufficient information is always given for purposes of identification (society or topic; place and date of occurrence; journal issue if published in a periodical; editor(s) and publication details in unfamiliar cases). A comprehensive list of musical and music-related 'Congress reports' appears in vol.28. Further information can be found in J. Tyrrell and R. Wise: *A Guide to International Congress Reports in Music, 1900–1975* (London, 1979).

# Library Sigla

The system of library sigla in this dictionary follows that used by Répertoire International des Sources Musicales, Kassel, as listed in its publication *RISM-Bibliothekssigel* (Kassel, 1999). Below are listed the sigla to be found; a few of them are additional to those published in the RISM list, but have been established in consultation with the RISM organization. Some original RISM sigla that have now been changed are retained here.

More information on individual libraries is available in the libraries list in volume 28.

In the dictionary, sigla are always printed in *italic*. In any listing of sources a national sigillum applies without repetition until it is contradicted.

Within each national list, entries are alphabetized by sigillum, first by capital letters (showing the city or town) and then by lower-case ones (showing the institution or collection).

A: AUSTRIA

*A* Admont, Benediktinerstift, Archiv und Bibliothek

# A Note on the Use of the Dictionary

This note is intended as a short guide to the basic procedures and organization of the dictionary. A fuller account will be found in the Introduction, vol. l, pp.xix–xxix.

**Abbreviations** in general use in the dictionary are listed on pp.vii–xi; bibliographical ones (periodicals, reference works, editions etc.) are listed on pp.xiii–xviii and discographical abbrevations on pp.xix–xx.

**Alphabetization** of headings is based on the principle that words are read continuously, ignoring spaces, hyphens, accents, bracketed matter etc., up to the first comma; the same principle applies thereafter. 'Mc' and 'M'' are listed as 'Mac', 'St' as 'Saint'.

**Bibliographies** are arranged chronologically (within section, where divided), in order of year of first publication, and alphabetically by author within years.

**Cross-references** are shown in small capitals, with a large capital at the beginning of the first word of the entry referred to. Thus 'The instrument is related to the BASS TUBA' would mean that the entry referred to is not 'Bass tuba' but 'Tuba, bass'.

**Signatures** where the article was compiled by the editors or in the few cases where an author has wished to remain anonymous are indicated by a square box (□).

**Work-lists** are normally arranged chronologically (within section, where divided). Italic symbols used in them (like *D-Dl* or *GB-Lbl*) refer to the libraries holding sources, and are explained on pp.xxi–xxxvii; each national sigillum stands until contradicted.

# Contents

# H

[continued]

**Harpégé** (Fr.: 'arpeggiated'). A term found in French Baroque music to indicate that a chord or a passage of music is to be played in an arpeggiated manner. *See* ORNAMENTS, §8.

**Harpègement** (Fr.). *See* ORNAMENTS, §7(ii)(d).

**Harpe pointue** (Fr.). *See* ARPANETTA.

**Harper.** English family of brass instrument players.

(1) **Thomas Harper** (*b* Worcester, 3 May 1786; *d* London, 20 Jan 1853). Trumpeter. He was sent to London at about the age of ten, where he studied with R.T. Eley, later playing in Eley's Royal East India Volunteers Band (*c*1798–1816) and various theatre orchestras. He was the leading trumpeter of his time, and in 1821 succeeded Hyde at the Concert of Ancient Music, the Philharmonic Concerts, the Italian Opera and all the principal concerts and festivals. He taught at the RAM from at least 1829 to 1845. Chiefly known as a soloist, his consummate speciality was the obbligatos to arias by Handel, Purcell and others.

Throughout his life Harper played the slide trumpet, an instrument to whose development he contributed even at a time when valved instruments were beginning to show their superiority. However, he also played the keyed bugle and was Inspector of Trumpets and Bugles to the East India Company. His *Instructions for the Trumpet* (London, *c*1835, 2/1836) devotes most of its space to the slide trumpet, also discussing the twin-valved Russian valve trumpet, the cornet and the keyed bugle. One of his slide trumpets is now at the RAM.

(2) **Thomas (John) Harper jr** (*b* London, 4 Oct 1816; *d* ?London, 27 Aug 1898). Trumpeter, son of (1) Thomas Harper. He studied with his father at the RAM, and later succeeded him in all his appointments, retiring in 1885. He was professor at the RAM, where he taught John Solomon. He also taught at the RCM (1884–93), and was Sergeant Trumpeter to Queen Victoria from 1884 until his death.

Harper was the author of two methods, *Harper's School for the Cornet à pistons* (London, *c*1865) and *Harper's School for the [Slide] Trumpet* (London, *c*1875), in the second of which he spoke out against the 'misappropriation of another instrument [i.e. the cornet] ... to parts designed for the Trumpet'. A silver slide trumpet belonging to him is in the Padbrook collection.

(3) **Charles Abraham Harper** (*b* London, 1819; *d* London, 1 May 1893). Horn player, brother of (2) Thomas Harper jr. He played in various theatre and festival orchestras, and from 1856 to 1886 was first horn at the Royal Italian Opera. He was also a professor at the RAM.

(4) **Edmund Bryan Harper** (*b* London, 4 Sept 1826; *d* Malta, 18 May 1869). Horn player, pianist and organist, brother of (2) Thomas Harper jr. He studied at the RAM (1841–7), later becoming a professor there. In 1847 he married the singer Marianne Lincoln (1822–85), and in about 1850 moved to Hillsborough in Ireland where he and his wife were employed by the Marquis and Marchioness of Downshire as organist and opera singer respectively. For reasons now obscure Harper registered in 1863 as 'Private Edmund Brooks' in the 87th Royal Infantry Fusiliers in Malta, where he later died in a military hospital.

BIBLIOGRAPHY

S. Sorenson and J. Webb: 'The Harpers and the Trumpet', *GSJ*, xxxix (1986), 35–57

S.P. Sorenson: *Thomas Harper, Sr. (1786–1853): Trumpet Virtuoso and Pedagogue* (diss., U. of Minnesota, 1987)

EDWARD H. TARR

**Harper, Edward (James)** (*b* Taunton, 17 March 1941). English composer. He read music at Oxford (1959–63) and continued studying composition with Gordon Jacob at the RCM (1963–4) and later in Milan with Franco Donatoni (1968); in 1964 he won the Cobbett chamber music prize. He became a lecturer (1964) then a reader in music at Edinburgh University. He directed the New Music Group of Scotland (1973–91).

After the culmination of his early serial style in the Piano Concerto (1970), a return to tonality and an interest in the reworking of older music was marked by *Bartók Games* (1972). These features persisted in the one-act opera *Fanny Robin* (1975) which utilises a theme from Purcell's *Dido and Aeneas* (with which it is intended to be performed), as well as echoing the melos of English folksong. The widely-performed *Intrada after Monteverdi*, written for the 1982 Edinburgh Festival, develops material from the opening toccata of *Orfeo*. The opera *Hedda Gabler*, performed by Scottish Opera in 1985, on a libretto after Ibsen, is Harper's most ambitious work, and reveals an eloquent dramatic voice. Like *Fanny Robin* and the chamber opera *The Mellstock Quire* (1988), it contains passages of spoken melodrama.

The quintessentially English quality in many of Harper's works is especially evident in the *Homage to Thomas Hardy* (1990). His music combines emotional directness with a close-textured refinement. His treatment of the music of older composers, who also include Byrd, Schubert, Elgar and Dallapiccola, is eager and generous, sometimes humorous, but never swerving into irony.

WORKS
(*selective list*)

Op: Fanny Robin (1, Harper, after T. Hardy), 1975; Hedda Gabler (3, Harper, after H. Ibsen), 1985; The Mellstock Quire (chbr op, Harper and R. Savage), 1988

Orch: Pf Conc., 1970; Sonata, chbr orch, 1971; Bartók Games, 1972; Sym, 1979; fantasia IV, vn, pf, orch, 1981; Cl Conc., 1982; Fantasia V, chbr orch, 1985; Double Variations, ob, bn, wind ens, perc, 1989; The Fiddler of the Reels, str orch, 1993

RAYMOND MONELLE

**Harper, Heather (Mary)** (*b* Belfast, 8 May 1930). Northern Ireland soprano. She studied in London and made her début in 1954 as Lady Macbeth with the Oxford University Opera Club. She sang First Lady (*Die Zauberflöte*) in 1957 at Glyndebourne, returning as Anne Trulove in 1963. With the New Opera Company she created Lucie Manette in Benjamin's *A Tale of Two Cities* (1957) and sang the Woman in the British stage première of *Erwartung* (1960). Her Covent Garden début was as Helena (*A Midsummer Night's Dream*) in 1962, and she returned as Ellen Orford, Micaëla, Blanche (*Dialogues des Carmélites*), Gutrune, Eva, Antonia, Mrs Coyle (*Owen Wingrave*), which she had created on television (1971), Arabella and Nadia in the première of Tippett's *The Ice Break* (1977). At Bayreuth (1967–8) she sang Elsa and in Buenos Aires (1969–72) Arabella, Donna Elvira, Marguerite and Vitellia (*La clemenza di Tito*). She was highly praised as the Governess (*The Turn of the Screw*) with the English Opera Group (1972), although Ellen Orford was her most sympathetic role, admirably suited to her firm, expressive, well-projected voice and eloquent enunciation. She retired from opera in 1984, but sang Nadia in a concert performance of *The Ice Break* at the 1990 Proms in London.

On the concert platform Harper was at home in music ranging from Monteverdi madrigals, Bach and Handel (of whom she was a specially admired interpreter) through Mahler, Delius and Vaughan Williams to Webern and Dallapiccola. She had the technical assurance and confidence in her own abilities to encompass the demands of Strauss's *Vier letzte Lieder* and Tippett's Third Symphony, in which she was the soloist in the première (1972). She recorded both these works and much else in her extensive repertory, notably the Female Chorus (*The Rape of Lucretia*), Helena and Mrs Coyle with the composer and Ellen Orford with Colin Davis.

ALAN BLYTH

**Harper, Thomas** (*d* ?London, March 1656). English music printer. He worked in London from 1614 and acquired part of the business of Thomas Snodham. From 1650 until his death he printed all the elder John Playford's music publications, including the first edition of *The English Dancing Master* (dated 1651 but issued in 1650). His business at Paternoster Row, London, was inherited by William Godbid.

MIRIAM MILLER

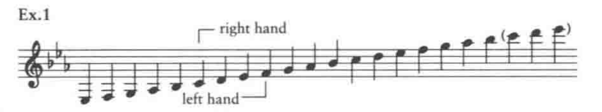
**Harp-guitar.** *See* HARP-LUTE (ii).

**Harpichordo.** *See* ARPICORDO.

**Harp-lute (i).** A term used by Hornbostel and Sachs in their system of musical instrument classification for a family of West African chordophones because of their superficial similarity to the Western lute (*see* CHORDOPHONE). In fact they share more characteristics of the harp than the lute, for which reason the designation 'bridge harp' has been proposed by Roderick Knight. The best known instrument of this type is the KORA of the Mande people of The Gambia. For detailed discussion and bibliography, *see* BRIDGE HARP and HARP, §III.

**Harp-lute (ii).** A generic term for certain types of guitar that developed in England between 1798 and 1828, all slightly shorter than the conventional guitar and characterized by a soundbox 38–45 cm × 33–40 cm × 8–15 cm with a vaulted back. There had been many experiments with such instruments, for example the *décacorde*, a ten-string lute-guitar hybrid invented and composed for by GABRIEL-LOUIS BESSON at Versailles in the late 18th

*1. Harp-guitar: engraving by E. Stalker from Felice Chabran's 'Instructions' (London, 1817)*



*2. (a) Girl playing a dital harp: aquatint by James Anthony Minasi and Joseph Constantine Stadler after Edward Francis Burney, after 1819; (b) harp-lute by Edward Light, London, c1810 (Victoria and Albert Museum, London)*

century. The harp-guitar developed by EDWARD LIGHT of London in 1798 (fig.1) was based on the ENGLISH GUITAR. It had eight gut strings with a vibrating length of about 64 cm, tuned *f–g–c′–e′–g′–c″–e″–g″* (the top six strings the same as the English guitar). Mordaunt Levien of Paris added three brass stops (*pédales*) on the back of his seven-string *guitare-harpe*, enabling the strings to be raised a semitone. He patented the instrument, including the *pédales*, in 1825. Edward Light devised a harp-lute-guitar, with a theorbo-like second pegbox and 11 strings tuned *B♭–e♭–f–g–a♭–b♭–c′–d′–e♭′–g′b♭′* and notated a major 6th higher. The four lowest strings were unfretted.

By 1811 (when music for the instrument was registered at Stationers' Hall) Light had invented the harp-lute (fig.2*b*), which had semitone-raising stops like the Levien *guitare-harpe* and a harp-like pillar terminating in a scroll head (later a Corinthian capital), which returned to the soundbox by a kind of 'harmonic curve' on which was fixed a fingerboard. His large flat-backed variant with oval soundbox, the harp-lyre, was referred to in an advertisement in an issue of the *Caledonian Mercury* of 1815. These instruments developed relatively quickly. ANGELO BENEDETTO VENTURA, formerly a partner with Light, produced a similar, 12-string harp-lyre, the 'Imperial ottavino', and an 'Imperyal' lyre, and in 1814 added a couple of strings to create the 'Imperial' harp-lute. Charles Wheatstone added a second fingerboard and called the result a 'Regency' harp-lute. These instruments were actually tuned a 6th higher than the harp-lute-guitar, and their music was written at pitch. The lower eight strings were open; the upper limits of the range varied with the number of strings, but was at least two octaves above *c′*. Not to be outdone, Light patented in 1816 an improved 'British' lute-harp with up to 13 'ditals' (analagous to harp pedals) for raising open strings one semitone. By 1819 this had become the dital harp (fig.2*a*), with up to 20 strings, and frets only for the top five or so strings (see ex.1 for its tuning). The use of lever- or piston-

Ex.1

operated stops reached its most complex stage of development in Ventura's 'Harp Ventura'.

The intended purchasers of these hybrids were London ladies and, to a lesser extent, their provincial and Parisian counterparts. Inspired by the supposed example of Princess Charlotte of Wales (whose patronage was claimed by both Light and Ventura), ladies were exhorted

to accompany their songs with these decorative (albeit increasingly unwieldy) instruments (in this respect the fashion for the harp-lute was similar to the almost-coincidental Parisian fashion for the LYRE-GUITAR), but this market vanished with the advent of the mass production of pianos.

Tutors for the instruments were published by R. Downes ('Regency' harp-lute), T. Bolton and F. Chabran (harp-guitar and harp-lute-guitar), Light, Parry, Wheatstone and Ventura. Published music consisted of songs and instrumental arrangements and some simple compositions and variations, mostly in 16-, 24- or 32-bar binary form with tonic-dominant harmony.

Michael Praetorius, in his *Theatrum instrumentorum* (1620), had depicted an unnamed precursor to the harp-lute.

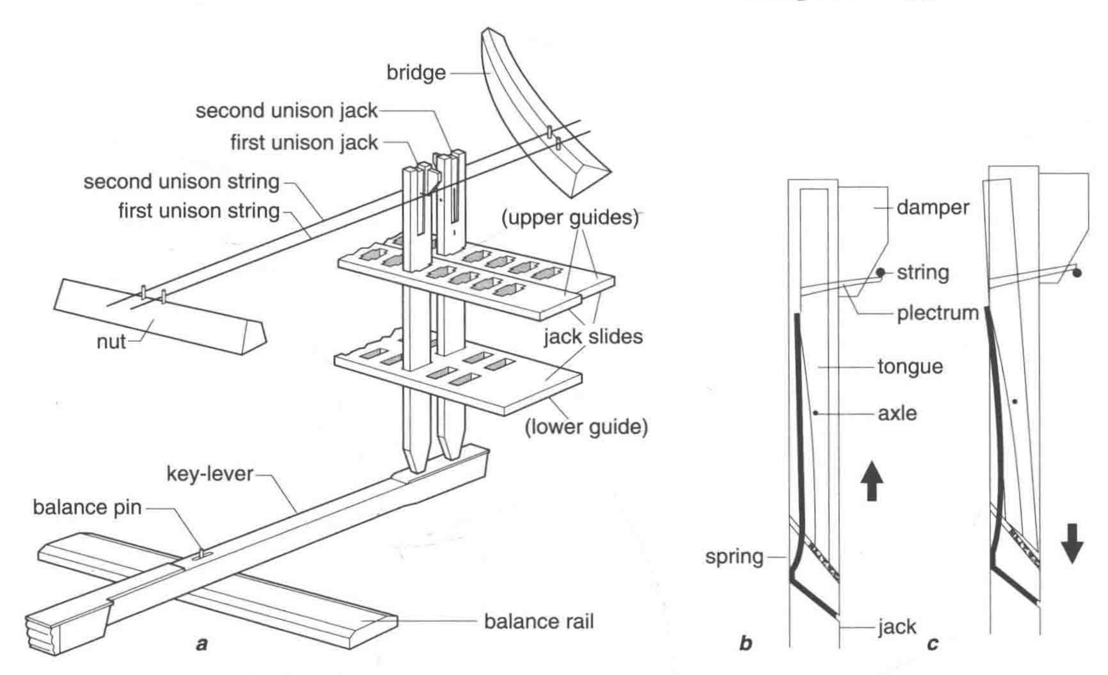
STEPHEN BONNER

**Harp-lyre.** *See* HARP-LUTE (ii).

**Harp-piano** [keyed harp]. An instrument in the shape of a harp, fitted with a keyboard action. Ever since Mersenne (*Harmonie universelle*, Paris, 1636–7, iii) mentioned an attempt to fit a keyboard action to a harp-type instrument, investors have experimented repeatedly with mechanisms that pluck or strike the strings. Among the earliest is probably the claviarpa, a harp-like instrument controlled from a keyboard, thought to have been invented in the 17th century in Spain by Juan Hidalgo. The first such instrument to have established itself seems to have been the claviharpe demonstrated by JOHANN CHRISTIAN DIETZ (i) in Paris in 1814. The instrument was strung with gut and had three pedals, sustaining, bassoon and buff stop. Dietz and his son produced versions of this instrument until about 1890. Numerous other such hybrids were devised during the 19th century. For further information see *The New Grove Dictionary of Musical Instruments*.

HOWARD SCHOTT



**Harpsichord** (Dutch *klavecimbel*; Fr. *clavecin*; Ger. *Cembalo*, *Clavicimbal*, *Flügel*, *Kielflügel*; It. *cembalo*, *clavicembalo*; Lat. *clavicembalum*; Port. *cravo*; Sp. *clave*, *clavicordio*). A stringed keyboard instrument, classified by Hornbostel and Sachs as a Box ZITHER; it is distinguished from the clavichord and the piano by the fact that its strings are plucked rather than struck, and characterized by an elongated wing shape like that of a grand piano. As in the grand piano, this shape results from the fact that the strings, growing progressively longer from treble to bass, run directly away from the player, in contrast to the oblique stringing of a spinet and the transverse stringing of a virginal. 'Harpsichord' is also used as a generic term (equivalent to Ger. *Kielklavier* or *Kielinstrument*) to include not only the wing-shaped instrument but also other forms such as the CLAVICYTHERIUM, SPINET and VIRGINAL. The earliest known reference to a harpsichord dates from 1397, when a jurist in Padua wrote that a certain Hermann Poll claimed to have invented an instrument called the 'clavicembalum'; and the earliest known representation of a harpsichord is a sculpture in an altarpiece of 1425 from Minden in north-west Germany. The instrument remained in active use up to and throughout the 18th century, not only for the performance of solo keyboard music but also as an essential participant in chamber music, orchestral music and opera; in fact it retained the last of these functions after most solo keyboard music and chamber music involving a keyboard was being composed with the piano in mind. The harpsichord had almost completely fallen into disuse by about 1810; its modern revival dates from the 1880s. For a discussion of the repertory *see* KEYBOARD MUSIC, §IV; *see also* CONTINUO.

In describing keyboards in this dictionary the following conventions have been followed: an oblique stroke (e.g. *C/E*) indicates a SHORT OCTAVE; sequential note-names indicate a missing accidental (e.g. *G′*, *A′* signifies the absence of *G♯′*); the form *D–g″* indicates a fully chromatic sequence between these notes.

1. STRUCTURE. The heart of the harpsichord's mechanism is the jack, a slender slip of wood (replaced by plastic in many modern instruments) which stands resting on the back of the key (fig.1*a*). The top of the jack has a wide vertical slot fitted with a swinging tongue, which in turn carries a plectrum of QUILL, leather, plastic, or, rarely, metal. When the front of a key is depressed, the jack rises, and the plectrum is forced past the string, plucking it (fig.1*b*). When the key is released, the jack falls, the plectrum touches the string (fig.1*c*) and forces the tongue to pivot backward until the plectrum can pass the string, after which a light spring (formerly made of bristle or thin brass but often of plastic) returns the tongue forward into its original position. Meanwhile, a piece of cloth held in a slot next to the tongue makes contact with the string, damping its vibrations and silencing it. A padded bar placed overhead – the jackrail – prevents the jack from flying out of the instrument when the key is struck. In many instruments the jackrail alone limits the vertical motion of the jacks and thereby defines the depth of touch, controlled by a padded rail above the back ends of the keys or below their fronts.

This elegant and simple mechanism, though capable of producing any degree of legato or detachment of notes with great sensitivity cannot produce any appreciable change in loudness in response to a change in the force with which the key is struck, since, regardless of force, the string is displaced virtually the same amount by the plectrum (although a few late 18th-century instruments have an extra set of jacks bearing plectra of soft materials, such as *peau de buffle* (buff leather) permitting some dynamic nuance). Accordingly, the harpsichord can produce conspicuous changes in loudness only if it has devices that can change the degree to which the plectrum extends beyond the string (thereby changing the amount the string is displaced when it is plucked), or if each key has additional jacks and strings that the player may engage or disengage. The second of these options, much the more important, facilitated by the harpsichord's longitudinal stringing, which permits each set of jacks to be placed in a row perpendicular to the strings, with as many rows as desired set one behind another. A set of jacks is engaged (shifted towards the strings) by a lateral

*1. Mechanism of the harpsichord*

movement of the slotted jackslide that supports it; the plectra of the jacks are thus positioned below the strings and will pluck them when the keys are depressed. When the set is disengaged the plectra pass the strings without plucking them.

Although some harpsichords have only a single set of strings and jacks, most have at least two sets with the jacks facing in opposite directions (fig.1*a*). (The strings associated with each key tend to be widely spaced to permit the jacks to pass between them, and the closely spaced pairs of strings on such a harpsichord are not tuned to the same pitch but, rather, to adjacent notes.) This arrangement permits two strings associated with a single key to be placed on a single level; but if there are more than two sets of strings, some must pass the jacks at a different level. Ordinarily no more than two of the sets are tuned to the same pitch. A third set is likely to be tuned an octave above normal pitch; a rare, fourth set an octave below; and a still rarer fifth set two octaves above (As on organs, normal pitch is termed 8′ pitch; an octave higher is 4′; an octave lower 16′; and a pitch two octaves above 8′ is termed 2′ pitch.)

These higher and lower pitches are best sounded by strings proportionally shorter and longer than those sounding 8′ pitch such strings are best arranged on their own bridges with the shorter ones at a lower level and the longer ones at a higher level. On a typical 18th-century harpsichord with two sets of 8′ strings and one set of 4′ strings (known as 2 × 8′, 1× 4′ disposition), the 4′ strings would be at a low level, with the wrest plank (pin-block) bridge or nut near the jacks and close to the edge of the wrest plank, and the bridge on the soundboard at an appropriate distance away. The two 8′ strings would both pass over a separate, higher nut placed further from the edge of the wrest plank and a separate, higher bridge further back on the soundboard. A string plucked near its midpoint will have a more fundamental, flute-like tone than a string plucked near its end, which has a brighter tone, rich in upper partails. Thus each row of jacks yields a distinctive tone quality according to its proximity to the nut. Sometimes there is a special LUTE STOP ('nasal stop') with jacks very close to the nut, the jackslide usually being placed in a separate gap which divides the wrestplank between the 8′ and 4′ nuts.

The 'scale' of an instrument is conventionally measured as the length of the string played by the *c″* key, measuring the longest of the 8′ strings when multiple choirs are present. For comparative purposes, string lengths other than that of c″ may be measured and their measurements converted into their equivalents at *c″*; for example, a measurement of the *c′* string would be halved to determine its *c‴* equivalent. Instruments in which the strings double in length for each lower octave (i.e. with the *c″* equivalent lengths remaining constant) are said to have 'Pythagorean' scaling. Usually, so that the instruments are not impracticably long, only the upper strings have Pythagorean scaling, while the bass strings are 'foreshortened': the *c″* equivalent lengths become progressively shorter toward the lowest note. A typical 18th-century French harpsichord, for example, with a *c″* string about 36 cm long, has *c″* equivalent lengths of about 30 cm at *c* and 15 cm at *F′*. The comparative shortness of the lower strings is compensated for with thicker strings and different stringing materials.

Comparisons of the *c″* scalings of different instruments must take into consideration the possibility of different pitch levels. Thus, if one instrument has a *C″* scale of 36 cm and another a scale of 24 cm, the ratio of 24:36 might suggest that the latter instrument was tuned a 5th higher. Alternatively, different scalings may imply that different stringing materials were used. Iron and brass were both widely used throughout the history of the harpsichord. Iron wire was a hard-drawn, comparatively pure material (without strengthening carbon; i.e. not 'steel' in the modern sense) and brass was of two types depending on the proportions of zinc and copper: 'yellow brass' (about

25–30% zinc) and 'red-brass' (about 10–15% zinc). An ideal string would vibrate such that all its upper partials are precise integral multiples of its fundamental frequency. Since an actual string has a certain stiffness resulting from its thickness and the elasticity of its material, its upper partials are sharp in pitch; in extreme cases the string may sound false. The higher a string is stressed, the purer the upper partials will be. It is generally assumed, therefore, that historical harpsichord makers made their scalings as long as the tensile strength of their wire would permit.

The pitch at which a string of a given length breaks is practically a constant for each material and substantially independent of diameter. The strength contributed by additional thickness is exactly offset by the additional tension necessary to bring a heavier string to the same pitch as a thinner string: the stress remains the same. In fact, because wire gains slightly in hardness and tensile strength as it is drawn thinner, a thinner string can be tuned to a slightly higher pitch than a thicker string of the same material and length.

Since tensile strength of iron is greater than that of yellow brass, their scalings differ. Instruments at normal 8′ pitch (*a′* about 415) may be strung in iron with *c″* about 35·5 cm long, or in yellow brass with *c″* about 28·5 cm. Because the modulus of elasticity of yellow brass is about half that of iron, its tone quality is acceptable despite short scaling. Instruments scaled for iron in the treble are usually markedly foreshortened, with yellow brass in the lower part of the compass and often, red brass, which has an even lower tensile strength and modulus of elasticity, for the lowest notes. With extreme foreshortening or for the very short scalings found in some 16′ choirs, overspun strings may be used. Modern harpsichords occasionally have *c″* scalings greater than 40 cm, intended for steel strings.

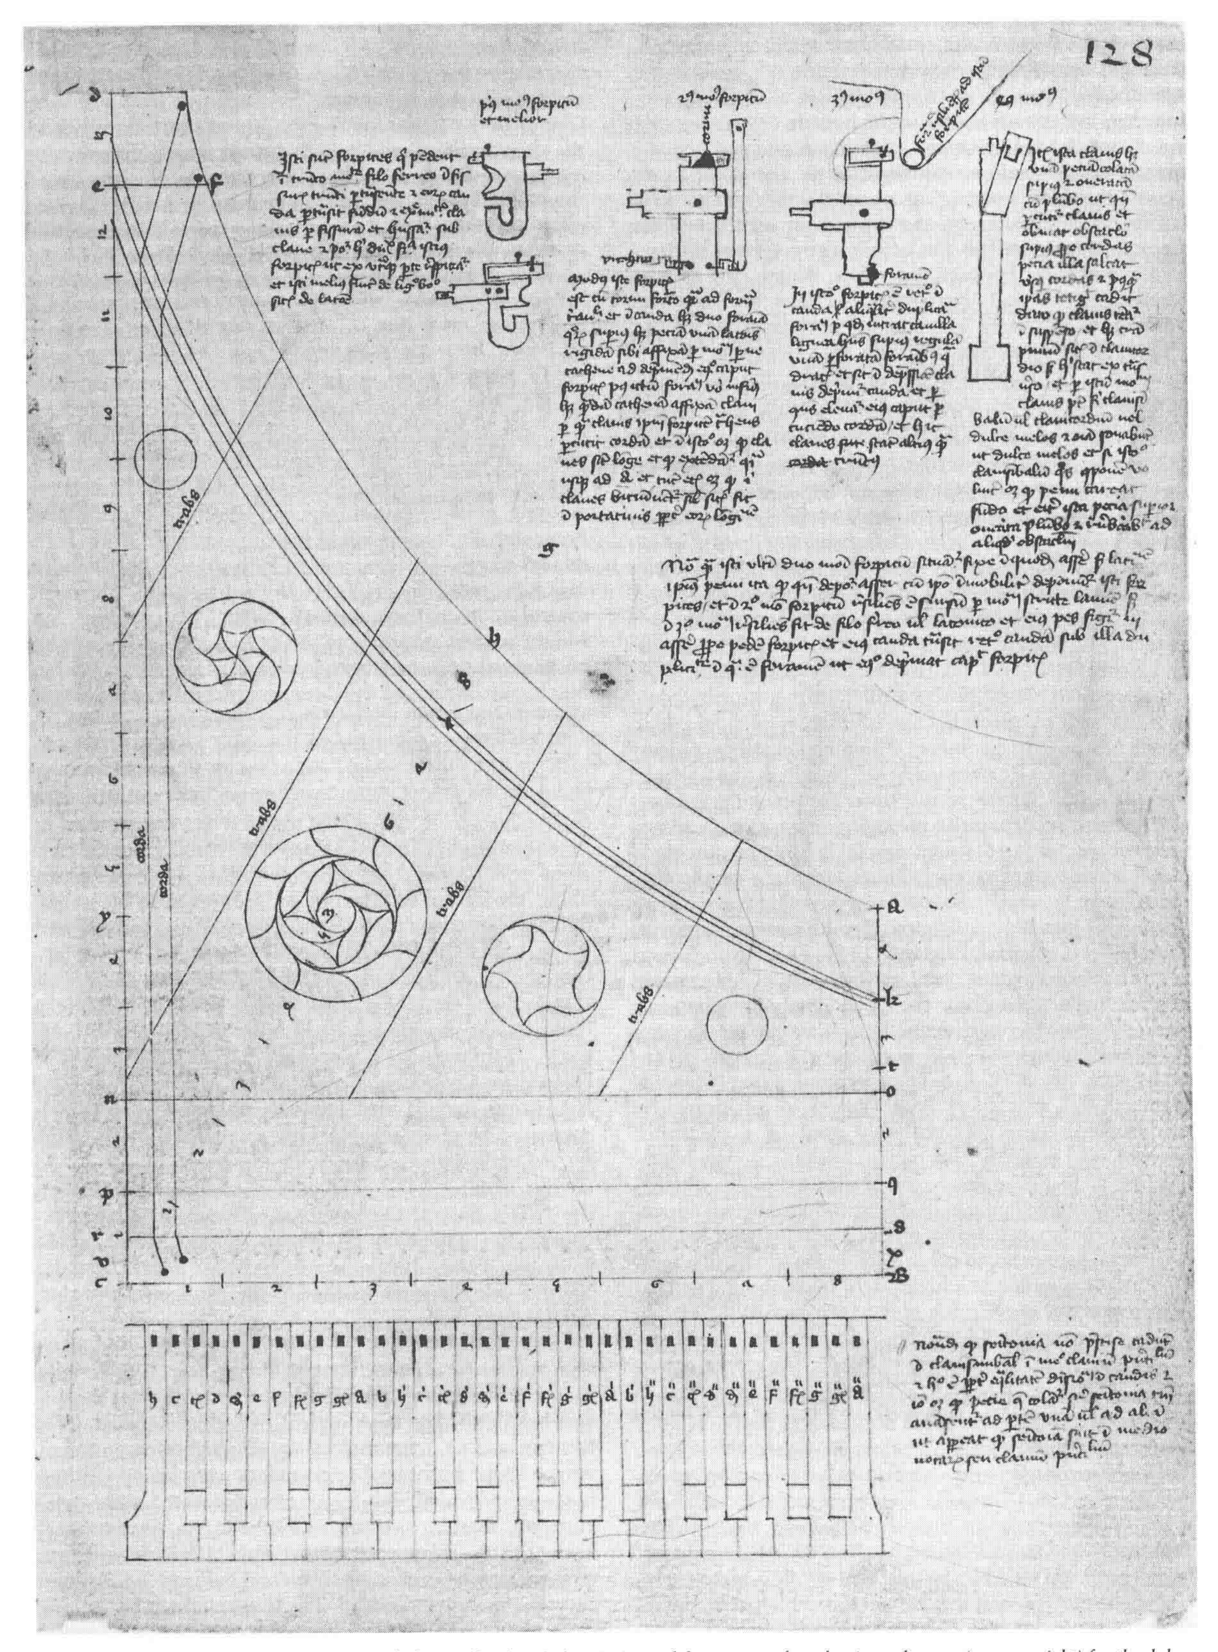
While the historical use of two basic scalings, one for iron, the other for brass, has been firmly established, some latitude must be admitted. Wire from different sources may have varied in tensile strength; makers may have adopted different margins of safety; instruments intended for thinner strings may have been made with longer scales; and makers may have planned scalings in integral numbers of local units of measurement, which varied from place to place. Further, some evidence suggests that in certain traditions another scaling system, with iron *c″* strings about 32 cm long, was occasionally employed.

The relatively rare harpsichords with three sets of 8′ strings carry them at two different levels where they pass the jacks. This is sometimes accomplished by using two bridges, with two shorter strings of brass on one bridge and one longer set of iron strings on another, all tuned to the same pitch. Otherwise either a stepped nut or two separate nuts are used; however, since the separation of levels is required only where the strings pass the jacks, a single bridge without a step may be used on the soundboard. On instruments with 1 × 8′, 1 × 4′ dispostion, each set passes over its own bridge and nut, with the 4′ strings on a lower level. The hitch-pins for the 4′ strings (in the front part of the wrest plank and in the case lining respectively) the 4′ strings would have to pass through the 8′ nut and bridge, and the inordinate length of unused 4′ string beyond the 4′ bridge would tend to make the 4′ strings go out of tune easily. Accordingly, the tuning pins for the 4′ strings are usually placed between the 8′ and 4′ nuts. Italian 16th-century harpsichords, however, had the 8′ and 4′ tuning pins together. 4′ hitch-pins are driven into the soundboard between the 4′ and 8′ bridges. A strengthening bar of 4′ hitch-pin rail is usually glued to the underside of the soundboard to withstand the string tension on the 4′ hitch-pins. This bar also divides the soundboard into two areas; one, lying between 4′ hitch-pin rail and the curved side of the case, serves the 8′ strings while the other, between the 4′ hitch-pin rail and (usually) an oblique cut-off bar, serves the 4′ strings. The triangular area of the soundboard to the left of the cut-off bar is generally stiffened by transverse ribs. In some traditions there are no cut-off bars, and ribs may cross under the bridges.

A harpsichord case consists of five basic parts. Clockwise from the player's left, these are: the spine, the long straight side at the left; the tail, a short straight piece at an acute angle to the spine; the bentside, a curving section running more or less parallel to the bridge (occasionally the bentside and tail are combined in a single S-shaped piece, yielding a curved tail rather like that of a modern grand piano); the cheekpiece, a short straight piece at the player's right; and the bottom, which on all harpsichords from the 16th century to the 18th is a solid piece of wood that closes the instrument and thereby performs both a structural and an acoustical function. In some instruments (including all historical Italian harpsichords) the walls are attached to the edges of the bottom, while in others (as made by most north European makers) the walls are assembled first and the bottom is applied to the lower edge. The ends of the case that protrude on either side of the keyboard, from the spine on the left and the cheekpiece on the right, are known as the 'cheeks'. The wrest plank is set between the cheekpiece and the spine, with space below it for the keyboard. Occasionally, the wrest plank is quite narrow, such that the thin layer of wood with which it is covered functions as a supplementary soundboard under the nuts. There is a space for the jackslide between the wrest plank and the belly rail (or header), a transverse member which is sometimes divided into separate upper and lower parts, with the lower part set behind the upper one to leave room for the keys to extend beyond the jacks and reach the slotted rack by which they are usually guided at the back. The upper surface of the belly rail supports the front edge of the soundboard, the other edges of which rest on liners glued to the inside of the spine, tail, bentside and cheekpiece; the 8′ hitch-pins are driven into the liners along the tail and bentside. In some traditions the case walls are very thin, and the delicate instrument is kept within a thick-walled outer case. This separate 'inner-outer' style was sometimes simulated by 'false-inner-outer' construction, in which veneer and mouldings applied to the inside of thick walls mimic the appearance of a separate inner instrument.

Although the total string tension in a harpsichord is substantially less than that of a piano, it is nevertheless a considerable load on the wooden structure, especially where two or three strings are provided for each note. The cases of historical instruments are braced by numerous methods, all with the same function: to prevent the bentside, tail and wrest plank from collapsing inwards under the pull of the strings. There are four basic components, used alone or in combination. Bottom braces are occasionally very light pieces, similar to soundboard ribs, intended to stiffen the bottom board; more typically they are about 8 to 10 cm high, with their ends butted

against the bentside and spine. Knees are triangular blocks glued to the bottom and to the case walls or belly rail. Diagonal struts have their upper ends set against the soundboard liners or the upper portion of the belly rail, and their lower ends toed into the bottom or occasionally into a bottom brace. Upper struts have one end bearing against the bentside or tail liner, while the other bears against the spine liner or the upper portion of the belly rail. In some insruments, the inward force of the wrest plank is transmitted to the belly rail by several narrow 'gap spacers' set between the jacks. A few exceptional surviving historical harpsichords have no internal framing. Many early instruments were restrung in the 19th century more heavily than was desirable, which resulted in wrenched-out wrest planks and collapsed soundboards. Some modern harpsichords have metal frames similar to those in pianos.



2. THE RENAISSANCE. 15th-century representations of harpsichords from various parts of western Europe generally show short instruments with thick cases. Some do not appear to have a jackrail and may not have worked by means of the standard jacks described in §1 above. Instead they may have had one of the actions described and illustrated in the manuscript treatise of HENRI ARNAUT DE ZWOLLE (fig.2). Arnaut called his harpsichord the 'clavisimbalum'. His design probably partly describes actual constructional practice of the time; he may also have wished to give the *clavisimbalum* a theoretical foundation based in geometry. This mixture of approaches resulted in some inconsistencies. The design shows four types of action. The first and third are plucking mechanisms which incorporate a swinging tongue that carries the plectrum, as in 16th-century jacks; however, the part carrying the tongue is hung on an axle in a slot in the wrestplank (first type) or is a large pivoting lever (third type). The small harpsichord played by an angel in Manchester Cathedral, England (1465–8), is a convincing example of this type of jack action without a covering jackrail. It is not clear how the second type of mechanism works; the fourth (used in the DULCE MELOS) strikes an undamped string and was a forerunner of the piano mechanism. Three of Arnaut's mechanisms are without dampers; this may have been typical of 15th-century actions. Bird quill was probably used as a plectrum material, and possibly also metal. Arnaut's design has a compass of *B–a″* and can be made with either one or two registers of strings; unusually, the second is aligned above the first, the strings being plucked successively by the same jack. Arnaut's and other 15th-century harpsichords would have sounded at a high pitch, from about a 4th to an octave above the 8′ pitch of the 16th century.

*(i) Italy.* Although no 15th-century Italian harpsichords or representations of them are known to have survived, it has been shown that Italian instrument makers were building harpsichord by 1452 at the latest (Esch, 1979). Documents, manuscripts of Italian keyboard music (including organ music) and intarsias suggest that a compass of *FGA–g″a″* (or *–c‴* or *–f‴*) was in use in the second half of the 15th century. An intarsia of around 1520 in the choir-stalls of Genoa Cathedral shows a single-register harpsichord with a compass of *FGA–g″*. Given the early date of the intarsia and the compass, it is plausible that it also represents the type of harpsichord made in the late 15th century. It has a bentside with two curves, a feature otherwise known only in virginals.

Of all the harpsichords known to survive from the period before 1590, 45 are Italian – a greater number than from any other region. Although there were some stylistic differences between harpsichords from different towns on the Italian peninsula, broad similarities justify the term 'Italian', even though there was no political unity on the peninsula until the 19th century. Slightly more than half of the surviving 16th-century harpsichords were made in Venice. Guild regulations were less restrictive there than in some places (e.g. Germany). To judge by the number of Venetian instruments that made their way to other parts of Italy, the reputation of Venetian makers was considerable. Alfonso II d'Este of Ferrara had at least six Venetian harpsichords, and Raimund Fugger (1528–69) in Augsburg had five. More 16th-century string keyboard instruments survive by Domenico da Pesaro, who was active in Venice, than by any other maker, and seven of his 15 extant original instruments are harpsichords. Also in Venice, Alessandro and Vito Trasuntino enjoyed good reputations, and Baffo, Celestini and Francesco Padovano made instruments that show high quality work. Most evidence of 16th-century harpsichord making comes from Venetian instruments. Although several 16th-century virginals from Milan survive, no Milanese harpsichord from this period is known. A group of harpsichords has been recognized as coming from Naples, an important 16th-century musical centre. Harpsichords from Florence and Rome also survive.

The characteristically slender case shape of Italian instruments results partly from the practice of doubling the string length at each octave down to *f* (sometimes to *c*), but also from the use of longer bass strings than in other traditions. The case sides were usually not so deep as in instruments from other countries. Little is known about the design and layout procedures used by Italian makers. The string lines, plucking points and nuts (8′ and 4′) were sometimes marked on the baseboard, but the fact that such marks are usually lacking suggests the use of standardized designs and templates. Some 15th-century design traditions survived well into the 16th-century. An early 16th-century Neapolitan harpsichord (no.175, Donaldson Collection, Royal College of Music, London) has string lengths that double at each octave when measured between the plucking points and bridge; this system corresponds to the design described by Arnaut de Zwolle around 1440. The case proportions (excluding the visible part of the keyboard) of two octave harpsichords by Domenico da Pesaro (1543, Musée de la Musique, Paris; 1546, Gesellschaft der Musikfreunde, Vienna) are the same as that of the *clavisimbalum* that Arnaut described.

Harpsichord case-slides were usually thin (4–6 mm) and made of cypress, although maple was occasionally used, particularly in Naples. Elegant mouldings at the top and bottom of the case, typical of Italian harpsichords, have proved an important means of attributing unsigned work. These thin-cased instruments were rarely painted but were provided with a separate, decorated outer case, and are therefore often referred to as 'inner-outer' harpsichords. Supports for outer cases survive in a variety of forms, some with simple, turned baluster legs, others carved, painted and gilded. The thin cheeks at either side of the keyboard were reinforced by gluing on a second piece of wood as thick as the case; these were then cut to scroll or other shapes, never being being left square or

*2. Henri Arnaut de Zwolle's plan drawing of a harpsichord with descriptions of three types of mechanism, plus one (extreme right) for the dulce melos, c1440 (F-Pn Lat.7295v, f.128r)*

slanted. Inlaid stripes of contrasting colours, forming geometrical patterns of Arab origin, were used on the nameboard and the inside case above the soundboard in the best Venetian instruments. Fine examples are the 1574 Baffo (Victoria and Albert Museum, London) and an unsigned harpsichord (no.1883.718, Kunstgewerbemuseum, Schloss Köpenick, Berlin). The nameboard, made of wood as thin as the case and removable, was sometimes panelled with mouldings. The maker's name, if it appeared, was usually in small Roman capital letters. Internal bracing usually comprised two to three stiffening rails nailed and glued to the bottom boards; triangular blocks (called knees) maintained the sides perpendicular to the bottom boards. One to three knees on the spine side and five to seven on the bentside was a common arrangement. Since the case sides were thin they were glued to the sides of the baseboard for rigidity, rather than to the top surface of the baseboard as in other countries. In a few south Italian (probably Neapolitan) instruments the baseboard is about 5 mm above the bottom edge of the case sides, presumably so that it is freer to vibrate. Diagonal struts from the bentside liner to the bottom boards were also used, either with knees or, in some Venetian harpsichords, as the only support for the sides. A decorative rose was often set into the soundboard, made usually of three or four layers of thin wood veneer or sometimes of parchment, in gothic or geometrical designs. A few instruments had three or four roses, echoeing illustrations of 15th-century harpsichords from elsewhere in Europe and Arnaut de Zwolle's manuscript.

Keyboards were usually made of quartered beech; maple was used in some south Italian harpsichords. The end of the key-lever was guided by a wooden tongue in a vertical slot on the rack. The travel of the keys was arrested by cloth padding on the front key-frame rail or by the jacks reaching the padding on the jackrail, or probably sometimes by a combination of the two. Although no unaltered action survives, the amount of sharp projecting above the natural-key covers indicates a fairly shallow depth of touch (5–6 mm) in many instruments. The natural keys were usually covered with boxwood, or with ivory in especially fine instruments; only rarely were dark woods such as ebony used. Sharp keys were normally made of black-stained pear wood topped with a thin slip of ebony.

Italian jacks were usually of a pear-like wood and about 5 mm thick, thicker than those used in other countries, adding weight to compensate for their short length. Small springs of flat brass strip were used rather than boar-bristle. The centrally-placed tongue enabled a damper slot to be cut on both sides. Most instruments had quill plectra and a one-piece boxslide about 2·5 to 5 cm deep. These were often made by gluing small blocks of wood to a thin strip, with the correct spacing for the thickness of the jacks, and then gluing another strip on the open side. The jackrail was usually decorated with the same mouldings as employed on the case. To hold it in place, slotted blocks were glued to the inside of the case. Many harpsichords (mostly from Venice) had the line of the jacks running not at 90° to the long side, but at such an angle that the jackslides were nearer the front of the instrument at the treble end. Makers may have chosen this arrangement because it reduces the amount of curve in the bentside (if other factors of scaling and plucking points are unchanged).

Many 16th-century harpsichords have cypress soundboards, usually made of quartered timber, but spruce and what appears to be fir were also used. Maple, whose mechanical characteristics are similar to those of cypress, appears in some Neapolitan harpsichords. Cypress was frequently used for the bridge when the soundboard was of cypress; walnut and beech were also employed. The bridges were always parallel-sided with a moulding on the top edge; the cross-section was normally smaller than in instruments from other countries. The height of the bridge was usually reduced towards the treble. Double-pinning with a high hitch-pin rail was not used in 16th-century Italian harpsichords. Instead of the sawn or bent curve of the bridge in the bass found in other countries, Italian harpsichords usually had a small piece mitred at an angle to the main bridge for the last few notes. Nuts were usually of the same material and finished to the same dimensions as the bridge, which has enabled the detection of many later alterations. They were either fixed on a straight line, or in a curve with its inside facing the jacks. A curve in the opposite direction results from later shortening of the strings. With the scales and plucking points chosen by Italian makers, the two nuts in a 1 × 8′, 1 × 4′ disposition lay quite close to each other, making it impractical to locate the 4′ tuning pins between the 4′ and 8′ nuts (the commonest practice outside Italy). Instead, holes were drilled through the 8′ nut so that the 4′ strings could reach their tuning pins at the edge of the wrestplank. One of the few harpsichords of this type to have retained its original 8′ nut is by Francesco Padovino (1561; Deutsches Museum, Munich). The 4′ hitch-pins were sometimes simply driven into the soundboard and secured with a drop of glue. This practice is only possible with a relatively dense wood such as cypress (not with spruce or fir), but thin 4′ hitch-pin rails glued to the soundboard were also used. The 8′ strings were hitched to the soundboard liner in the conventional way.

The nut was placed on (or near) solid timber in all known 16th-century harpsichords and does not contribute to the audible vibrations. Some earlier sources incorrectly interpreted the cypress veneer (*c*6 mm thick) which is often found on wrestplanks as being an additional soundboard.

Ribbing systems have been found with three or four cross-bars running at an angle from the spine towards the front of the instrument and crossing under the bridge, where they are usually undercut to leave the soundboard free. Others have a cut-off bar, with or without additional crossbars. Some harpsichords seem to have been made without any bars at all. The impossibility of access to the insides of many instruments makes it difficult to establish how rigidly makers followed these systems; exceptions can be found. These barring systems are found in Italian harpsichords from the 16th century to the 18th; no feature can be categorically assigned to one period, and no specific conclusions can be drawn about the sound of a harpsichord simply from the type of barring used.

The point at which a string is plucked is important in determining the character of the instrument's sound. When the plucking point is near the nut (close plucking) the sound is nasal; nearer the middle of the string (centre plucking) it is rounder. In Italian harpsichords of all periods the plucking point of the back 8′ register (furthest

*3. Harpsichord by Vincentius, 1515–16 (Accademia Musicale Chigiana, Siena)*

from the player) lay at close to a third of the string length at *c″*. At the extreme treble the plucking point was nearer the middle of the string. In the bass the plucking point was, in order to avoid over-long of key lengths, relatively close to the nut. Italian harpsichords with a 1 × 8′, 1 × 4′ disposition had the 8' in the back register with the jacks plucking to the left. 21 examples of this disposition are known from before 1600. A comparison between this arrangement and that of Ruckers's harpsichords (see §3(i) below) reveals a basic difference of design, and hence of sound: Ruckers harpsichords have the 8′ plucking to the right and in the front register, giving a more nasal sound. The Italian harpsichord is a little sweeter, and in 1 × 8′ instruments the 8′ register was generally in the same position and had the same plucking point as in the disposition with 8′ and 4′.

Italian harpsichords are typically described as having a bold sound with a more pronounced attack than in other harpsichords, but this judgement has chiefly arisen from listening to brass-strung 17th- or 18th-century harpsichords. Since practically every 16th-century Italian harpsichord has been modified in some way that affects tone, even the few playable examples are not a reliable guide to how these instruments would originally have sounded. Moreover, most 16th-century harpsichords were intended for iron stringing (see below); iron-strung instruments tend to have a more brilliant sound with a longer decay time than brass-strung ones. Because the majority of the harpsichords that survive from before 1600 were made in Venice, with only a few from elsewhere in Italy, it is not possible to generalize about regional differences harpsichord tone.

Although a number of 16th-century harpsichords now have two 8′ registers, many of them have had a register added to what was originally a 1 × 8′ disposition. An example is the harpsichord of 1521 by Jerome of Bologna (Victoria and Albert Museum, London; *see* HIERONYMUS BONONIENSIS), previously thought to be the oldest surviving harpsichord. This status is now held by an instrument (fig.3) inscribed as being started on 18 September 1515 by Vincentius. It too probably had a single 8′ register, with a compass of *FGA–g‴a‴* or perhaps *C/E–f‴*. Since the majority of 1 × 8′, 1 × 4′ harpsichords were built in Venice the 4′ stop might appear to be a Venetian invention, but the paucity of evidence from other towns imposes caution. In any case, given the prevalence of 15th-century instruments at 4′ pitch it may be more accurate to say that an 8′ stop was added. Many 16th-century Venetian harpsichords had their 1 × 8′, 1 × 4′ dispositions altered to 2 × 8′ after about 1630 (see §3(iv) below). The 1574 Baffo is one such instrument. Later scholarship recognized that of 50 harpsichords known from before 1600 only eight were made with two 8′ registers and nine with a single 8′ register. The earliest dated 2 × 8′ specification was built by Domenico da Pesaro in 1570. It is likely that the four 'gravicembali doppi' used in Florence in 1565 at the wedding celebrations for Francesco I de' Medici were 2 × 8′ harpsichords. The earliest known 2 × 8′ harpsichord ('Bortolus') was probably made in the 1540s for the court of Ercole II d'Este, Duke of Ferrara. An unusual type of 2

× 8′ harpsichord had the jacks facing each other on either side of a narrow-spaced (3 mm) pair of strings (e.g. Celestini, 1569; Royal Ontario Museum, Toronto). This required an unsual S-shaped end to the key levers. Both registers had strings of almost identical length; the system may have been intended to improve tuning stability (Wraight, H1993; Lee, A1996 and A1997). Although many instruments were built in the 15th century at 4′ pitch, only two 16th-century octave harpsichords are known, both made by Domenico da Pesaro (mentioned above).

A discussion of compasses must take into account the alterations that obscure the original condition of many instruments, first noted by Barnes (in Ripin, A1971). Only one of the known 16th-century Italian harpsichords has not had its compass, disposition or scale altered (Wraight, H1997). The compasses described here as the original ones are mostly not the present ones. Around 1500, harpsichord compasses probably still began with *FGA*, that is, lacking *F♯* and *G♯*. These compasses may have reached as high as *f‴*, as in the Urbino intarsia clavichord of around 1476 (*see* CLAVICHORD, fig.3), or only to *a″* (probably without *g♯″*) or *c‴*. An intarsia of a virginal (probably made in 1496 by Lorenzo da Pavia) in the *grotta* of Isabella d'Este's study in Mantua shows a compass of *C/E–c‴*, which could also have been used for harpsichords at this time. In the 16th century the most common compass for harpsichords or virginals was *C/E–f‴*. The *C/E–c‴* compass was used in only a third of surviving harpsichords. An early harpsichord with an exceptionally wide range and low pitch is the 1579 Baffo (Musée de la Musique, Paris), which originally had a compass of *C/E–c⁗*, although the sounding range was *G′–g‴*. Chromatic bass octaves were apparently not used before 1600 and were rare thereafter. It is unlikely that harpsichords were made with a compass of *G′/B′–c‴* before 1600, although several instruments, previously *C/E–f‴*, were later modified to this range (e.g. the 1574 Baffo in fig.4). A compass of *G′/A′–c‴* was known from the 1630s and was common towards the end of the 17th century, but probably was not used in the 16th century. The inventory of Medici instruments dated 1700 lists a harpsichord of 1538 made by Domenico da Pesaro with a 50-note compass of *G′/A′–a″*, but this may have been the result of an alteration of a 50-note *C/E–f‴* compass.

Temperaments of the 15th century to the 17th (*see* TEMPERAMENTS, §§1–5) often gave chromatic notes that were not enharmonically equivalent (e.g. G♯ or A♭, which were not at the same pitch); to provide keyboards with the missing notes, extra chromatic keys (usually D♯ and A♭) were sometimes added. This practice seems to have originated in Italy, where organs were furnished with at least one split key in some octaves as early as 1468 (Wraight and Stembridge, H1994). Although there was interest in this approach in other countries, such keyboards are mostly found in Italian harpsichords and virginals beginning about 1620 (see also §3(iv) below). The earliest surviving harpsichord made with split keys for D♯/E♭ and G♯/A♭ was built for the court of Alfonso II d'Este at Ferrara around 1570 (no.1883.718, Kunstgewerbe Museum, Schloss Köpenick, Berlin). For discussion of the most important experiments with enharmonic keyboards, *see* ENHARMONIC KEYBOARD.

Detailed studies to determine the original pitches of Italian harpsichords began in the 1960s. Knowledge of these original pitches may help to define the harpsichord's role in the musical life of the period; pitch is also related to the type of string material used (usually brass or iron), which has a significant effect on tone. The alterations that have been made to surviving instruments have tended to complicate discussions about pitch. Italian string lengths in virginals and harpsichords ranged from about 15 cm to 42 cm measured at *c″* (the short end of this range being mostly small virginals), but the usual range for 8′ instruments was about 25·5 cm to 36 cm. Thomas and Rhodes (A1967) suggested that iron wire, which permits a higher pitch, was used for instruments with longer scales and brass for those with shorter ones; Barnes (1968; in Ripin, A1971; Barnes, H1971) argued that brass wire was used for all instruments and that pitches varied among instruments in proportion with string lengths. Later scholarship gave better data about the original scales of many instruments. It might at first appear that the wide range of string lengths among instruments allowed for considerable latitude of pitch, particularly because it is possible to tune a string over a range of pitches below its breaking point and still produce an acceptable tone. Wraight's work (1997), however, suggests that among 16th-century instrument makers in Venice (where the majority of surviving instruments were made) two different 8′ pitches a tone apart were in general use, the higher at a′ = *c*520, and that most 8′ instruments were designed to conform to one or the other. It appears that these makers regularly and accurately used the same scales, with closely defined string lengths; there was agreement on this not only within individual workshops but among different makers. Some later modifications to 16th-century instruments show that makers considered it desirable to alter the scale of an instrument even when changing its pitch by only a semitone.

There is clear evidence that 18th-century makers such as Cristofori, Ferrini and Giuseppe Solfanelli used both iron and brass wire to string their instruments, and that a ratio of nearly 5:6 for the lengths of brass wire and iron wire at the same pitch was consistently employed (O'Brien, A1981, and Wraight, H1997). The range of scales found before 1600 would seem also to allow for the use of either brass or iron wire, and documentary sources establish that both were used; the problem is to identify the stringing material for each individual instrument. In general, 16th-century Italian instrument makers seem to have preferred iron strings regardless of instrument type, size or compass; in any case, the stringing material of chamber keyboard instruments in this period was not exclusively linked to compass or scale. Most 16th-century harpsichords originally had *c″* at about 30 to 35 cm – relatively long in comparison to virginals of the period. Many of these instruments had a 4′ stop and a compass of *C/E–f‴* available evidence indicates that both harpsichords and virginals with scales of this length were intended for iron strings. Galilei, in his *Dialogo della musica antica e della moderna* (1581), suggested that the 'gravicembalo' had iron strings in the treble and brass in the bass, although he did not specify how far into the bass the iron stringing extended. The scale design of these harpsichords would require brass wire only for the last few notes and implies that iron-strung, long-scaled harpsichords would have stood at normal 8′ pitch. (The name *gravicembalo* does not, as it might appear, indicate a low-pitched instrument at this period; it might originally

*4. Plan and side views of harpsichord by Hans Müller, Leipzig, 1537 (Museo Nazionale degli Strumenti Musicali, Rome)*

– around 1500 – have meant a harpsichord at 8′ pitch as compared to the prevailing 4′ pitch of chamber keyboard instruments of the time.)

A few harpsichords have a scale with *c″* at about 30 cm, but are without a 4′ stop and have compasses that do not reach to *f‴*. The Italian tradition of scale design indicates that these were also intended for iron strings; like virginals with the same scale length, they were pitched a tone above those instruments where *c″* is at 35 cm. Some harpsichords with very long scales, *c″* being at 41 to 47 cm (e.g. the instruments by Baffo, 1574 and 1579, and Francesco Padovano, 1561, mentioned above), would have been pitched a 4th lower than those with *c″* at 30 to 35 cm even if strung with iron wire. Harpsichords with short scales, where *c″* is at 27 to 29 cm, might at first appear to be intended for brass wire at normal 8′ pitch. Wraight's analysis of the scale design, including the bass strings, implies that all such instruments were probably intended for the higher 8′ pitch (*a′*=*c*520) with iron wire. Examples are the 1521 Hieronymus Bononiensis instrument (discussed above) and the 'Rigunni', probably of 1584 (Stearns Collection, Ann Arbor, Michigan). There seem to be a few harpsichords that were pitched a 4th above normal 8′ pitch if iron stringing is assumed (e.g. Celestini, 1608, Museum für Kunst und Gewerbe, Hamburg; Celestini, 1596, Royal Ontario Museum, Toronto). Octave pitch, for example in the harpsichords of 1543 and 1546 made by Domenico da Pesaro, was the highest pitch in normal use in the 16th century.

The coordination and standardization in scale length among Renaissance harpsichord makers in Venice need not imply that performance pitch was as well organized; there were enough intermediate sizes of instrument that pitch incompatibilities in performance could easily have arisen. A striking feature of many Renaissance Italian compasses is that they end on either *c‴* or *f‴*. Some scholars of the 1960s linked this with scaling, suggesting that harpsichords and virginals ending at *f‴* tended to have longer scales and were pitched a 4th lower than those ending at *c‴*. It now seems more probable, however, that most of these instruments sounded at normal 8′ pitch and that the compass ending on *f‴* simply reflects the Italian tradition of extending the musical range only in steps of a 4th (or 5th) and much less frequently by individual notes (e.g. from *c‴* to *d‴*). The high *f‴*, sounding a high pitch, would have facilitated the performance of music at octave pitch (printed music rarely went into this range).

*(ii) Northern Europe.* 15th-century documentary evidence suggests that string keyboard instruments were first developed in northern Europe, and the oldest surviving plucked string keyboard instrument, a CLAVICYTHERIUM of around 1480 (London, Royal College of Music), was made in Germany. Most surviving 16th-century string keyboard instruments, however, are Italian; and the earliest known from northern Europe, a harpsichord made by Hans Müller in Leipzig in 1537 (Museo degli Strumenti Musicali, Rome; fig.5) and a virginal made by Joes Karest in Antwerp in 1548 (Instruments Museum, Brussels conservatory; for illustration *see* VIRGINAL, fig.2), share many characteristics of Italian instruments made

decades earlier, such as thin case sides surrounded by applied mouldings. It was thought (Ripin, A1971) that the style of Müller and Karest was derived from Italian models, but it now seems more likely that 16th-century Italian harpsichord-making traditions had origins in 15th-century north European practices. The German clavicytherium of around 1480, which except for its upright form probably resembles a normal harpsichord of the period, anticipates several characteristics of 16th-century Italian harpsichords: thin case sides attached to the edges of the bottom board (the back in the clavicytherium), scrolled cheeks, a very acute angle at the tail and a separate outer case. The clavicytherium also resembles the *clavisimbalum* described by Arnaut de Zwolle around 1440 (fig.2 above): both had non-Pythagorean scaling (see §1 above), a relatively shallow space (5 cm in the clavicytherium) between the soundboard and the bottom board (which was also placed above the keyboard in one of Arnaut's designs), and multiple roses in the soundboard. The lower guide in the instruments of Müller and Karest, consisting of a thin plate of wood covering the entire area over the portion of the keyboard behind the nameboard, may be a vestige of the *clavisimbalum*'s bottom board, while Müller's key-guiding system, with the distal end of the key lever forked for a vertical pin held by the back rail, is the same as that in the clavicytherium. Karest's instruments have multiple roses and use the proportions that Arnaut specified for his clavichord. The simplest explanation for these and other correspondences is that 16th-century traditions in both Italy and northern Europe were separate branches of an earlier northern tradition. This does not, of course, preclude the possibility of subsequent Italian influences on Northern practice.

Of a small number of surviving 16th-century keyboard instruments from northern Europe, about 20 are virginals; only two securely dated before 1590 are harpsichords. Documentary sources are scant, and north European depictions of harpsichords are rare compared to representations of clavichords and virginals. It is evident, however, that the major traditions of north European harpsichord making became firmly established during the 16th century, although knowledge about such details as string scaling and case construction must be derived primarily from virginals. The Müller harpsichord of 1537 was made in a style distinct from that of Italy. The bottom board is only 8 mm thick; it is attached to the lower edges of the sides, which are 7 to 8 mm thick and of softwood veneered with Hungarian ash. The soundboard extends to the nameboard and has a separate mortise to guide each jack. Because the wrest plank is only about 5 cm wide, the nut is on active soundboard. Some details of the original disposition and scaling are obscured by later alterations. It was certainly made with two sets of strings and three registers, one of them a nasal (lute stop) very close to the nut. The original stop-changing mechanism (probably consisting of movable lower registers placed in oversized mortises in the lower guide) is missing, but there are holes for knobs to project through the cheek, including one probably for an ARPICHORDUM STOP. The keyboard, originally *C*, *D* to *g″*, *a″*, could be shifted to change the sounding pitch by a whole tone (*see* TRANSPOSING KEYBOARD). There appear to have been two bridges and two sets of strings a 4th apart (Koster, F1996). Müller's scaling is foreshortened in the bass, more like that of 15th-century instruments than the typical Italian harpsichord scaling, which is Pythagorean almost to the lowest note. The foreshortened scaling may imply the use of iron strings in the treble and brass in the bass; it is also related to the reverse curve of the bridge in the bass and the straightness of the bentside from its midpoint to the tail. The ungainliness of the instrument's outline in comparison with Italian harpsichords, however, arises largely from the added width (about 7·5 cm) required by the shifting keyboard and the short length associated with scaling for a high pitch.

Like the Müller harpsichord, the two surviving virginals made by Karest (1548 and 1550) have moderately thin case sides outlined with applied mouldings, a plate-like lower guide and foreshortened scaling. Although their absolute pitch levels are disputable, the instrument of 1550 is the larger and was probably tuned a 4th lower than the other (the *f″* string in the larger instrument being roughly the same length as the *c″* in the smaller). Karest and Müller may have applied the putative archaic principle that string lengths, at least in the treble, should be equivalent to the speaking lengths of organ pipes of the same pitch; that is, they may have used low-stress iron scalings, so that an instrument tuned to normal 8′ pitch would have a *c″* string of about 32 cm. Karest's 1548 virginal would thus have sounded approximately a semitone above modern pitch. Some later German and Austrian instruments, stylistically similar to Müller's and Karest's, used such scalings (Kukelka, F1994).

Except for instruments made in the Low Countries after about 1575, most north European harpsichord making before the 18th century has stylistic affinities with Müller's and Karest's works. There is documentary evidence that instruments by Karest and other Antwerp makers were sent to Germany during the 16th century, which may have transmitted some of their traditions; or Müller's and Karest's instruments may simply represent a style that emerged gradually throughout northern Europe, spread partly perhaps by organ builders, who were necessarily itinerant and who also made string keyboard instruments. The term 'international style' has been applied to this group of tendencies and techniques, which include relatively thin case sides, plate-like lower guides, nuts placed on resonant soundboard, light 4′ hitch-pin rails, foreshortened scalings and provision for a variety of tone colours. Although most surviving harpsichords made in this tradition, which extended from France to Sweden and from England to Austria, date from after 1600, a widespread inclination to make complex instruments is evident in early inventories. The 1566 Fugger inventory (see Smith, C1980), for example, includes an English harpsichord with several registers, an instrument made in Cologne with two keyboards for two performers, and one from the Netherlands with four keyboards for four performers.

Virginals made in Antwerp around 1580 by Hans Bos, Hans Ruckers, Karest and others show that they experimented with different systems of iron-string scaling in the upper register, while the system of brass scaling for the lower strings may be assumed to have remained constant. Also in Antwerp around the same time, muselars and spinetten were undergoing developments in layout and internal construction. Unfortunately, no well-preserved Antwerp harpsichords survive from this period, when harpsichord making presumably underwent analogous developments. Some idea of a transitional style of the

1560s, however, is provided by a harpsichord made in London in 1579 by Lodewijk Theeus (ii), who became a member of the Antwerp Guild in 1561 but had emigrated to London by 1568. Although some of its features, such as the use of oak for the case, the chromatic compass in the bass and perhaps the 2 × 8′, 1 × 4′ disposition, may be regarded as English, others presumably reflect the Antwerp style of the mid-1560s. As in the Müller harpsichord, the rear portion of the bentside is straight and the soundboard, mortised to serve as an upper guide for the jacks, extends to the nameboard, so that the nuts are on active soundboard. Because the wrest plank is narrow, the 4′ wrest pins are grouped with the 8′ pins, and the 4′ strings pass through holes in the 8′ nut. The case sides are about 13·5 mm thick, and the lid is hinged to the spine. Mouldings applied to the interior of the walls give the illusion of a thin-cased inner instrument inside a massive outer case. The scaling, with the longer of the two *c″* strings about 35·6 cm, is foreshortened in the bass. The pitch, estimated from a pipe in the organ with which the harpsichord was combined shortly after it was made, is about a semitone below modern pitch. While the disposition of Theeus's harpsichord is different in detail from that of Müller's, the intention of both makers must have been to provide a wealth of tone colour. Since Theeus probably placed his 4′ jacks in the central register, the 8′ stops, with widely separated plucking points, would have been quite different in timbre. Stop knobs at the front of the instrument moved the lower guides to change the registration. (Movable lower guides, with the soundboard used as a stationary upper guide, were apparently also used by Müller and may have been a common north European characteristic.) A set of large bent pins in the bridge was evidently intended as a permanently engaged arpichordum stop for the shorter set of 8′ strings. Although the later standard Antwerp harpsichord disposition (1 × 8′, 1 × 4′) is decidedly less colouristic than the dispositions of Müller and Theeus, a relish for varied timbres is still evident in the development of muselars, spinetten and mother-and-child virginals, which can be coupled together to provide an 8′ plus a 4′ registration. In view of these it seems possible that harpsichords with complex dispositions were made in Antwerp before Ruckers.

During the 16th century north European makers began to build harpsichords that were wider to allow larger keyboard compasses, and longer to accommodate longer, lower-pitched strings. The presumably typical compass described by Sebastian Virdung in 1511 was *F*, *G* to *g″*. As late as the 1570s some instruments were still being made with *F*, *G*, *A* to *g″*, *a″*, commonly used in organs. *C*/*E* to *g″*, *a″* had become customary in Antwerp by the 1540s and is found even in some instruments made there in the 1590s. Karest's 1548 virginal, however, already had *C*/*E* to c‴, which remained usual on the Continent well into the 17th century. The Theeus harpsichord (*C* to *c‴*), as well as an English depiction of a virginal dating from 1591 and the use of low accidentals in English keyboard music of the late 16th century, all indicate that the chromatic bass octave (sometimes lacking *C*♯ or perhaps with the apparent *C*♯ key tuned to *A′*) was a characteristic feature of English harpsichords.

The German clavicytherium of around 1480 was probably tuned about a 4th above 8′ pitch, and the Müller harpsichord of 1537, even at the lowest level afforded by its transposing devices, was undoubtedly designed for a high pitch. The Karest virginal of 1550, however, could not possibly have been tuned higher than 8′ pitch and may have been significantly lower. By the end of the century, harpsichords with two keyboards, one at 8′ pitch, the other a 4th lower, had been developed in Antwerp. The earliest dated survival (Händel-Haus, Halle) was made in the Ruckers workshop in 1599, but two anonymous examples (Instruments Museum, Brussels Conservatory) may date from the 1580s. In all three instruments, before later alterations, the low-pitch keyboard had a compass of *C*/*E* to *d‴*. Instruments at high pitch continued to be made; the tradition of making instruments at various high and low pitches, seen most systematically in the work of the Ruckers family, persisted through the mid-17th century.

Some 16th-century German inventories hint at the existence of harpsichords with two manuals, although the generic term 'instrument' might refer to mother-and-child virginals or rectangular instruments with keyboards for two players at different sides of the case. Even if the instruments were wing-shaped harpsichords, the two keyboards may have been at different pitches, as in the transposing doubles made in Antwerp. An 'instrument with two ivory keyboards, purchased in Frankfurt an der Oder' listed in a Dresden court inventory of 1593 (transcribed in Fürstenau, C1872), however, is likely to have been a true non-transposing two-manual harpsichord, since mother-and-child instruments are described explicitly in the same source. Given the evident north European fondness for contrasting tone colours in harpsichords and the model provided by organs with multiple keyboards, it would be remarkable if non-transposing two-manual harpsichords had never been made during this period.

*(iii) Spain.* The harpsichord does not appear in Spanish iconography until the late 15th century but documentary references date back to the mid-15th. Juce Albariel, known as the Moor of Zaragoza, was described in 1465 as a maker of lutes, clavichords and instruments. He may have been responsible for a *clavicimbalo* in a black case inventoried in Zaragoza in 1469. Zaragoza was a notable centre of keyboard instrument making in the late 15th century and the early 16th, its most famous representative being another Moor, Mahoma (Joan) Mofferiz, who made instruments for royalty and the nobility, including a claviorgan with both gut-and wire-strung registers. In Seville, Maestro Enrique was building *clavicimbanos* in 1470, while before 1502 the Sevillian carpenters' guild required apprentice luthiers to learn how to make a *clavizimbano*.

Evidence for harpsichord making in the 16th century is entirely documentary. The richest source is the inventory of instruments belonging to Philip II (reigned 1556–98). His largest *clavicordio* was about 223 cm long and the smallest (a triangular instrument) only about 42 cm. Ebony and maple are the woods most frequently mentioned in the inventory, although a small instrument (*c*55·5 cm long) made by the Moor of Zaragoza was of inlaid walnut. Many of the king's instruments may not have been made by Spaniards. Following the installation of the Habsburg dynasty on the Spanish throne with the succession of Charles I in 1516 instruments and instrument builders were brought to Spain from the southern Low Countries, while there were close ties with southern Italy and Milan, which were Spanish possessions. Both

Italian and Flemish influence can be seen in surviving 17th-century instruments bearing Spanish inscriptions.

3. *c*1590 to *c*1700. Harpsichord making during this period may be divided into three major groups. One of these comprises an 'international style', practised with regional variations throughout most of northern Europe and perhaps also in Spain. Instruments of this group have many of the characteristics observed in 16th-century north European instruments (see §2(ii) above). Another major stylistic group, which by the final decades of the 16th century was already distinct as an outgrowth of the first group, was centred in the Low Countries under the dominant influence of the Ruckers family. The third major style of harpsichord making, largely separate from the first two, was that practised in Italy.

*(i) The Low Countries.* The development of the harpsichord in the Low Countries during the late 16th century and the 17th is inevitably associated with the work of the Ruckers family, a dynasty that dominated Antwerp harpsichord building for a century beginning in 1579, and whose instruments continued in use (sometimes radically rebuilt) throughout Europe as long as harpsichords were commonly played. In addition to a wide variety of virginals, the Ruckers workshops produced single-manual harpsichords of several different sizes, double-manual harpsichords and rectangular instruments consisting of a single- or double-manual harpsichord with an octave virginal built into the space beside the tail and played from one side of the rectangular case. Of these, the most common seems to have been a single-manual instrument approximately 183 cm long and 71 cm wide, with one 8′ and 4′ register and with a buff stop, consisting of leather pads carried on a sliding batten, for the 8′. The range of these instruments was almost invariably four octaves, *C/E* to *c‴*, although a few surviving examples originally had chromatic basses and sometimes extended to *d‴* in the treble. By the mid-17th century the Couchets, heirs of the Ruckers, made instruments of this type with a chromatic bass octave, and even with a keyboard extending chromatically down to *F′* and second with a 2 × 8′ disposition. Documents show that the Couchets also sometimes gave their instruments the more modern 2 × 8′, 1 × 4′ disposition, although no surviving instrument shows evidence of this. A late instrument, probably by Joseph Joannes Couchet (Nydahl Collection, Stockholm) had a compass from *F′* to *e‴*, only one note short of the five-octave compass common by the mid-18th century.

The tone of a two-register Ruckers harpsichord differs appreciably from that of an Italian instrument of the time, in having a more sustained brilliance and a somewhat less pronounced attack. The balanced differentiation in timbre produced by the gradual change in plucking-point from a third of the string-length in the extreme treble to about a tenth in the bass is adequate for distinguishing contrapuntal lines but not so pronounced as to prevent projecting a homogeneous sound in homophonic contexts; the 4′ register has a pleasant sound in its own right and is usable as a solo stop (as most 4′ registers on historic harpsichords are not) and when combined with the 8′ lends a marked brilliance and carrying power to the ensemble. A buff stop can be used to damp the higher overtones of the 8′ strings, producing a muted pizzicato effect. Until well after the beginning of the 18th century, registration was changed by reaching round the instrument and pushing or pulling extensions of the jackslides that passed through the treble cheekpiece, thereby moving the jackslide to the left or right to engage or disengage the register. Thus the player could not change registers except during a pause between movements or individual pieces.

The addition of a second 8′ register to the basic design (whether by the original maker or at a later date), though increasing the number of possible registers and yielding a louder ensemble when all stops are engaged, seems to spoil the sound of the individual registers, partly as a result of its slightly shifting the plucking-points and partly by its loading the soundboard with additional downward force from the added strings.

The basic characteristics of Ruckers harpsichords may have arisen at any time from about 1565 but were certainly well established at the end of Hans Rucker's career in the 1590s. Like their virginals Ruckers hapsichords were made in a range of sizes, with string lengths proportional to the intended pitch. The *c″* strings of harpsichords tuned to normal 8′ (*a′* = 415) were standardized at about 35·7 cm while instruments designed to be tuned a whole tone higher (a type which became popular during the 1640s) had strings eight-ninths as long; a unique harpsichord at 'quint' pitch by Andreas Ruckers (1627; Gemeentemuseum, The Hague), has strings two-thirds the normal length. The cases of Ruckers harpsichords are made of poplar about 14 mm thick, with a moulding cut into the upper inside edge, the bottom is attached to the lower edges of the walls. The interior is reinforced by separate upper and lower belly rails and by two bottom braces and two upper struts in single-manual instruments (three of each in doubles). Around each bridge there is a crescent-shaped area of soundboard unencumbered by ribs.

The outside of a Ruckers harpsichord was painted in imitation of marble, or more rarely with strap-work, and the inside decorated with block-printed papers, of which four or five different types were usually used on a single instrument. In instruments in which the inside of the lid was not decorated with a painting, the printed paper would have one or more Latin mottos lettered on it (fig.5). The soundboard decorations included arabesques and flowers and were executed in tempera, with a cast pewter 'rose' – a soundhole ornament that included the maker's initials (*see* RUCKERS, fig.3). Only a few surviving Ruckers and Couchet harpsichords retain their original stands; contemporary paintings showing instruments of this kind reveal two common designs, either framed structures with thick turned legs or complex affairs with heavy pierced fretwork ends connected by arcades supported by numerous turned balusters. The natural keys of these harpsichords are covered with bone and the sharps are made of bog oak. The fronts of the natural keys are usually decorated with a punched paper design glued on to a layer of coloured parchment. At the back of the keyboard there is a slotted rack similar to that found in an Italian harpsichord. However, instead of a slip of hardwood to fit into the appropriate slot in the rack, a Flemish keyboard has a metal pin driven into the end of the key, and the rack is topped with a padded overrail that limits the upward motion of the keys. This system is also used in the lower manual of two-manual instruments; however, there is no space for a rack behind the keys of the upper manual of a two-manual instrument, and the backs of the upper-manual keys are therefore guided by vertical wires

*5. Harpsichord by Andreas Ruckers, Antwerp, 1640 (Yale University Collection of Musical Instruments, New Haven, CT)*

rising between the keys at the back of the plank of wood on which the upper-manual balance rail is mounted.

Two-manual instruments were built in the Ruckers workshops as early as the 1590s. They had only two sets of strings, like the typical single-manual instrument, and only one of the two keyboards could be used at a time. In the most common type of the Ruckers double (*see* RUCKERS, fig.2), the lower keyboard had 50 keys and a range of *C/E* to *f‴*, and the upper had 45 keys and the smaller range of *C/E* to *c‴*. The *c* key of the upper keyboard was aligned over the *f‴* key of the lower keyboard, and a wide block filled in the space to the left of its lowest key (for illustration, *see* TRANSPOSING KEYBOARD). Playing a piece on the lower keyboard transposed it down a 4th with respect to the tonality it had when played on the upper manual. Because of the addition of strings in the bass to extend the range downwards a 4th from the *C/E* on the upper manual, and the additional space required for the added lower manual, two-manual instruments of this kind are some 7·5 cm wider and 40·5 cm longer than the normal four-octave single-manual harpsichord of just under 2 metres. As a special refinement, extra 8′ and 4′ strings were added to each of the G♯ keys on the lower manual, so that the keys would not be obliged to sound A♭ corresponding to the E♭ on the upper manual. Because of these extra strings, the keyboards of such instruments could not use any rows of jacks in common, and instruments so equipped had four rows of jacks (one 8′ and one 4′ on each keyboard) for their two sets of strings. Pictorial evidence and two much-altered examples (the Ruckers of 1599 in the Händel-Haus, Halle, and an unsigned instrument, probably also made in the 1590s, in the Instruments Museum, Brussels) suggest that this refinement was sometimes omitted, such that an instrument might have only three rows of jacks (one dogleg playable from both manuals); if conventional mean-tone temperament was used, the upper-manual E♭ strings would have to be returned for use as G♯ on the lower manual.

The musical purpose for which the Ruckers 'transposing' harpsichords were made remains disputed. The lower manual may have been used for transposing music to sound a 4th lower than notated (necessary in accompanying certain choral music; *see* CHIAVETTE). This explanation is consistent with the statement by Q.G. van Blankenburg (1654–1739) that musicians were 'so inexperienced in transposing that . . . they made expressly a special second keyboard in the harpsichord' (*Elementa musica*, 1739).

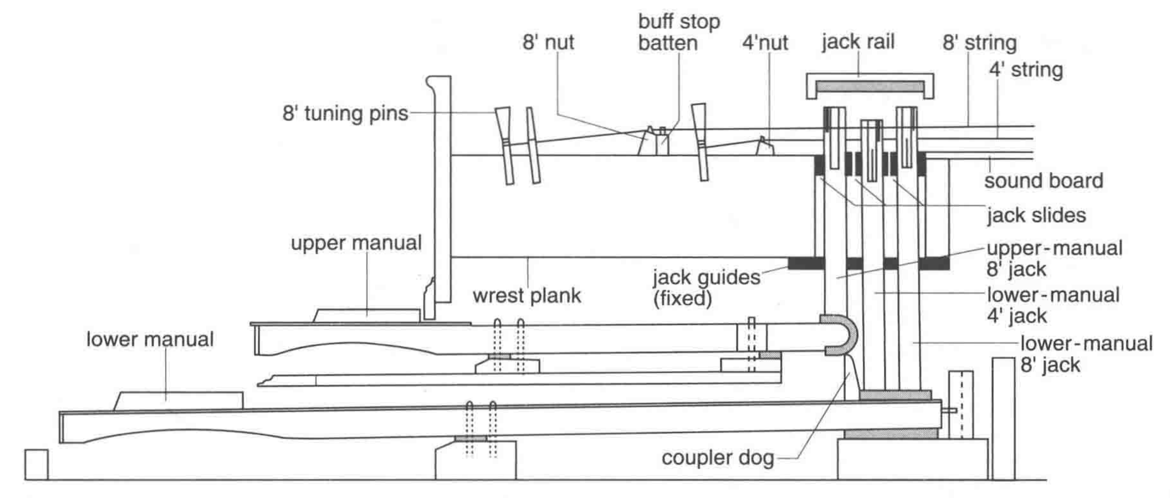
There is no evidence that the Ruckers or the Couchets made two-manual harpsichords with aligned keyboards (i.e. at the same pitch), but evidence from paintings of about 1618 to 1626 suggests that such instruments existed by then in the Low Countries. The only known pre-18th century example in the Germanisches Nationalmuseum in Nuremberg was made in 1658, probably in the Dutch Republic. It originally had two aligned keyboards with compass *C/E* to *c‴* but with only one set of 8′ strings and one set of 4′ strings. However, it had four registers: a close-plucking stop played only by the upper maual and two 8′ registers both plucking the same string but separated by the 4′ register, all three of which could be played by the lower manual. Such an instrument can be considered as a 'contrasting' double in that the nasal stop on the upper manual could be contrasted with the more mellow sound of either of the sets of jacks plucking the same string from the lower manual. But there would be little dynamic contrast between the combined 1 × 8′, 1× 4′ on the lower manual and the more agressive sound of the lute on the upper manual, and the sounds could not be contrasted without a pause to change registration, since (as is also the case in transposing doubles) damper interference prevents registers acting on the same set of strings from being engaged simultaneously on both keyboards. The only instantanteous contrast possible would have been between the 4′ played on the lower manual and the nasal 8′ played on the upper.

In view of the Dutch and Flemish maker's apparent anitpathy toward multiple 8′ stringing, it is likely that any aligned two-manual harpsichords made during the first half of the 17th century had 1 × 8′, 1 × 4′ stringing. If they did not have nasal stops, they may have been disposed like Ruckers transposing doubles with aligned keyboards. Van Blankenburg described a practice of altering Ruckers doubles by reaaranging the lower-manual keys so that they play at the pitch of the upper manual but without adding a second set of 8′ strings. Several Ruckers harpsichords altered in this conservative manner still exist. Certainly neither the 1658 harpsichord nor these 'aligned transposers' can be considered as 'contrasting' two-manual harpsichords like those beginning to be made in France during this period (see §3(ii)(a) below). Rather, these early Dutch or Flemish non-transposing doubles are like two single-manual harpsichords with different tone qualities contained within the same case (while transposing doubles are like two single-manual harpsichords tuned to different pitches). The principal advantage of the 1658 harpsichord over contemporary German four-register instruments with a single keyboard is that, with fewer

jacks carried by each key, the action would be more supple.

About a dozen harpsichord makers in addition to the Ruckers family were active in Antwerp in this period, and about two dozen makers' names are known from elsewhere in the Low Countries. The small number of their instruments that have been preserved ae almost identical to those of the Ruckers, whose influence as dominant both through the large-scale importation of their instruments and through the emmigration of makers trained in Antwerp. Many makers of German origin were also active in the northern Netherlands, and the nasal register in the anonymous two-manual harpsichord of 1658 indicates that the German style of harpsichord making (see §3(ii)(c) below) had some influence there. The earliest definite appearance of true contrasting two-manual harpsichords in the low Countries is found in an advertisement of 1687 by the maker Cornelis van Dort in The Hague, who offered a three-manual harpsichord as well as two-manual instruments with four registers and three sets of strings.

*(ii) Transalpine Europe outside the Low Countries.* While the importance of Ruckers harpsichords (see §3(i) above) were being shipped to many parts of Europe and even to the Spanish colonies of the New World, harpsichords of a different kind were being made elsewhere in northern Europe. Most of these instruments were discovered in the late 20th century and their places in the history of the harpsichord have not yet been thoroughly assessed. Many seem to present a mixture of Italian and Ruckers-style features. This has sometimes been explained either as the result of influence from both directions or as a stage of arrested development between the Italian style (as the presumed source of all harpsichord making) and that of the Ruckers. A more recent interpretation is that these instruments are part of an indigenous north European tradition, already apparent in the 15th century and observable in the work of such 16th-century masters as Hans Müller, Joes Karest and Lodewijk Theeus (see §2(ii) above).



Although the particular origins of harpsichord making in 17th-century England, France and Germany may be disputed, the instruments themselves are important because of their association with notable composers of the period. These, including the English virginalists, the early French *clavecinistes*, and German-speaking composers such as Froberger, Buxtehude and J.S. Bach, greatly outnumber the important composers, such as J.P. Sweelinck and Frescobaldi, associated with the better known harpsichords of the Ruckers and the Italian makers. Further, while the Ruckers influence strongly affected north European 18th century harpsichord making, it did not penetrate far into central and southern Germany. Even in Ruckers-dominated 18th-century French harpsichord making, some important aspects of the earlier style persisted.

*(a) France.* The 'contrasting' or 'expressive' harpsichord, with two keyboards than can be used simultaneously or in rapid alternation, was developed in France by the mid-17th century. This type of instrument soon became known throughout northern Europe and continued to be made until the obsolescence of the harpsichord at the end of the 18th century. Also arising in 17th-century France was an important school of harpsichordists, including Chambonniéres, Louis Couperin and J.-H. d'Anglebert, whose compositions, skilfully exploiting the idiomatic capabilities of the harpsichord, were long and widely influential.

What little is known about the harpsichord in 16th-century France stems from inventories. These suggest that wing-shaped harpsichords were rare, while inexpensive small *épinettes* (virginals) predominated. The earliest clear evidence of a harpsichord is in an inventory of the estate of the Parisian organist Pierre de la Barre (i) (*d* 1600), who left a 'clavesin' as well as a clavichord and three 'espinettes'. In 1617 the organist J. Lesecq owned two harpsichords, each with two stops. Further technical details are in a 1632 inventory of the workshop of Jean Jacquet, where there were two harpsichords, one with a single set of strings, the other with 100 strings (presumably having two registers and a keyboard compass of 50 notes, probably *G′*/*B′* to *c‴*, a small downward extension of the *C*, *D* to *c‴* compass common in French organs of the period).

The most voluminous French source of information about harpsichords before the 1640s is Mersenne's *Harmonie universelle* (1636–7), but this must be used with caution: Mersenne described not only the commonplace and native but also the unusual and foreign, without always specifying the difference, and added his own suggestions and theorizing. His passing remark about harpsichords with seven or eight *jeux* (stops or combinations of stops) and two or three keyboards may refer to otherwise unknown early 17th-century French harpsichords, but it is also consistent with the familiar two-manual transposing harpsichords of the Ruckers, in which the two registers on each keyboard provide three *jeux* (8′ alone; 4′ alone; 8′ and 4′ together), at least two additional *jeux* are provided by the buff stop, and a third keyboard is sometimes available in a virginal built into the hollow of the bentside.

Mersenne's main description of the harpsichord is illustrated by a fine, realistic engraving of a single-manual instrument, presumably a typical Parisian harpsichord of the period. The illustration is generally consistent with what is known about early northern European harpsichord making and with the few details known from other French sources. Like Ruckers harpsichords, it has a 1 × 8′, 1 × 4′ disposition. As in the pre-Ruckers harpsichord made by Lodewijk Theeus (see §2(ii) above), the nuts in Mersenne's harpsichord are straight and may lie on resonant soundboard; the 4′ wrest pins are grouped together with the 8′ pins near the nameboard, such that the 4′ strings must pass through holes drilled through the 8′ nut. The scaling is quite long in the treble, evidently intended for iron strings, and is strongly foreshortened in the tenor and bass. Although the keyboard, with compass *C* to *c‴*, is consistent with Mersenne's initial description of an instrument with 49 notes, the engraving shows sets of 50 wrest pins, strings and jacks, Mersenne stated that the harpsichord ordinarily has 50 keys and 100 strings. This corresponds both to the 100-string harpsichord in Jean Jacquet's workshop in 1632 and to the typical *G′*/*B′* to *c‴* compass of later 17th-century French harpsichords. Mersenne mentioned that the registers of a single-manual harpsichord can be controlled by a conventional stop mechanism but states that many persons preferred a different system in which the keyboard was pushed in and pulled out. In this arrangement a small block is glued near the distal end of each key lever. With the keyboard shoved

*6. French two-manual harpsichord action, 17th–18th century*

all the way back, the blocks push up the jacks in the rear row but miss the front row; with the keyboard pulled out they push up only the front jacks; in an intermediate position they engage both sets of jacks. This mechanism, later occasionally used in Italy and Germany but not found in any extant French harpsichord, would have been especially advantageous in harpsichords in which the jacks were guided by stationary slots in a soundboard extending to the nameboard, as seems to have been the case in the instrument shown in Mersenne's illustration.

Approximately 35 17th-century French harpsichords are known; half of those whose origin can be determined were made in Paris, and about a quarter in Lyons. Most were discovered after 1970. The earliest signed and dated example (Museé de l'Hospice Saint-Roch, Issoudun) was made by Jean Denis (Paris, 1648). It has two keyboards, originally *G′*/*B′* to *c‴*, with three sets of strings and three registers, 8′ and 4′ on the lower manual, 8′ on the upper. It may thus be regarded as a combination of two typical single-manual harpsichords, one disposed 1 × 8′, 1 × 4′, like Mersenne's, the other with only a single 8′ stop, like the single-strung harpsichord in Jacquet's workshop in 1632. The use of such two-manual harpsichords was explained by Denis in his *Traité de l'accord de l'espinette*, where he mentions 'harpsichords with two keyboards for passing all the unisons', that is, on which it is possible to play *pièces croisées*, the earliest extant examples of which were written by Louis Couperin. The Denis harpsichord of 1648 has a shove coupler, now operated by shifting the upper manual; but before the compass was enlarged around 1700, the coupler may have been engaged by pulling the lower manual forward to bring the coupler dogs under the distal ends of the upper manual keys. This arrangement is found in several later 17th-century French harpsichords. The shove coupler allows the keyboards to be separated for playing *pièces croisées* or combined for playing all the registers from the lower manual. A few 17th-century French harpsichords have been found with only a 4′ stop on the upper manual or with dogleg jacks rather than a shove coupler. Such dispositions, which do not allow *pièces croisées* to be played, are in most instances probably the result of misguided restorations. Well-preserved instruments that have been examined in detail almost invariably have the standard dispostion of 1 × 8′ and 1 × 4′ on the lower manual, 1 × 8′ on the upper, and a shove coupler.

Only a few single-manual harpsichords from this period are known. Generally, as in an instrument by Nicolas Dufour (Paris, 1683; Shrine to Music Museum, Vermillion, South Dakota), they are disposed 2 × 8′. The more substantial tone provided by this disposition in comparison with 1 × 8′, 1 × 4′ may reflect increased use of the harpsichord for basso continuo accompaniment. Nevertheless, an inventory shows that in 1672 Jean Denis was still making single-strung harpsichords in addition to larger models. Two one-manual harpsichords with three sets of strings, presumably 2 × 8′, 1 × 4′, were listed in the inventory of d'Anglebert's estate in 1691.

While some harpsichords with expanded compasses, such as *G′ A′* to *c‴*, began to be made shortly before 1700, the *G′*/*B′* to *c‴* compass (sometimes with the *E♭* key divided to provide both *B′* and *E♭*; sometimes also with the C♯ key divided to provide both *A′* and C♯) was commonly made as late as the 1690s. The keyboards and actions of 17th-century French harpsichords are especially elegant. Keys are quite small, with natural heads often as short as 30 mm. The three-octave measure is very narrow, typically about 470 mm, allowing a normal hand to span the interval of a 10th, as is required in certain French compositions of the period. The naturals are covered in ebony; the sharps are usually blocks of solid bone. The natural fronts are usually decorated with carved trefoils. The backs of the keys of single-manual harpsichords and the lower manual of doubles are guided by metal pins fitting in the slots of a wooden rack. Upper-manual keys are guided by a slot cut through each key-lever, near the back but in front of the jack. For each slot there is a vertical pin held in the back rail of the key-frame. The jack slides and lower guides consist of thin wooden battens covered with leather, the mortises in the wood being oversized, so that the jacks bear only against the leather (fig.6).

Although extant instruments show much uniformity in dispositions and in details of the keyboards and actions, other features of design and construction vary considerably. No chronological progression is apparent in case shape, construction, materials or scaling other important characteristics. Three of the earliest examples, by Jean

*7. Harpsichord by Antoine Vaudry, Paris, 1681 (Victoria and Albert Museum)*

Denis, (1648), Claude Jacquet (Paris, 1652; Ringling Museum, Sarasota, Florida), and Louis Denis (Paris, 1658; private collection, France), are similar in construction. The case walls, of softwood or poplar, are relatively thick, about 12 to 13 mm, and the spine somewhat thicker. The bottom board is applied to the bottom edges of the walls. There are separate upper and lower belly rails. The several bottom braces, butted to the spine and bentside, are approximately perpendicular to the latter. The ends of the braces in the two Denis instruments are shaped like knees reaching up the the liners, and all three instruments have several upper-struts between the spine and bentside liners. In the Jacquet there are also several diagonal struts to the bentside liner.

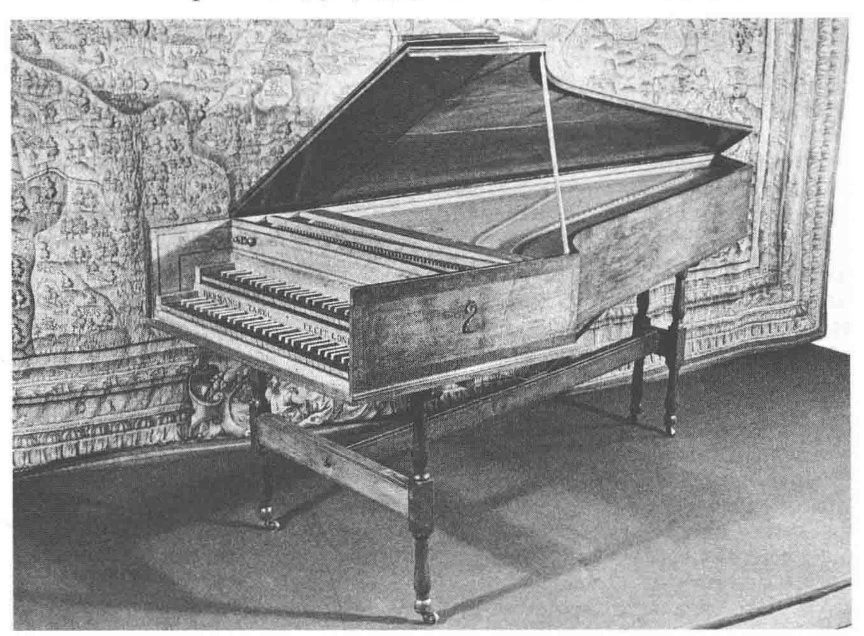
These thick-cased instruments, made of inexpensive woods intended to be painted, superficially resemble Ruckers harpsichords. In many other French instruments, for example, by Louis Denis (1677, Musée de la Musique, Paris), and Antoine Vaudry (Paris, 1681; Victoria and Albert Museum, London; fig.7), the cheekpiece, bentside, and tail are of walnut, only about 10 mm thick, with the spine of softwood, often thicker than the other walls. Presumably, the handsome walnut wood was originally left unpainted (most examples, however, were later redecorated with paint), while the plain back of the spine, placed near the wall of the room, was usually not visible. In some instruments, for example by Nicolas Dufour (1683) and Gilbert Desruisseux (Lyons, *c*1680; Musée de

la Musique, Paris), the tail is combined with the bentside in an S-shaped curve.

Bracing systems other than those made by Jacquet and the Denis are known. In the Vaudry harpsichord, for example, there are four bottom braces with ends shaped like knees, but no upper-level braces or diagonal struts. In an anonymous Parisian harpsichord dated 1667 (Museum of Fine Arts, Boston) the bentside is braced only by two diagonal struts. A harpsichord dated 1668 (Musée de la Musique, Paris), made at least partly by Zenti is constructed in the Italian false inner-outer manner. The walls are attached to the edges of the bottom board, and the interior structure includes knees and a belly rail in the Italian style. Some native French makers, for example Vincent Tibaut of Toulouse and Nicolas Blanchet of Paris in a harpsichord dated 1693 (private collection) also attached the walls to the edges of the bottom board.

Bridges were sometimes bent to their curve but sometimes sawed, and were made with various cross sections, sometimes truncated-triangular (as in Ruckers harpsichords), sometimes moulded (as in Italian harpsichords). Normally, the 4′ hitch pin rail is very light, only about 20 mm wide in the bass. Ribbing patterns vary considerably in detail, but there are usually several ribs that cross under the bridges.

Scalings also varied considerably. Some instruments, for example, the anonymous Parisian harpsichord of 1667 with a *c″* string length of 26·5 cm, were undoubtedly intended to be strung in brass throughout the compass. The many instruments with longer scalings, for example the Denis harpsichord of 1648 with a *c″* length of 34·5 cm, would have had iron strings in the treble. The otherwise quite similar harpsichord by Claude Jacquet (i), of 1652 with a *c″* length of 31·6 cm, may have been designed for a higher pitch. The existence of more than one pitch standard is implied by 'a harpsichord with one keyboard which transposes one tone' (presumably by sliding toward the treble or bass) in Denis's workshop in 1686 (see Hubbard, 1965). Nevertheless, the exceptionally long scaling of a harpsichord by Michel Richard (Paris, 1688; Yale University Collection, New Haven, Connecticut), with a *c″* length of 38·8 cm, might not imply that it was intended for a much lower pitch than the more typical *c″* scalings of about 34·5 cm, but rather that the strings were more highly stressed. Richard seems to have imitated a Ruckers two-manual transposing harpsichord that had been modified into a French-style contrasting double. In conversions of actual Ruckers harpsichords, the addition of a second set of 8′ strings on the bass side of the jacks results in similarly long scalings.



As early as the 1640s, and perhaps earlier, harpsichords from the Low Countries were used in France. Towards the end of the century Ruckers harpsichords were beginning to influence some French makers. Although the Ruckers style of scaling, case construction and soundboard design became dominant in the 18th century, important aspects of the native style, particularly in dispositions and the design of the keyboards and action, were never abandoned.

*(b) England.* Despite the importance of the English harpsichord composers active during the last quarter of the 16th century and the first quarter of the 17th, very little is known about the instruments that they played. Apart from one or two examples of dubious authenticity, only two English harpsichords from this period are known, both made in London: one by Lodewijk Theeus (ii) in 1579 (see §2(ii) above) and the other by John Hasard in 1622 (Knole House, Sevenoaks, Kent). It has often been assumed that the early English harpsichordists mainly played instruments imported from Italy and Antwerp, but the English reperory of the period frequently requires accidentals that were usually lacking in the short-octave basses of continental instruments. English-made instruments with chromatic bass compasses, already present in the Theeuwes harpsichord of 1759, were probably in common use. The dearth of surviving examples is explicable as the result of such events as the Fire of London (1666) and of 18th-century prosperity, which allowed outdated instruments to be discarded for new ones.

The Hasard harpsichord of 1622 is now a shell without its soundboard and keyboard. The compass was 53 notes, probably *C* to *e‴*. With moderately thin oak walls (8 mm), separate upper and lower belly rails, a plate-like lower guide, and one of the nuts placed on active soundboard, the instrument is closely related to the northern European tradition seen earlier in the work of Hans Müller and the pre-Ruckers makers of Antwerp. The 20 or so extant English virginals, dated between 1638 and 1684, also have characteristics of this early style. The state of the Hasard harpsichord precludes a definite reconstruction of its disposition, but with three sets of strings and three rows of jacks it undoubtedly provided a wide variety of tone colour. One stop was probably tuned about a 4th below 8′ pitch, with the others an octave higher, one of these being a close-plucking nasal stop.

The only other surviving 17th-century English harpsichord was made by Charles Haward in London in 1683 (Yorkshire, Hovingham Hall). It has moderately thin (8 mm) walnut walls, with an S-shaped bentside. The short scaling, with *c″* about 17 cm long, is suitable for brass strings at normal 8′ pitch. Similar characteristics of construction and scaling are seen in English bentside spinets of the period. The disposition of the Haward harpsichord, now 2 × 8′, has been altered, but it originally included one or perhaps even two nasal stops. A further indication of a relish for varied tone colour is a report by Thomas mace (*Musick's Monument*, 1676) that John Haward (almost certainly a close relation of Chales) invented a harpsichord with several stops controlled by pedals.

The few surviving English harpsichords made during the first quarter of the 18th century, before the ascendancy of Jacob Kirkman and Burkat Shudi, are stylistically similar to the late 17th-century instruments. Single-manual harpsichords, for example by Thomas Hancock (London, 1720; Edinburgh, Russell Collection) and William Smith (London, *c*1720; Oxford, Bate Collection) however, were now made without nasal stops, being disposed 2 × 8′. Two-manual harpsichords start to appear, the earliest surviving example being by Joseph Tisseran (London, 1700; Bate Collection). This and one by Francis Coston (London, *c*1725; Edinburgh, Russell Collection) are scaled for iron strings in the treble and have three-stop dispositions, with 1 × 8′ and 1 × 4′ on the lower manual and a dogleg 8′ playable from both keyboards. A harpsichord made by Hermann Tabel in London in 1721 (County Museum, Warwick; fig.8) has the same disposition with the addition of a mnasal stop on the upper manual. This instrument, however, lacks the vestiges of

*8. Harpsichord by Hermann Tabel, London, 1721 (County Museum, Warwick)*

17th-century style still evident in the Tisseran and Coston doubles and is essentially a fully developed example of the pattern followed by Table's pupils, Kirkman and Shudi, and their successors throughout the 18th century (see §4(ii) below).

*(c) Germany.* Only a few harpsichords made in Germany and regions to the east and north survive from this period. While varying greatly in detail, in general they belong stylistically to the same tradition as the Hans Müller harpsichord of 1537 (see §2(ii) above). Case walls are usually of moderately thin hardwood and are sometimes attached to the edges of the bottom. While most instruments have a normal bentside and tail, bentsides are occasionally S-shaped, a form first seen in Praetorius's illustration of a clavicytherium (1620); or the tail may be composed of two small straight sections angled to approximate a reverse curve. Nuts are often on resonant soundboard wood. Usually there are soundboard ribs crossing under the bridges. While many instruments seem to have been scaled for iron strings in the treble, brass scalings were also used. Some harpsichords were probably intended to be tuned to *Chorton* (*a*′=*c*465), the pitch of organs in many places.

The dispositions usually provide a wealth of tone colour and often include buff stops and multiple 8′ stops with widely different plucking points. One of the few signed and dated examples, a harpsichord made by Johann Mayer in Salzburg in 1619, is typical, having two sets of 8′ strings acted upon by three rows of jacks, one of them a close-plucking nasal stop. An anonymous early 17th-century German clavicytherium (Germanisches Nationalmuseum) Nuremberg has a similar disposition, with a 4′ stop as well. In an anonymous German harpsichord of *c*1630 (Bayerisches Nationalmuseum, Munich) there are two sets of 8′ strings plucked by two registers of jacks with normal plucking points, two nasal registers (one of them with metal plectra), and a fifth register with plucking points exceptionally far from the nut, therefore with a flute-like tone. Some harpsichords, however, had less elaborate dispositions, as in two early 18th-century instruments in conservative styles, one made by I.N. Cousseneers in Düsseldorf in 1726 (private collection, USA; described in Watson, C1997), with 1 × 8′, 1 × 4′, and an anonymous Thuringian harpsichord (Bachhaus, Eisenach), with 2 × 8′. Towards the end of the 17th century, two-manual harpsichords were undoubtedly made, but none has survived.

*(d) Austria.* Those few instruments that are extant in Austria show more parallels with the organ and harpsichord traditions of central and southern Germany. Two magnificent claviorgans of 1639 and 1646 by Valentin Zeiss, the Linz organ builder and court joiner to Ferdinand III, have been preserved (Museum Carolinum Augusteum, Salzburg); the harpsichord part is mounted on a large rectangular chest organ, and each instrument has three stops. In the older of the two, the organ part can be played with a pedal; the later instrument has sets of jacks arranged in a fan shape, allowing the harpsichord to produce strong contrasts of tonal colour. This feature and other stylistic peculiarities are found in several harpsichords of this period which are assumed to be south German or Austrian, the 'Hapsburg type' of harpsichord (Museum Carolinum Augusteum, Salzburg and the Bayerisches Nationalmuseum, Munich). Another instrument (Hungarian National Museum, Budapest) was also originally combined with an organ. Its case is made without any crossbars, braces or struts. (According to tradition, this instrument came into the possession of Emperor Joseph II.) An Innsbruck court inventory of Archduke Siegmund Franz, drawn up in 1665, mentions a harpsichord with several registers, made by the Tyrolean organ builder Daniel Herz (1618–78).

The only other signed 'Austrian' harpsichords of the 17th century are an instrument made by Johann Anton Miklis in Prague in 1671, and a harpsichord signed 'AN (or AH) 1696' and probably made in Vienna. Stylistically and technically it is conservative, especially in the absence of braces in the case, the thin, lightly ribbed soundboard, the divided bridges in the bass, and the wrest plank, which is on free soundboard. The keyboard, with a range of

*F′–g‴*, unusually large for this period, is diatonic in the lowest octave, and has natural keys split into twos or threes with a wealth of contrasting intarsia work. This style seems to have been taken as the norm in Austria by 1676, as a number of compositions and a set of instructions for stringing are given by Alessandro Poglietti (*d* 1683) in his *Compendium* (1676), and it remained the standard type until the middle of the 18th century.

*(e) Spain.* Almost a score of 17th- and 18th-century harpsichords probably or definitely attributable to Spain have been located. Their great variety shows that Spanish makers (frequently organ builders) had an idiosyncratic approach to their craft, each producing his own blend of personal and borrowed elements. One example is an instrument found in Castille and now in the Zayas collection that has 8′ registers like a harpsichord, a protruding keyboard like a spinet and a long side that forms an atypical angle of 140° with the left-hand cheek. After restoration in the Dolmetsch workshop it has a full four-octave compass. Developments that took place in other countries appear also to have occurred in Spain. Three instruments in the Beuermann collection, if genuine, throw light on a hitherto obscure period in Spanish keyboard history. Two of these are two-manual transposing instruments: one bearing the name Fray Pedro Luís de Bergaños and dated 1629 had two unaligned keyboards (*C/E–c‴*, now aligned) at an interval of a 4th, while the other, inscribed with the name F. Bartomeu Angel Risueño and the date 1664, is a one-tone transposing instrument (*C/D–d‴*). Both are decorated with painted arabesques similar to patterns found on the printed papers used to decorate instruments from Antwerp. The question of enharmonic instruments was raised in 16th-century Spain by Francisco de Salinas and Juan Bermudo among others, and an experimental five-manual harpsichord was built in the mid-17th century. The Italian maker Bartolomé Jovernardi presented a 'cimbalo perfetto' to Philip IV in 1634; as well as three 8′ registers designed to produce *piano* and *forte* effects it had split *D♯/E♭* and *G♯/A♭* keys. A harpsichord inscribed 'Domingo de Carvaleda 1676' with three split *D♯/E♭* keys is in the Beurmann collection.

*(iii) Italy.* The history of Italian harpsichords from the 16th century to the 18th is not the seamless continum described by some earlier authors. Modification of early instruments, adapting them to later taste, for some time obscured an understanding of the change in traditions that took place between the 16th and 17th centuries. It is now known, for instance, that after about 1600 the *C/E–f‴* compass became less popular and the 4′ register was rarely provided. In this period the Italian harpsichord was called upon to provide a basso continuo, for which two 8′ registers were obviously judged more suitable. Whereas no harpsichord at 8′ pitch with 1×8′, 1×4′ disposition and a *C/E–f‴* compass is known to have been made after 1585, a few 2×8′ harpsichords with this compass were built between about 1600 and 1630. Throughout the 17th century, but particularly in the first half, the *C/E–c‴* compass was the most commonly used.

Not only did new instruments no longer conform to typical 16th-century specifications, but older instruments were modified. A document reveals that a harpsichord made in 1570 by Vito Trasuntino had already had its 4′ bridge removed by 1630; the practice of modifying old instruments continued until about 1700. In most instances the older *C/E–f‴* compass was changed to *G′/B′–c‴* modification easily achieved since the same number of keys is involved. At the same time the 4′ bridge was usually removed, sometimes also with a minor modification to the position of the 8′ nut in order to adjust the scale. The resulting change of scale, typically from about 35 cm to about 27 cm, required the use of brass wire instead of the previous iron wire. Because of the difference in the tensile strength of iron and brass wire, the pitch remained at the same basic level. Of course, the new *G′* key sounded a whole tone lower than the original bottom *C*, but it may be supposed that the principal motivation in these changes was to achieve a wider range in the bass. This was possible without any significant compromise in tonal quality since the 16th-century design with its bottom *C* note used a case length (*c*220 cm) which was almost the same as that later used for instruments starting on *G′* (*c*230 cm).

The earliest surviving harpsichord with *G′* as its lowestnote is probably come of about 1619 attributed to Boni, with multiple split natural keys (private collection, England; see Wraight, 1997), but its original compass is uncertain. A more conventional keyboard, *G′/B′–c‴*, was unsigned, but now attributed to Albana and dated *c*1624–48; Metropolitan Museum of Art, New York), and the oldest dated occurrence of this range is in a Boni harpsichord of 1653 (private collection, Vienna). The *G′/B′* short octave was never as popular in Italy as the *G′/A′* arrangement (i.e. lacking *G♯′*), the first dated instance of the latter being the 1662 harpsichord of Giacomo Ridolfi (Germanisches Nationalmuseum, Nuremberg), but it was probably already used in the 1620s. Although many compasses started on *G′*, it was uncommon in the 17th century for them to exceed *c‴* the datable exceptions reaching to *d‴*, (*d‴/e‴*), or *f‴*. This has seemed puzzling in view of the earlier use of compasses reaching to *f‴* at 8′ pitch, but these changes in compass are evidence of a changing performing practice. The lowest range used in Italian harpsichords emerged at the end of the 17th century: *F′G′A′–c‴* is first found in an unsigned instrument dated 1695, now known to be by Antonio Migliai (Händel-Haus, Halle; see Wraight, 1992). *F′G′–c‴* was used in Rome by Mattia do Gand (*b* 1663–7, *d* after 1739) in 1675 (Tagliavini collection Bologna).

As in the 16th century, single-register harpsichords were made; ten that survive can be assigned to the first half of the 17th century. Although the principal disposition in use in the 17th century was 2×8′, stop knobs were rarely provided for changing registers; it appears that rapid changes of colour were not an essential part of performing practice. Some instruments, including one each by Boni and Albana, were made with 3×8′, an arrangement which is only possible if one of the sets of strings is at a different level (see §1 above, and Wraight, 1997). Albana appears to have achieved this by using two nuts. Another 3×8′ harpsichord, attributable to Migliai around 1702 (private collection, England; see Wraight, 1997), used two different bridges so that iron and brass strings were at the same pitch.

Throughout the 17th century short scales (*c″*) at 25–9 cm) predominated and in most cases these indicate normal 8′ pitches intended for brass wire stringing. Some may have been intended for the high 8′ pitch (*a′* =*c*520), strung with iron wire, but (as discussed in §2(i) above) it is difficult to distinguish this design from the brass-strung harpsichord. Indeed, it is possible that what has come to

be seen as the 'traditional' Italian harpsichord with a short, brass-wire scale is in fact the restringing of a 16th-century, iron-wire scaled design. Scales used, and therefore pitch levels, after 1600 were substantially the same as those of the 16th century; no general rise in pitch seems to have taken place. The harpsichord of 1610 by Vincentius of Prato (Vassar College, Poughkeepsie, NY) could have been intended for the high 8′ pitch strung in iron wire, but the scaling of the 1637 Zenti bentside spinet (*see* SPINET, fig.3) demonstrates more clearly that this high pitch was still used well into the 17th century. Another exception is the 1628 Albana harpsichord (*c″* at 24·8 cm; Museo Civico, Bologna) which was probably intended to stand a 4th higher than normal 8′ pitch. Long scales (*c″* at *c*35 cm) at normal 8′ pitch intended for iron wire, which were common in the 16th century, are unknown in harpsichords of this period, although used in virginals until the 1630s. A few harpsichords, even as late as 1700 (e.g. by Migliai, *c*1680, described below) have *c″* at about 30 cm, which, when strung with iron wire, corresponds to the higher of the two 8′ pitches normally used before 1600. There is little evidence to explain why brass wire scales at the same pitch as iron wire scales should have been preferred in the 17th century. That brass wire gives a louder, even coarser sound had already been noted by Virdung in 1511. The clear tendency towards a 2×8′ disposition in the 17th century also suggests the desire for a high volume of sound. However, it must also be remembered that this assumption of a change of string material is based on the comparison of mostly Venetian scales before 1600 with largely Florentine and Roman scales after 1600. It is possible, though not proven, that there was always a strong tradition of using brass scales in Rome and Florence.

There are some documentary references to harpsichords with an *ottava bassa*: Urbani (*fl* 1642) and Zenti made such instruments, and since both worked in Rome this may have been a Roman speciality. A harpsichord by Zenti, now in the Deutsches Museum, Munich, and thought to be identical with the instrument of 1658 mentioned in the Medici inventory of 1700, was made with a single manual and a 2×16′ disposition (it was subsequently given two extra manuals and a fake 'Bartolomeo Cristofari' inscription; see Wraight, 1991, and Gai, 1969).

It is the early 17th century that provides the most examples of keyboards with split keys, included to extend the chromatic degrees of the tuning, usually providing D♯ as well as E♭ and A♭ as well as G♯. The common practice was to place the note more often used at the front of the split sharp, for example E♭ in front and D♯ in back. In most such instruments the *C*/*E* short octave was also filled out with the addition of *F*♯ and *G*♯ as split sharps. Whereas it was previously thought that these instruments (including virginals) were made throughout Italy over a period extending into the 18th century, it has now become clear that most of them were made between about 1620 and about 1650, and that many of them were the products of Poggi's workshop in Florence and Boni's in Rome (Wraight and Stembridge, 1994).

Two-manual harpsichords are rare in the Italian tradition: one interesting exception, attributed to Migliai around 1680 in Florence (Germanisches Nationalmuseum, Nuremberg), also has a 4′ register as well as 2× 8′ despite having been built at a time when the 4′ stop was no longer common. The keyboard has no coupler and the 4′ is on the upper manual.

Most 17th-century harpsichords were 'inner-outer' instruments, that is, made with thin case sides and kept in separate decorated outer cases. The earliest virginal made in the 'false inner-outer' fashion, with a single case having mouldings around the inside edge to give the illusion of two separate cases, is dated 1587 (Celestini; Beurmann Collection, Hamburg), but this style was apparently not adopted for harpsichords until the early 18th century, as in some Cristofori instruments.

Francesco Poggi, Pasquino Querci (*fl* 1610–25), Stefano Bolcioni (*fl* 1627–41) and Antonio Migliai (*fl* 1682–1704) are the 17th-century Florentine instrument makers whose work was best known in the late 20th century; some of those working in Rome whose instruments survive are Boni, Albana, Filippo Fabbri (*b c*1636–41; *d* 1691), Zenti, G.B. Giusti (*b c*1624–35; *d* after 1692), Ridolfi (*fl* 1650–82) and Giuseppe Mondini (*fl* 1631–1718). Among these makers the reputation of Zenti (*b* ?1609–11; *d* 1666–7) appears to have been the greatest, since he worked at royal courts in Sweden, England and France. His surviving instruments are competently made but not elaborate.

4. 18TH CENTURY.

*(i) France.* The history of French harpsichord making at the beginning of the 18th century is largely an account of the rapid expansion of the keyboard compass and the definitive adoption of a national variant of the thick-cased, long-scaled Ruckers design. Although harpsichords of the 1690s were still made with the typical 17th-century compass of *G′*/*B′* to *c‴* and sometimes with other features of earlier styles, such as thin cases and moulded bridges, a harpsichord made by Nicolas Dumont in Paris in 1707 (private collection), with compass *F′* – *e‴*, has most of the characteristics of a mature 18th-century French instrument. The reasons for these changes seem to have been the preference of musicians for the tone of Ruckers harpsichords and for the expanded musical possibilities inherent in larger instruments.

Although Ruckers harpsichords had long been known in France, they had existed alongside native instruments, many of which were radically dissimilar in scaling and construction. Even those instruments from the middle of the 17th century (such as those made by Jean Denis in 1648, Claude Jacquet in 1652 and Louis Denis in 1658, see §3 (ii)(a) above) whose external design coincidentally resembles that of Ruckers harpsichords are significantly different internally, having, for example, ribs crossing under the bridges and much lighter 4′ hitch-pin rails. The increasing regard for Ruckers harpsichords towards the end of the century, however, is shown by deliberate imitations of them by French makers, for example by Michel Richard in 1688 (see §3 (ii)(a) above) and by a certain 'D.F.' (undated instrument in the collection of Yannick Guillou, Paris, described by Anselm, 1996). Both instruments are not only thick-cased and long-scaled but also decorated with Antwerp-style soundboard painting and, in the 'D.F.', block-printed papers. While some divergences from Ruckers practice, such as the positioning of the bottom braces nearly perpendicular to the bentside rather than to the spine, may be seen as reasonable efforts to strengthen the case, the reinforcement of the soundboard with ribs crossing under the bridges suggests that Richard and 'D.F.' did not entirely appreciate all the

subtleties of Ruckers soundboard design. Nevertheless, the massive Ruckers-style 4′ hitch-pin rails in these harpsichords indicates that their makers were beginning to adopt Ruckers principles more than superficially.

Knowledge of all aspects of the design of Ruckers harpsichords was undoubtedly acquired during ravalement, the process of rebuilding old harpsichords to suit new musical requirements. A normal Ruckers transposing harpsichord with the range of *C/E* to *f‴* on the lower manual could accomodate the normal 17th-century French compass of *G′/B′* to *c‴* without altering the string spacing on the bridge or the scale, simply by aligning the keyboards. While the original Ruckers keys were usually retained in *ravalements* done in the Low Countries, French rebuilders routinely supplied new keyboards and actions in their own more delicate style. That this was already being done in the 1680s is suggested by the Richard harpsichord of 1688, which, with a false 'HR' rose and the date '1613' painted on the soundboard, was evidently intended to be passed off from the start as a Ruckers rebuilt with French keyboards and disposition. *Ravalement* also normally included the addition of a second choir of 8′ strings. Almost as many Ruckers or Couchet harpsichords with French keyboards and actions, but with unaltered cases and soundboards, survive from the first quarter of the 18th century, as do original French instruments of the period. Likewise attesting to their popularity in this period are workshop inventories of Nicholas and François Etienne (ii) Blanchet (see Hubbard, 1965), which list nearly as many 'Flemish' harpsichords as there are new instruments under construction. This popularity continued throughout the century, but the demand for an increased compass altered the purity of design of these early ravalements. A *G′* – *c‴* keyboard with the narrower French spacing could be fitted in to the case of a standard Ruckers double. The less common type of Ruckers double with chromatic basses could accomodate a *G′* – *c‴* compass without alteration of the spacing and, with French-style keyboards, the compass could be *G′* – *d‴* or even *e‴*. Further extensions of the compass, however, required more radical rebuilding of the old harpsichords.

The full five-octave compass of *F′* – *f‴*, which was to remain standard until the decline in harpsichord making at the end of the century, is already found in instruments made by Pierre Donzelague in Lyons in 1711 (London, private collection) and 1716 (Lyons, Musée Lyonnais des Arts Décoratifs). In Parisian harpsichords, however, the standard range from early in the century until about 1760 was *F′* – *e‴*, but *G′* – *e‴* was not uncommon. This is strange as the music of the period almost never exceeds G′ – d‴. The *F′* was used in one piece each by Rameau and Franois Couperin in their solo harpsichord works, but it was not in general use until the 1740s. Neither Couperin nor Rameau employed *e‴* in their solo works. Dagincourt used it in 1733 (*Pièces de clavecin*), but it was not often found until the *F′* was commonly written. The *e‴* seems to have fulfilled a sense of order: the keyboards were balanced with one natural after a group of sharps at each end. *G′* – *e‴* instruments, such as a Louis Bellot of 1742 (New York, Metropolitan Museum of Art) and a Jean Goermans of 1748 (USA, private collection), continued to be made almost to mid-century. Indeed, much of the repertory from the first half of the century is playable on instruments with the old compass beginning on *G′/B′*, especially if there are a divided *E♭* key and the *c♯‴* and *d‴* that were often crowded into the existing cases of old instruments undergoing *ravalement*. Perhaps the major advantage of chromatic basses beginning on *F′* or *G′* was not the availability of more accidentals in the bass but rather the more sonorous tone resulting from larger soundboards and longer bass strings. Already in Franois Couperin's first volume of *Pièces de clavecin* (1713), several pieces exploit this rich low tessitura. By 1760 the compass *F′* – *f‴* had become standard in Parisian harpsichords. During the late 1770s and 1780s a few harpsichords were made with the compass *E′* – *f‴*. The purpose of the added *E′* key is not known, but it may have been tuned to a lower note in some short-octave arrangement along with the seldom-used *F♯′* and *G♯′* keys.

Nicholas Blanchet, who was admitted to the guild in 1689, founded the most important dynasty of Parisian harpsichord makers, which included his son Franois Etienne (i), grandson François Etienne (ii), and Pascal Taskin, who worked for the last named and married his widow. Eight harpsichords by the Blanchets and seven by Taskin are known to survive. In the 1740s the Blanchets' connection with the court began, and shortly after the middle of the century their firm became 'facteur des clavessins du Roi'. During this time, besides their maintenance work for the court, they became increasingly occupied with the rebuilding of Ruckers and Couchet harpsichords into large five-octave French instruments. About as many of these rebuilds survive as do harpsichords entirely made by Blanchet and Taskin. Two other families were notable: Jean Goermans and his son Jacques (*c*1740–89), later Jacques Germain; and Henri Hemsch (1700–69), his brother Guillaume (1709–74) and their nephew Jean-Henri Moers (1734–93). About nine of the Goermans' harpsichords and nine by the Hemsch family survive; four of Henri Hemsch's date from the decade 1751–61, a remarkable survival rate. The majority of 18th-century French harpsichord makers were of the Parisian school, but there was a distinct though similar school in Lyons. 18th-century harpsichords from other parts of France are rare, and most of them are either archaic or are the occasional work of an artisan of another craft such as organ building.

A great portion of the energies of 18th-century French harpsichord makers appears to have gone into the massive rebuilding of older harpsichords, especially those of the Ruckers family. Since a rebuilt Ruckers harpsichord was worth several times as much as a new instrument in 18th-century Paris, such a diversion of the makers' efforts from building new instruments was clearly justified on a financial basis. It led not only to the most elaborate sort of rebuilding, including the conversion of narrow 45-note-compass single-manual instruments to five-octave doubles and the building of new harpsichords around the soundboards of old virginals but also to outright faking of new instruments to make them look like rebuilds. But as the rebuilding was intended to update earlier instruments to current musical requirements and not to preserve their antique qualities, the sound of a Ruckers or Couchet harpsichord rebuilt by Taskin represents late-18th-century Paris rather than 17th-century Antwerp.

The Blanchets and Taskin were famous for their work in this vein, and they applied to it all the ingenuity and craftsmanship found in the instruments they built in their

own names, producing neither crude enlargements in which extra notes were crammed into the bass (in effect sliding the keyboard towards the treble, thereby disastrously shortening the scaling) nor such dubious expedients as the jointing of extensions on to the wrest plank and belly rail. Rather, they used a wide variety of slightly differing techniques, determined by the nature of the original instruments. Of these, the most subtle and ingenious involved rebuilding the spine, in addition to the usual extending of the bentside and bridges and replacement of the cheekpiece, wrest plank and belly rail with new ones of appropriate length. The front of the original spine was cut down to the level of the soundboard. A tapered layer of new wood of the same size would then be added on the outside of the cut-down original spine; then a wholly new spine of the same height as the rest of the case, and long enough to reach the front of the instrument, would be glued on to the outside of the tapered piece. The result was simultaneously to provide more room at the front of the instrument for additional bass keys and to rotate the entire body of the instrument with respect to the strings. This rotation, in turn, had the effect of lengthening the scaling to compensate for the shortening produced by the addition of the new notes in the bass. For all their rebuilds, the Blanchets, Taskin and other reputable makers also supplied beautifully made new French-style keyboards and actions.

Except for their size, the construction of early 18th-century French harpsichords was very similar to that of Ruckers. The framing was a bit heavier, especially the upper struts, which were more numerous. A horizontal brace was glued to the back edges of the upper belly rail in two Blanchet harpsichords of 1730 (USA, private collection) and 1733 (Château de Thoiry). This brace or 'T' section, a normal feature of later Blanchet and Taskin harpsichords, enormously stiffened the belly rail, and struts running from it to the bentside, along with gap spacers between the wrest plank and belly rail, strengthened this critical area. In some instruments by other makers, including Henri Hemsch, the upper struts are set on edge and butt against the liners rather than lying flat under them. Case sides were sometimes of a softwood (spruce or fir) rather than poplar, which was invariably used by the Ruckers. Bentsides, however, were usually of poplar, since resinous softwoods are difficult to wet-bend. While Ruckers bentsides and those of most 17th-century French harpsichords are curved throughout their entire length, French bentsides early in the 18th century assumed a characteristic shape with the curve concentrated in the treble and the remainder, towards the tail, straight. Those of the 1730 and 1733 Blanchets are straight for almost two thirds of their lengths. This shape continued in use in the Blanchet-Taskin workshop and was also used by Henri Hemsch and others; completely curved bentsides occur only occasionally later in the century. Bentsides were never made to incorporate the tail in an S-curve. In the second half of the century, the framing became a bit heavier and more sophisticated, and the sides were a little thicker, walls of 18 mm being not uncommon and spines even thicker, up to about 24 mm. In Taskin's harpsichords the framing, liners, ribbing and 4′ hitch-pin rail are beautifully rounded.

The soundboard barring generally follows the Ruckers pattern but, especially in the first half of the century, was not so standardized. The 1707 Dumont and 1733 Blanchet lack cut-off bars, and the ribs perpendicular to the spine extend to the 4′ hitch-pin rail. The 1730 Blanchet has a normal cut-off bar but, like the 1707 Dumont, it has two ribs crossing the 8′ section of the soundboard around the midsection and tenor, and a third approaches the bass of the 8′ bridge from the 4′ hitch-pin rail. Harpsichords by Henri Hemsch, probably 1736 (Museum of Fine Arts, Boston), and by Hemsch's master, Antoine Vater, 1738 (private collection, France), have ribs parallel to the spine crossing the bridges. All known 18th-century French ribs were cut out to free the soundboard where they pass under bridges. Cross-ribs are not found in the later Blanchet and Taskin instruments and were only occasionally used by makers in the second half of the century, as in a Jacques Germain harpsichord of 1785 (Vermillion, South Dakota, Shrine to Music Museum) in which a rib crosses under the 8′ bridge in the tenor. Some makers, including Vater and Henri Hemsch, curved their cut-off bars to be parallel to the 4′ bridge.

The keyboards and actions of 18th-century French harpsichords continue the design of the previous century but are a little heavier, with wider jacks, a slightly wider key span (the three-octave measure typically 477 mm), and thicker key levers, especially in the lower manual. Boxwood arcades replaced the carved trefoils on the key fronts, and the sharps, instead of being solid bone, were composed of a thin bone slip glued to a black stained wooden base. The jack-slides and guides were still made of wood covered with punched-leather bearing surfaces, and the accurately made jacks were slightly tapered in width and thickness, fitting the slide only when at rest. These actions were light and quiet, and repeated very quickly. Apparently, very few single-manual harpsichords were made; these were almost always disposed 2 × 8′. The two-manual disposition of an 8′ and 4′ register on the lower manual, shove coupler, and an 8′ on the upper, with the 4′ between the 8′s and the lower 8′ plucking the longer strings was remained absolutely standard until the third quarter of the century.

After the middle of the century several additions to the standard French two-manual disposition began to appear. The buff stop, rare in the first half of the century, became almost universal. During the late 1750s harpsichords began to be equipped with a variety of foot- or knee-operated devices for producing crescendo effects and for changing registers without taking the hands from the keyboard. The first of these, developed by the Dutch maker Andries Veltman (Weltman, Wittman) in collaboration with a certain Dumontier, was advertised in Paris in 1758 and was demonstrated the following year to the Royal Academy of Sciences. In addition to knee levers to control the registers it was provided with a hammer action and glockenspiel. Of more lasting significance was a fourth register having jacks fitted with plectra of soft buff leather (*peau de buffle*) added behind the three registers of the normal two-manual disposition as a special solo stop. The *peau de buffle* jacks pluck the same strings as the normal quilled lower-manual 8' jacks, which were intended to be disengaged when the fourth register was in use. Most writings of the period credit the introduction of the *peau de buffle* register to Taskin, although Jean-Benjamin de La Borde (*Essai sur la musique*, Paris, 1780) ascribed the initial idea to the prominent organist, harpsichordist and composer Claude-Bénigne Balbastre, who is known to have had a harpsichord fitted with this

device in 1770. Another claimant was a certain de Laine, who in 1769 announced an instrument fitted with leather plectra and a pedal to change the registers. Soft *peau de buffle* plectra tend to stroke the strings rather than pluck them. Thus a certain amount of dynamic nuance is made possible by touch alone. Except, perhaps, for the occasional three-register harpsichord provided with *peau de buffle* as a substitute for the customary quill of the lower-manual 8′, *peau de buffle* was normally only used as a fourth register in harpsichords also provided with knee levers to change the stops. As devised by Taskin in 1768 and found in most of the extant late 18th-century harpsichords made or rebuilt by Taskin or other Parisian builders, five or six pommels, to be raised by the knees, are held in the front rail of the harpsichord's stand. In order from left to right these control: a *decrescendo*, which gradually removes the 4′, then the lower-manual quilled 8', then the upper 8′, leaving the *piano* tone of the *peau de buffle*; the 4′; the lower-manual quilled 8′; the shove coupler (in some instruments this pommel is absent and the coupler is controlled by hand in the usual manner); the *peau de buffle*; and a batten that raises all the *peau de buffle* jacks when they are not in use in order to keep the touch as light as possible.

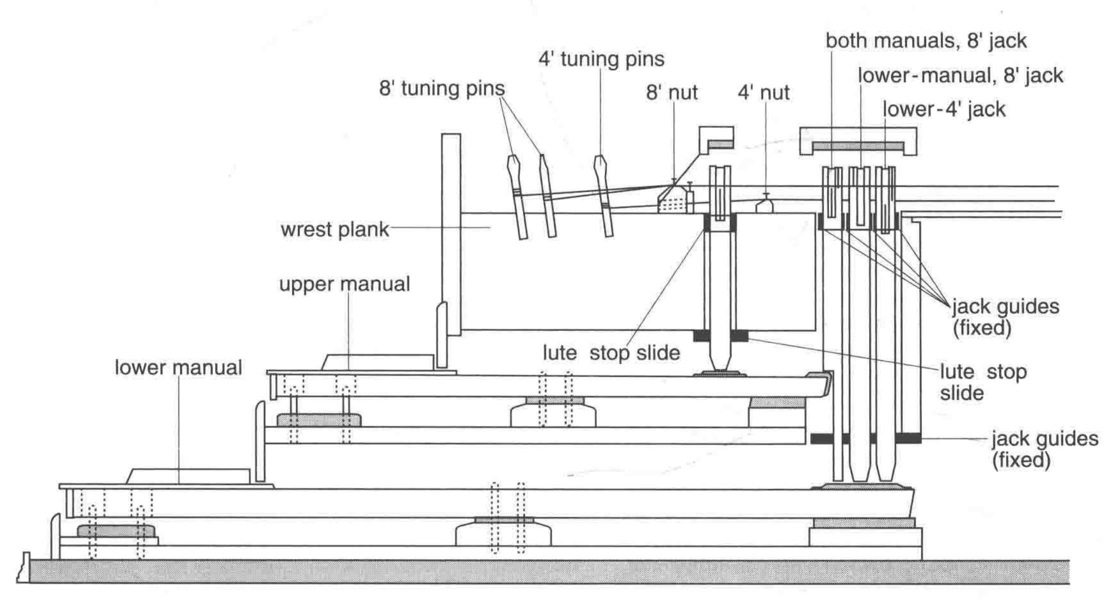
The *peau de buffle* and knee levers or pedals to change the stops came into being at about the same time as the piano was being introduced to France from Germany and England. Grand pianos by Johann Heinrich Silbermann of Strasbourg were known in Paris by 1759, and in 1763 Balbastre owned a *clavecin à marteaux* (grand piano) made by Blanchet. Another was in Blanchet's workshop at the time of his death in 1766. Although the repertory associated with the early German-style grand pianos and the English square pianos which became very popular in Paris in the late 1760s was in the Italian and German styles, the addition of knee levers and *peau de buffle* to the beloved French harpsichord was manifestly an attempt, far more successful than most such efforts, to graft on to it some of the qualities of the piano, which itself was incapable of realizing works in the highly idiomatic style of the *clavecinistes*. Late 18th-century French harpsichords with these devices possess all the musical qualities of earlier harpsichords, and the *peau de buffle* provides the option of a voluptuous tone which is quite similar to that of pianos by Cristofori and the Silbermanns.

Blanchet and Taskin were famous for their work in this vein, and they applied to it all the ingenuity and craftsmanship found in the instruments they built in their own names, producing neither crude enlargements in which extra notes are crammed into the bass (in effect sliding the keyboard towards the treble, thereby disastrously shortening the scaling) nor such dubious expedients as the jointing of extensions on to the wrest plank and belly rail. Rather, they used a wide variety of slightly differing techniques, determined by the nature of the original instrument. Of these, the most subtle and ingenious involved rebuilding the spine, in addition to the usual extending of the bentside and bridges and replacement of the cheekpiece, pin-block and belly rail with new ones of appropriate length. The front of the original spine was cut off at the belly rail and the top was cut down to the level of the soundboard. A tapered layer of new wood of the same size would then be added on the outside of the cut-down original spine; then a wholly new spine of the same height as the rest of the case, and long enough to reach the front of the instrument, would be glued on to the outside of the tapered piece. The result was simultaneously to provide additional room at the front of the instrument for additional bass keys and to rotate the entire body of the instrument anti-clockwise with respect to the strings. This rotation, in turn, had the effect of lengthening the scaling to compensate for the shortening produced by the addition of the new notes in the bass. New keyboards were, of course, fitted, and Blanchet's and Taskin's are made with unequalled elegance and care. No weighting is used and each key is carved into balance, a factor which contributes enormously to the light and even touch.

The plan of the average 18th-century French harpsichord more nearly follows that of the chromatic rather than the short-octave Ruckers transposer. This design had shorter tenor scaling to keep the tailpiece from becoming too wide in a wider instrument of the same length. The French tonal ideal around 1700 was that of Ruckers, but making larger instruments resulted in a grander and smoother tone. Although the 'presence' and immediacy of a small instrument were lost, the sound was no less transparent. As the century passed, the tone grew more complex and less direct; nevertheless even the late Taskins never lost the balance bewteen attack and sustaining power that permits cleanness of articulation. The declamatory style of French keyboard music from the 17th century to the Rococo period required this sensitivity to articulation, and their harpsichords met the demand well. Indeed, although there is little evidence that French harpsichords were exported to other countries during the 18th century, it has been recognized during the 20th-century revival of the harpsichord that the classic five-octave French double perhaps comes closest to the ideal of an all-purpose instrument, versatile enough to be a satisfactory medium for the interpretation of harpsichord music of all countries and periods. Thus modern harpsichords modelled after the work of Taskin and other 18th-century French makers have been in widespread use during the last half of the 20th century.

Whether new or rebuilt, a French 18th-century harpsichord was a major piece of decorative furniture. The soundboards were decorated in a more elaborate version of the Flemish style, the cases were painted or lacquered in any of a variety of fashionable styles and the instruments were equipped with elaborate six-, seven- or eight-legged bases often carved and gilded in one of the royal styles. Simpler instruments were painted in one or two colours, panelled with gold bands and mouldings and fitted with less elaborate bases but still in one of the royal styles (fig.9). Despite the use of walnut and marquetry in 17th-century harpsichords, and the superb quality of veneered furniture in 18th-century France, French harpsichords seem never to have been veneered.

*(ii) England.* The few surviving harpsichords made in England before the 1720s follow the model of late 17th-century instruments (see §3(ii)(b) above). The standard 18th-century national type seems to have crystallized slightly earlier than in France, namely in the work of Hermann Tabel (*d* 1738), a builder, trained in Antwerp, who moved to London in about 1700. Both of the makers whose firms dominated English harpsichord building in the 18th century, Burkat Shudi (1702–73) and Jacob Kirkman (1710–92), worked in Tabel's shop and both built instruments strikingly like the sole surviving example



*9. Harpsichord by Pascal Taskin, Paris, 1769 (Russell Collection of Early Keyboard Instruments, Edinburgh)*

of Tabel's work, a double-manual harpsichord dated 1721 (fig.8).

A typical Shudi or Kirkman double has a 2 × 8′, 1 × 4′ specification, disposed so that one 8′ register, known as the dogleg, is available from both manuals, while the lower manual has the second 8′ and the 4′ register, and the upper manual has a lute register as an alternative to the dogleg. In addition, a buff stop on a Shudi acts on the lower-manual 8′ strings, and on a Kirkman on the dogleg 8′ strings (fig.11). Their cases are made of oak, and are veneered mostly in walnut in early examples and mahogany in later ones. All are invariably cross-banded with a wide range of stringings, and some, particularly those of Kirkman, have spendidly rich marquetry in the keywell. The instrument is supported on a trestle stand with four legs, which vary throughout the 18th century from turned George II to square Chippendale; occasional special examples have rather ungraceful cabriole legs curving outwards from the level of the trestle's lower stretchers. The soundboards are not decorated with paintings, and Shudi soundboards do not have a gilded metal rose; the barring and case bracing are rather like those of a Ruckers harpsichord. Like the bottom, all the braces are pine. The lower ones are not as tall as in a Ruckers instrument; there are only two transverse bottom braces in addition to the lower belly rail, but these are supplemented by a diagonal brace running along the bottom from the intersection of the rear brace and the bentside to the centre of the forward brace. In addition, there are two or three longitudinal braces running upwards from the front bottom brace to the upper belly rail. The upper-level braces are more numerous than on a Ruckers harpsichord, where there are three set nearly parallel to one another and at a slightly oblique angle to the spine. In a Kirkman or Shudi harpsichord there are four such braces which, however, are set vertically rather than flat, so that they bear on the face of the liner rather than merely being nailed to its underside. These four are supplemented by a fifth, heavier one, that passes from the bentside to the upper belly rail in the crucial treble area. (For excellent iluustrations fo the inner construction of a kirkman harpsichord see *Kielklaviere*, 1991, p.146, and Koster, 1994, p.99.) The construction of a single-manual Kirkman or Shudi is identical to that of a double, except that while

*11. English two-manual harpsichord action, 18th century*

Shudi's singles often include a lute stop, only one Kirkman single is reported to have had one, and this report must be treated with caution. Occasional examples of singles by both makers lack the 4′ as well.

Except in matters of decoration, these instruments changed little throughout the century, apart from a shift in the plucking-points of Shudi harpsichords after 1770 that produces a rounder and less incisive tone in the later instruments (a change in line with the occasional substitution of leather for quill plectra in the lower-manual 8′ jacks), and the addition of the pedal-operated mechanisms described below. The overall lengths of Kirkman's harpsichords (and, correspondingly, of their longest *F′* string) varied over the years, being around 180·3 cm in 1745, decreasing to around 172·7 cm in the early 1760s and increasing again to around 177·8 cm in the 1770s and 80s. The reason for these changes is not known.

Tabel's five-octave *F′* to *f‴* keyboard had lacked the *F♯′* (presumably for reasons of visual symmetry), and Kirkman and Shudi, like other English builders, followed this practice until about 1780, when the *F♯′* was included as a matter of course.

A minor difference between Shudi and Kirkman harpsichords concerns the arrangement of the stop-knobs in two-manual instruments. On Shudi double-manual harpsichords the three stop-knobs at the left side of the nameboard control (from left to right) the lute stop, the 4′ and the buff stop, whereas in a Kirkman the order is buff stop, lute stop and 4′; both have 8′ stops located at the right side of the nameboard with the dogleg controlled by the left-hand knob and the lower manual 8′ controlled by the right-hand knob. As a result of this arrangement, one can rapidly engage whichever of the unison stops may temporarily have been disengaged simply by squeezing the knobs together. Although Kirkman is known only once (1772) to have built an instrument with a range greater than five octaves (a double with a range of *F′* to *c‴*), Shudi regularly made instruments with a range of *C′* to *f‴*, of which 12 dating from 1765 to 1782 have survived.

The tone of a Kirkman or Shudi harpsichord is enormously rich and powerful; whereas that of a French harpsichord may be compared to the sound of a woodwind ensemble, the tone of these developed English instruments, with their brilliant trebles and imposing basses, may be compared to that of a brass band. The sound thus lacks the subtlety of a French instrument but more than compensates by its volume and sensual impact. As is true of many of the harpsichords made in the second half of the 18th century – that is, after the great age of harpsichord composition – the sound of these instruments sometimes tends to call attention to itself rather than merely serving as a vehicle for projecting the music, a quality that may in abstract terms be viewed as a defect despite its splendour. (For further discussion of tone and voicing *see* KIRKMAN.)

Beginning no later than the early 1760s, English harpsichords were customarily fitted with crescendo devices. The so-called MACHINE STOP of Kirkman and Shudi disengages the 4′ register and then the front 8′ register as a pedal is depressed (on double-manual instruments, since the disengagement of the front 8′ register would silence the upper manual, it simultaneously engages the lute stop); thus when the pedal is fully depressed the registration on the upper manual of dogleg 8′ is replaced by lute stop, and that on the lower of dogleg 8′, lower-manual 8′ and 4′ by lower-manual 8′ alone. In both single- and double-manual instruments, the machine stop can be disengaged when desired to permit normal hand-stop operation. Small variations on this arrangement may be found in the harpsichords of Thomas Haxby and of Longman and Broderip. By 1766, the machine stop was supplemented by a second crescendo device, the SWELL, which enabled the performer to open either a section of the harpsichord's lid (if not already raised) or a series of louvres covering the soundboard (fig.12). The two devices used in conjunction with one another produce a surprisingly wide and effective crescendo, beginning with the *pianissimo*of the lower-manual 8′ alone with the lid or louvres closed, followed by the successive addition of the front 8′ and the 4′ and finally the gradual opening of lid or louvres to permit the *fortissimo* of the full harpsichord.

*(iii) Italy.* Most of the known 18th-century Italian harpsichord makers were active in Florence and among these BARTOLOMEO CRISTOFORI was pre-eminent. His few surviving harpsichords show a number of refinements in design aimed at better structural or tonal performance. Those he influenced included not only his assistant Giovanni Ferrini, but also makers who worked in other towns, such as Giuseppe Solfanelli (active in Florence and Pisa) and Giuseppe Moria Goccini of Bologna.

Even in the 18th century *C/E–c‴* was still a widely used compass (as also in Italian organs of the same period); for the accompaniment of the human voice this range was presumably sufficient. However, the once common *C/E–f‴* range became practically obsolete. Of compasses reaching below *C*, the majority started on *G′A′* (i.e. without G♯′). Those having a *G′/B′* short octave were no more common than in the 17th century. More chromatic compasses beginning on *G′* were used than in the 17th century but were only slightly more common than *G′/B′* compasses. Compasses starting on *F′G′A′* became more popular than previously, being produced in almost the same numbers as *G′A′* ranges. Most keyboard ranges did not exceed *c‴*, even when starting on *F′*, but a few reached f‴, or even *g‴*.

After 1700 the majority of dispositions were 2×8′, but four instruments have survived which had three 8′ registers. Six 2×4′ harpsichords are also known. Although many 16th-century instruments had only a single 8′ register, this disposition became a rarity after 1700. In contrast to instruments from north of the Alps, a 2×8′, 1×4′ registration remained rare in Italy. A general lack of interest in the possibility of registration changes is suggested both by the rarity of two-manual Italian harpsichords and by the absence of stop levers in many 18th-century Italian harpsichords.

Although some jacks insurviving instruments now contain square slots for leather plectra it is likely that most if not all are later modifications; the preference at the time was for bird quill. Some experimentation is recorded in the description of the CEMBALO ANGELICO, invented in Rome in 1775 (see Russell, 1959, appendix 2), which enabled a range of different tone colours to be produced.

It is easier to draw conclusions about 18th-century scalings than about those of the 16th and 17th centuries. Documentary evidence and the design of scales combine to show that brass wire was used in most designs, where

*12. Harpsichord by Shudi and Broadwood, London, 1775, showing the swell in the open position (Gesellschaft der Musikfreunde, Vienna, on loan to the Musikinstrumente Sammlung, Kunsthistorisches Museum, Vienna)*

a *c″* of between about 25 cm and 28.5 cm is found (see Wraight, 1997). Some instruments by Cristofori and his workers show the combined use of iron and brass scales, with separate bridges, in order to overcome space restrictions. The scaling of both harpsichords and virginals suggests that a range of 8′ pitch was used throughout Italy which covered a whole tone, with *c″* measuring 25 to 28.5 cm. Within this range of a tone in there were in Florence three further divisions rather than two semitone sizes (see §2(i) above). It is probable that this whole-tone range of pitches was in simultaneous use, although scales of 25 cm are first found around 1740. Thus, there is no clear evidence from these instruments that pitch rose in the 18th century compared with earlier times; rather, the range of pitches for which instruments were made remained at a constant level from the 16th to the 18th centuries. The evidence of 18th century pitches is mainly from Florentine harpsichords; virtually none have been identified from venice, Milan or Rome. In 1704 Goccini modified a 1530 harpsichord by Alessandro Trasuntino from 1×8′, 1×4′ disposition and *C/E–f‴* compass to 2×8′ with *G′/B′–c‴* another instrument, by Vito Trasuntino (dated 1560; Staatliches Institut für Musikforschung, Berlin), was rebuilt with a shorter scale. This gives the impression that the pitch was raised, but if brass were is used instead of iron the pitch is lowered by a minor whole tone.

Late 20th-century research on harpsichords of all countries attempted to elucidate the ways in which instruments were strung in order to understand better the makers' intentions and permit more faithful restorations. Comparison of the few known diameters of old wire with archival and documentary sources and the identification of old wire bobbins shows that Nuremberg wire was used in Italy in the 18th century. One basic principle of stringing has been found (with only slight variations), mainly used by Cristofori and other Florentine makers, which strung the top ten notes with gauge 10 wire, the next nine with gauge 9, and so on down to gauge 2.

*(iv) Germany and other European countries.* Compared to the number of surviving 18th-century harpsichords from Italy, France, England and the Low Countries, there are progressively fewer from Germany, Scandinavia, Portugal and Spain, and hence progressively less information is available concerning the character and development of the instrument in these areas. This is specially regrettable since Germany and Spain in particular produced so much harpsichord music of interest.

There were arguably four schools of harpsichord making in Germany during the 18th century, in Hamburg, Berlin, Saxony and Thuringia, Hamburg was a major centre whose sphere of influence extended to Stockholm in the north and Hanover in the south, and is the only

*13. Harpsichord by Christian Zell, Hamburg, 1728 (Museum für Kunst und Gewerbe, Hamburg)*

school represented by an appreciable number of surviving examples. Two harpsichords (one a reworking of an instrument originally built by Johannes Ruckers in 1618) survive by Johann Fleischer and three by his younger brother Carl Conrad Fleischer. There are six extant harpsichords signed by Hieronymus Albrecht Hass, two by his son Johann Adolph Hass and three by Chistian Zell, who married Carl Fleischer's widow. Harpsichords of the Hamburg school vary greatly in size, compass and disposition, but are all built in essentially the same manner. Coniferous wood is used for the case sides, the baseboard and the lid, and beech for the wrest plank, nuts, bridges and jackrail. As with Flemish harpsichords the case sides are glued and dowelled to the upper surface of the baseboard; Flemish influence is also evident in the soundboard layout and in the bridge cross section of early Hass harpsichords which is similar to that of Ruckers harpsichords. Rather than a bentside and an angled tail, however, Hamburg harpsichords are characterized by an S-shaped bentside, made either of oak or lime. Full-depth braces cross the case from the bentside to the spine, with no upper-level bracing. The natural keys are veneered with ivory or tortoiseshell and the sharp blocks are of lime or beech (often ebonized) covered with ebony, ivory or tortoiseshell. The natural fronts decorated with embossed paper, incised paper glued to a red backing, or small blocks of ebony or ivory in which a semicircular moulding has been cut: Key levers of single-manual harpsichords and of the lower manual of double-manual harpsichords are guided by wooden or whalebone slips riding in the vertical slots of a rack. Upper-manual keys are guided either by vertical pins positioned between the tails of the key levers or by vertical pins positioned in mortises cut in the centre of the key tails. The three-octave span of the natural keys ranges from 49 to 50 cm. On the double-manual harpsichords built by H.A. Hass in 1723 (Copenhagen, Musikhistorisk Museum) and 1734 (Brussels Conservatory) there are small padded blocks on the underside of the upper-manual keys and on the upper surface of the lower-manual keys. The manuals are coupled together either by pushing in the upper manual (1723) or by pulling out the lower one (1734). In the harpsichord built by J.A. Hass around 1760 (Yale University, New Haven, Connecticut), short doglegs are provided for the upper-manual 8′ jacks; small padded blocks on the lower-manual keys are positioned under the doglegs so that when the lower manual is pushed in the lower-manual keys lift the upper-manual jacks without the upper-manual keys having to be moved. Most Hamburg harpsichords have iron scales of about 36 cm, but a few instruments, including the 1728 Zell (Museum für Kunst und Gewerbe, Hamburg; fig.13) and the 1740 Hass (Puyana Collection, Paris), have scales of about 34 cm; these harpsichords may have been intended by their makers to sound about a semitone higher than the longer-scaled instruments.

Although some Hamburg-built harpsichords have the classic 2 × 8′, 1 × 4′ disposition, five instruments by H.A.

Hass are exceptions. One made in 1726 (Leuvsta Bruk Manor House, Sweden) has the typical 16th-century Italian disposition of 1 × 8′, 1 × 4′, while two others originally had three choirs of 8× strings. The Hass 1723 harpsichord is disposed 3 × 8′, 1 × 4′, with the 8′ nut stepped such that there are two levels of 8′ strings: two sets are positioned on the upper section of the nut with third set positioned on the lower section and passing through the nut the tuning pins. A 1721 harpsichord by Hass (City Museum, Gothenburg) survives as a single-manual piano, but seems to have originally had two manuals and the unique disposition of 3 × 8′, 2 × 4′. Various 18th-century German makers (including Fleischer, Mietke, Harass, Hildebrandt, Silbermann and Stein) are now thought to have built harpsichords with a set of 16′ strings, No two of the three surviving Hass harpsichords with a 16′ register are exactly alike, but their 16′ strings are arranged in the same ingenious fashion. Inside the case a low curving rim is attached to the deep frame members and follows the line that the bentside of a normal instrument would take. This rim serves as a hitch-pin rail for the 8′ strings. Beyond it and at a slightly higher level there is a completely separate soundboard for the 16′ bridge, and the 16′ strings are hitched to the pins driven into the lining of the bentside along the far edge of this soundboard. As a result, the 16′ bridge does not have to be pierced to permit the 8′ strings to be hitched at the bentside, and the layout of the 8′ and 4′ strings, which still comprise the basic core of the harpsichord, is undisturbed. The 1734 double-manual harpsichord by H.A. Hass has the compass *G′* to *d‴* and the disposition 1 × 16′, 2 × 8′, 1 × 4′, lute. The 1740 Hass, which is the only unquestionably genuine three-manual historical harpsichord still in existence, has the compass *F′/G′–f‴*, and the disposition 1 × 16′, 2 × 8′, 1 × 4′, 1 × 2′, lute. The upper two manuals of this instrument provide a lute stop on the upper manual, a dogleg 8′ register played by both the upper and the middle manuals, and a 4′ and a second 8′ playable on the middle manual only. The doglegs reach down to the middle manual, and there is no coupler between these two keyboards. The 16′ and the 2′ are confined to the lowest manual, which (like the keyboards of some organs) can be pushed entirely into the case like a drawer for playing on only the 8′ and 4′ registers, but can be pulled partly forward so as to play the 16′ and 2′ by themselves, or further forward to permit all the registers except the lute stop to sound at once from the lowest manual. The remaining Hass instrument with a 16′ stop has only two keyboards, but compensates by having two rows of 2′ jacks (both playing the same strings), one on the upper manual and one on the lower. Its date is questionable, but comparison with Hass clavichords suggests about 1760. As on the 1734 double, buff stops are provided for the lower-manual 8′ and the 16′, and the lower-manual 2′ (like that on the 1740 triple) extends only from *F′* to *c″*. This curtailment is necessary because, even with the narrow jackslides used on these instruments, the gap between the wrest plank and the belly rail required for the five slides (and thus the minimum distance between the 2′ nut and the 2′ bridge) must be so wide that no string stretched across it could be tuned appreciably higher than the *c⁗* equivalent to *c″* at 2′ pitch. This explains why the sixth slide carrying the jacks of the upper-manual 2′ on the instrument of around 1760 goes only to *b*.

The outer case and lid are always painted, sometimes with chinoiserie, while the inside of the lid often bears a painting in oils, with subjects including (on instrument by H.A. Hass. *The Grand Concert in the Garden* (1723) and *The Trojan Horse* (1734). The keywell area above the keyboard is usually veneered in hardwoods and exotic materials. Most soundboards are decorated with painted flowers, the near edge being reserved for the signature and sometimes small groups of Classical or pastoral figures. Only the harpsichords of the Fleischer brothers have a soundboard rose, which is geometrical and multi-layered. The stand for the H.A. Hass harpsichords of 1726, 1732 and 1734, as well as the 1728 Zell, appear to be original, and consist of turned and carved legs between an upper and a lower stretcher.

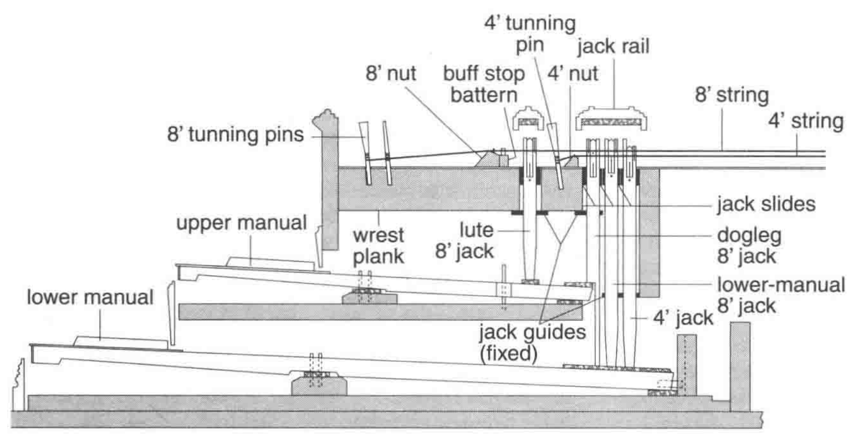
Only two harpsichords survive from Hanover: a single-manual of 1738 by Christian Vater with the compass *G′/B′–e‴* (Germanisches Nationalmuseum, Nuremberg), and a claviorgan of 1712 by Hermann Willenbrock with the compass *C*, *D* (without *C♯*) to *c‴* (Metropolitan Museum of Art, New York). Like the Hamburg instruments, both have S-shaped bentsides; the keywell veneering of the Willenbrock is reminiscent of the work of Zell. There are, however, various differences between these instruments and those of Hamburg: the Vater, for example, has a brass scale of 27 cm, and both instruments have ebony rather than ivory natural plates.

Harpsichord builders active in Berlin during the 18th-century included Johann Hohlfeld (1711–71), Johann Straube (1725–1802) and Johann Oesterlein (*b* 1728/9), who is represented by a single surviving harpsichord dated 1792 (Berlin Museum). The Berlin school is, however, dominated by the court instrument builder Michael Mietke, whom J.S. Bach visited in 1719 to take delivery of a double-manual harpsichord for the Duke of Anhalt-Cöthen. A single-manual harpsichord signed by Mietke and dated 1710 survives (Hälsinglands Museum, Hudiksvall, Sweden). According to Kilström (1994) this instrument, constructed mostly from walnut, has the compass *G′/A′–c‴* and the disposition 2 × 8′. Two further harpsichords (Schloss Charlottenburg, Berlin) have been attributed to Mietke and dated to before 1713: a single-manual white harpsichord disposed 2 × 8′, whose compass was originally *G′/A′–c‴*, and a double-manual black harpsichord disposed 2 × 8′, 1 × 4′, originally with the compass *F′/G′A′–c‴* (the compasses of both were later extended to *F′/G′–c‴*). All the Mietke instruments have S-shaped bentsides and use box slides to guide the jacks rather than upper and lower registers. The *c″* scaling of the double-manual Mietke was originally 29 cm which, when compared with the shorter 27·5 cm scale of the Hudiksvall Mietke, would suggest that both instruments were designed to be strung in brass but intended to sound at two different pitches, about a semitone apart.

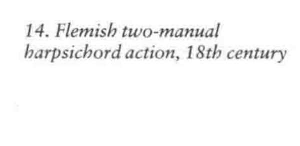
Surviving harpsichords from the Saxon school include a double-manual instrument by Jacob Hartmann (Bach-Haus, Eisenach) and a double-manual instrument attributed to Gottfried Horn (Museum für Kunsthandwerk, Dresden). There are five extant harpsichords signed by members of the Gräbner family, and two vis-à-vis harpsichord-piano combination instruments by Johann Andreas Stein. These instruments all differ significantly from those of the Hamburg school: the cases, made of hardwood or veneered, are not painted and have angled tails, and the soundboard barring includes transverse ribs

running under the bridges, Although only one of the Stein combination instruments now includes a 16′ stop, there is documentary evidence (see Henkel, 1990) of a harpsichord by Gottfried Silbermann which was also disposed with a set of 16′ strings.

The possible existence of a Thuringian school of harpsichord building has been given weight by Krickeberg's attribution (1995) of an unsigned harpsichord (the so-called 'Bach harpsichord', Berlin Museum, no.316) to either Johann Harass the elder or Johann Matthias Harass of Gross-Breitenbach, on the basis of the instrument's similarity to a double-manual harpsichord (Schloss Museum, Sondershausen) believed to have been signed by Harass. Krickeberg and others have suggested that the Berlin instrument was designed to include a set of strings at 16′ pitch.



The few extant 18th-century Austrian harpsichords have cases mostly of solid walnut or walnut veneer with a double-curved bentside. The only signed instruments are by Viennese makers; the earliest certainly from Vienna was made in 1747 by the organ builder Johann Christoph Pantzner (*d* 1761). Some have a short bass octave with several divided keys; as Walter (1972) has shown, Haydn must have had access to an instrument of this kind during his early period. The short scaling of some Austrian instruments indicates a high pitch; stringing throughout with brass wire is possible. Virtually nothing is known of any 18th-century harpsichord building in what are now Czechoslovakia, Poland or Hungary, although the craft seems to have been practised there during the 16th and 17th centuries.



The double-curve bentside began to appear in Spanish harpsichords at the end of the 17th century, perhaps due to the influence of imports from Hamburg. This style is shown in a harpsichord, later converted into a piano, labelled as being made in Seville in 1734; a photograph of a lost five-octave, single-manual harpsichord made there in 1754; and a harpsichord-claviorgan, also later a piano, bearing the label of Tadeo Tornel of Murcia and the date 1777. In the latter part of the century Juan del Mármol made instruments combining harpsichord and piano actions. Perhaps the greatest Spanish harpsichord maker of the period was Diego Fernández Caparrós (*fl* 1722–75). None of his instruments survives, but there is documentary evidence that for Queen María Bárbara he made two 61-note harpsichords, at least one smaller one, and a *cembalo di registro*, a five-register instrument with button pedals for operating the wire-strung, gut-strung and flute-like registers, some of which were divided. Farinelli owned a Spanish transposing harpsichord probably by Fernández. The only surviving signed harpsichord of Catalonian origin is a single-manual 2 × 8′ instrument with a compass of *C*/*E*–*c*‴ made in Barcelona in 1743 by Salvador Bofill.

The only catalogued Danish 18th-century instruments of the harpsichord family that survive are a small *C*–*d*‴ virginal from 1762 (Rosenborg Castle, Copenhagen) by Christian Ferdinand Speer, a Silesian émigré active in Copenhagen, and a one-manual harpsichord of 1770 (Falsters Minder Museum, Nykøbing) by Moritz Georg Moshack, a Copenhagen maker. The Speer virginal has a short *c*″ scale of only 17·5 cm and was probably designed to be strung in iron and to sound an octave above normal pitch. The 1770 Moshack has an S-shaped benstside and case dimensions so close to those of the 1764 Hass (Russell Collection, Edinburgh) that it seems likely that Moshack either learnt his craft in Hamburg or copied an imported Hamburg instrument.

In Sweden, a number of instruments and some secondary evidence indicate that harpsichord making flourished during in the 18th century, especially after 1756, when the government banned the import of musical instruments to encourage native builders. A one-manual five-octave harpsichord (Musikimuseet, Stockholm) dated 1748 is signed by Philip Jakob Specken, who learnt his craft in Dresden before moving to Stockholm. Niels (or Nicolas) Brelin, a clergyman, is known to have built an upright harpsichord (clavicytherium) in 1741 with eight registration pedals. A contemporary sketch printed in the proceedings of the Swedish Royal Academy shows that it had a five-octave compass and that its disposition included a 4′ stop. Brelin is said to have made two trips abroad to study instrument building, but where and with whom he worked is not known. The harpsichord signed 'Johannes Broman, Stockholm 1756' (Musikmuseet, Stockholm) is a five-octave two-manual instrument similar in construction to a Hamburg harpsichord (including an S-shaped bentside). It is disposed 3 × 8′, 1 × 4′, lute, and designed, incredibly, to have iron strings throughout the compass; it consequently measures 360 cm. The two-manual five-octave instrument signed 'Gottlieb Rosenau, Stockholm 1786' (Musikhistorisk Museum, Copenhagen), while also similar in style to contemporaneous Hamburg instruments, has strings which foreshorten in the usual way and a standard case length of 276 cm.

Few 18th-century harpsichords from the northern Netherlands are recorded as extant: two instruments made in Amsterdam in the 1760s, a 1787 instrument from Leiden, and from Roermond a curious survival of 17th-century style, dated 1734. The Roermond instrument (Museum Plantin-Moretus, Antwerp) is an unusual two-manual harpsichord with a virginal filling out the space between the bentside and the extended cheekpiece. The harpsichord portion is reminiscent of an earlier transposing double after alignment. The compass is certainly the normal late 17th-century Flemish range, *G*′/*B*′–*c*‴, the lower manual plays sets of 8′ and 4′ jacks, and the upper controls a dogleg 8′ and a second set of 4′ jacks playing on the same strings as those of the lower-manual 4′. The virginal, with a keyboard to the left, has a compass of *C*/*D*–*c*‴. The maker, Johannes Josephus Coenen, was a priest and the organist of Roermond cathedral, and seems to have made instruments in his spare time. In sharp contrast a modern, large two-manual instrument with a 16′ stop was advertised for sale in Amsterdam just a year later by Rutgert Pleunis. His career as one of the most inventive keyboard instrument builders of his time was centred from 1741 in London, where he was known as Roger Plenius. Unfortunately no instrument of either his Dutch or English period survives. A harpsichord now at Leipzig, unsigned but with the initials 'L.V.' in the rose, bears the date 1766 on the highest key (*f*‴) and its place of origin, Amsterdam, on the lowest (*G*′/*B*′). A one-manual harpsichord of 1768, by C.F. Laeske of Amsterdam (private collection, New York) is disposed 2 × 8′, 1 × 4′ and has the compass *C*–*f*‴. A harpsichord by Abraham Leenhouwer of Leiden (Hague, Gementenmuseum), a standard two-manual instrument of five-octave compass disposed 2 × 8′, 1 × 4′, is remarkable not only for its late date, 1787, but also for the archaic

*14. Flemish two-manual harpsichord action, 18th century*

stop-knobs, which are extended register ends protruding through the cheekpiece. This feature, also found in the Coenen, 'L.V.' and Laeske harpsichords, seems to have survived longer in the northern Netherlands than anywhere else.

From the southern Netherlands a considerable number of instruments remain to substantiate the written record. In the early 18th century new harpsichords began to be made in the form characteristic of earlier instruments of the Ruckers type after they were enlarged in the late 17th century. Two 8′ stops rather than a single unison register were the rule. Two-manual instruments had either three sets of jacks (one each for the two 8′ and one 4′ choirs) or four, as in the earlier transposing harpsichords. In the latter case, the fourth set would be used either as a second 4′ stop playing on the upper manual (as on the Coenen harpsichord of 1734), or for a cut-through lute stop, plucking one of the unison choirs close to the nut. But quite a few simpler instruments continued to be produced, even in the late 18th century. Albert Delin of Tournai, for instance, seems to have done without a second manual or 4′ stop, although he was a builder of great skill and refinement, judging from his surviving ten or so instruments dated 1750 to 1770. In addition to making conventional harpsichords and spinets, Delin also produced clavicytheria that are outstanding for both their mechanical excellence and their rich sound. Three examples survive (Berlin Collection; Brussels Conservatory; Gemeentemuseum, The Hague).

Jérôme Mahieu of Brussels (*d* 1737) was probably active before 1732, the earliest date recorded for him, He built harpsichords with both one and two manuals, generally with three registers (2 × 8′, 1 × 4′) but occasionally with only two, in which case he preferred the older 1 × 8′, 1 × 4′ disposition to the more modern 2 × 8′. The compass was either of 58 notes (*G′–e‴*) or 61 (*F′–f‴*). (The 1732 Mahieu instrument with an apparent compass of *D′–d‴* reported in Paris in 1952 was presumably altered by a 19th-century restoration from the original *F′–f‴* range). Also active during the mid-18th century was Jacobus Van den Elsche of Antwerp. One instrument (Vleeshuis Museum, Antwerp), dated 1763, survives from his workshop; apart from its exceptionally sturdy construction it is a standard two-manual five-octave harpsichord disposed 2 × 8′, 1 × 4′. Another instrument (formerly in Berlin; destroyed 1945) was ostensibly dated 1710, seven years before Van den Elsche's entry into the Guild of St Luke, and signed to indicate that it was rebuilt in 1790 by Johann Heinemann of Antwerp. A one-manual harpsichord by Heinemann (Brussels) with a *C/E–d‴* compass, disposed 2 × 8′, is dated 1793; this would make it apparently the latest extant Flemish harpsichord, but the short-octave keyboard is strangely archaic in view of the date.

Members of the Dulcken family were distinguished harpsichord builders in the region during the 18th century. At least eight harpsichords by Johan Daniel Dulcken (*d* 1757), who worked mainly in Antwerp, are known (instruments made in Brussels and bearing later dates are the work of his sons). His harpsichords tend to have long scales, the single-manual harpsichord of about 1740 (Edinburgh, private collection) having a *c″* scale of nearly 39 cm. Consequently the cases are long, his two-manual instruments being some 260 cm. Occasionally he used a singular type of construction with both an inner and an outer bentside. All his mature instruments have a five-octave compass, disposed 2 × 8′, 1 × 4′, often with a cut-through lute stop on the upper manual. Dulcken preferred to use a dogleg jack for the normal upper 8′ rather than a coupler (fig.14). But since the lute register and the lower 8′ usually pluck the same choir, with the second unison strings sounding only when the dogleg 8′ is engaged, no dialogue of lower 8′ and lute stop is normally possible and the upper manual is limited to providing a softer sound contrasting with the tutti of the lower manual. Johannes Petrus Bull, another German who settled in Antwerp, was apprenticed to J.D. Dulcken there. Four of his instruments have survived, dated 1776 to 1789, all of five-octave compass and disposed 2 × 8′, 1 × 4′. Three are two-manual instruments. One of these, dated 1778, has most ingeniously wrought, very wide upper-manual dogleg jacks, with two tongues facing in opposite directions. These jacks can pluck either 8′ choir and thus a combination of 2 × 8′ is available on each manual, since the dogleg and the lute stop can be combined on the upper keyboard. But the lower 8′ jacks are fitted with *peau de buffle* plectra so that only the dogleg 8′ is available to give a normal quilled 8′ sound on the lower manual. Thus, as with Dulcken, no dialogue of a quilled lower 8′ and a lute stop is possible in the manner of the English double harpsichord. A later two-manual instrument by Bull (1789) lacks the double tongues in the dogleg upper-manual jacks; but it is so arranged that damper interference between the lower 8′ jacks and the dogleg upper 8′ prevents the use of the upper keyboard as an echo manual.

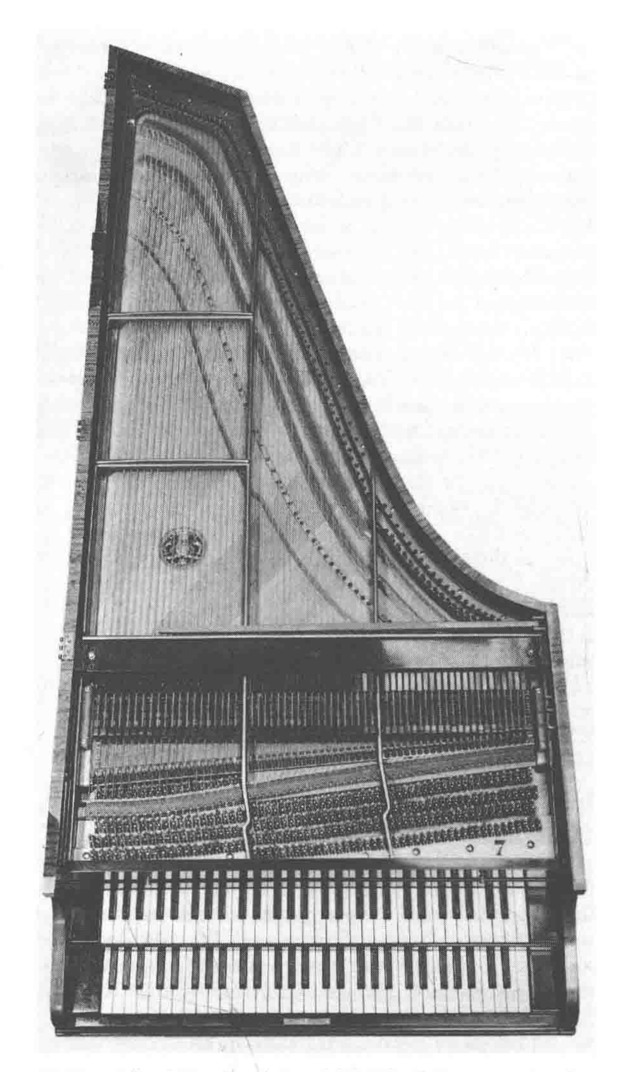
Although in Switzerland some sparse records survive of harpsichord making as far back as the late 15th century, the only surviving instruments identifiable as Swiss date from the 18th century and come from the German-speaking area. There is no firm evidence that the craft ever took root in the other regions. (A spinettino in the Schweizerisches Landesmuseum Zurich, known to have been decorated in Stupan, Engadin, in 1722, is of uncertain origin and probably 17th-century). Swiss harpsichords of the 18th century were probably similar in construction to the models produced in Strasbourg, particularly to those made in the Silbermann workshop. Peter Friedrich Brosi, a native of Swabia, was apprenticed to Silbermann before moving to Basle where he set up as an organ and harpsichord builder. A spinet signed by him (Schweizerisches Landesmuseum) is somewhat archaic for its date (1755), with a compass of *C–e‴*, a distinctly 17th-century type of dark walnut case and a black-stained stand of heavy turned legs connected by a stretcher. A spinet of 1755 signed by his son, Johann Jacob Brosi, is closer in dimensions, compass (*F′–f‴* and appearance to the late German type of instrument. An instrument by the Zurich craftsman Hans Conrad Schmuz, dated 1761, is in the Alstetten Museum. It is a single harpsichord of five-octave compass with two 8′ registers; the rather plain walnut case and simple turned legs suggest provincial origins. An *ottavino* by his elder brother, Leonhard Schmutz, was sold in Paris in 1924 on the dispersal of the Savoye Collection.

5. After 1800.

*(i) 19th century* The Kirkman firm is said to have made its last harpsichord in 1809; the latest extant example is dated 1800. 19th-century restorers such as Tomasini, Danti and Fleury in Paris produced a few new instruments, and the harpsichord still appeared sporadically as a continuo instrument in oratorio and opera, and even as a vehicle for virtuoso pianists like Moscheles (1837) and Pauer (1861–7) to play in 'historical recitals'. But generally the traditions of harpsichord playing and construction slumbered in the 19th century; scholars, performers and public alike assumed that if Bach and Handel had known the modern piano in its iron-framed, cross-strung, double-escapement perfection, they would surely have preferred it to the 'deficient' harpsichords of their time.

In the mid-1860s the French virtuoso pianist Louis Diémer began to include in his recitals selections performed on the harpsichord, generally using a 1769 instrument by Pascal Taskin which was owned by the maker's descendants (but now at the Russell Collection in Edinburgh; see fig.9 above). In 1882 this harpsichord was restored by Louis Tomasini and subsequently borrowed for study by the Erard firm of piano and harp makers in Paris, with a view to resuming production of such instruments. Shortly thereafter the rival firm Pleyel also examined the Taskin harpsichord, and at the Paris Exposition of 1889 both these firms and Tomasini displayed elaborately decorated harpsichords (which are now in the Musikinstrumenten-Museum, Berlin; see fig.15 below).

The early revival Erard and Pleyel harpsichords – two-manual, five-octave instruments, disposed 2 × 8′, 1 × 4′ – are actually constructed more along the lines of English instruments of the mid-and late 18th century, such as Kirkman's and Shudi's, than those of Taskin instruments. Their framing, open at the bottom like that of the modern grand piano, is much heavier than that of 18th-century harpsichords, Erard's rather more so than Pleyel's. (Pleyel had been influenced by the piano to a greater extent in other respects such as scaling, soundboard ribbing and buttoned-on bridges.) While no metal bracing was used, the strings and bridges were far heavier than in antique instruments. The jacks were wooden, with traditional dampers. Erard used quill plectra in the lower 8′; but the other registers were leathered, as were all of Pleyel's (including the extra English-type cut-through lute stop which Pleyel added to the Taskin disposition). After initially opting for stop levers going through the name-board, Erard changed to an instrument solely with pedals, such as Pleyel had made from the start. The keyboards are proportioned like those of the makers' pianos.



In London during the late 1880s Arnold Dolmetsch, a young French-born violin teacher who had trained at the Brussels Conservatory (where he had attended historical concerts with early instruments) and the Royal College of Music, London, began to present concerts of Renaissance and Baroque music. By 1890 he had acquired and made serviceable a Kirkman double harpsichord, an Italian virginal and a large German clavichord and a spinet. His concerts attracted a growing and influential circle of artists, writers and critics. In 1894 he constructed his first clavichord, and in 1896 at the suggestion of William Morris his first harpsichord, for display at the Arts and Crafts Exhibition in London (now the Dolmetsch collection, Horniman Museum, London). This was a one-manual instrument of *G′* to *f‴* compass, disposed 2 × 8′ with buff stop and four pedals, and it so impressed the conductor Hans Richter that he engaged Dolmetsch, with the instrument, to accompany the recitatives in the 1897 Covent Garden production of Mozart's *Don Giovanni*. It was also used in Purcell performances in Birmingham. While antique instruments had served on rare occasions during the 19th century for continuo playing, this was apparently the first such use of a modern harpsichord. The revival in Britain owed much also to the efforts of A.J. Hipkins, a concert pianist, associate of the Broadwood firm and historian of keyboard instruments. In the 1880s and 1890s Hipkins gave lecture-demonstrations on 18th-century English harpsichords, using both his personal Kirkman and Shudi-Broadwoods from his firm's collection, and later the new Pleyel and Erard revival instruments.

*(ii) 1900 to 1940.* In Germany and central Europe the harpsichord revival took hold more slowly. Almost from the first, moreover, a baleful influence made itself felt – the acceptance, as a model specimen, of a much-altered instrument that was allegedly associated with Bach (harpsichord no.316 in the Musikinstrumenten-Museum, Berlin) which had in fact been rebuilt sometime in the 18th century from a 16′ and a 4′ register on the lower manual and an 8′ with buff stop and shove coupler on the upper, to a disposition of 16′ and 8′ on the lower manual and 8′ with buff stop and 4′ on the upper (*see* Bach harpsichord). As early as 1899 a modern instrument based on no.316 was built by Wilhelm Hirl of Berlin for the Dutch collector D.F. Scheurleer, of The Hague. Other early German revival makers, such as Carl A. Pfeiffer (Stuttgart), Johannes Rehbock (Duisburg) and J.G. Steingraeber (Berlin), soon followed with their own versions of the spurious 'Bach' harpsichord. Even more elaborate and curious instruments were occasionally attempted in

central Europe at this time, such as a three-manual one by Seyffarth of Leipzig (1909; now in the Musikinstrumenten-Museum, Leipzig University). The director of the Berlin Collection, Oskar Fleischer, published an article in 1899–1900 summing up the aesthetics of the early harpsichord revival. He reported that the new Erard harpsichord had been seen and heard at the Vienna Music and Theatre Exposition of 1892 along with historical instruments from such collections as those of Moritz Steinert (New Haven). He found the sound of the Erard 'hard, brittle and unsatisfying, quite apart from the lack of tonal combinations', and went on to praise Hirl's copy, allegedly faithful (save for a few small improvements) to the 'Bach' harpsichord which Fleischer had had acquired by the collection. He stressed, as a principle, variety of timbres and ease of changing registrations. The perfected modern harpsichord, with its pedals with half-hitches or special hand stops for dynamic variation, variety of plectra material, historically rare registers (16′ and cut-through lute), in addition to the basic 2 × 8′, 1 × 4′ disposition of the classic instrument, embodies the fulfilment of this ideal. In extolling such features, Fleischer particularly emphasized 18th-century music and the works of Bach and his contemporaries. The practicality and desirability of the 'Bach' disposition (lower manual: 16′, 8′; upper manual: 8′, 4′; plus buff stop and coupler) were assumed without question. Fleischer also raised some of the practical questions that continue to plague those concerned with presenting early music in the concert hall: whether the harpsichord can or should be capable of the level of loudness required to fill large auditoriums and balance modern string and wind instruments; and the best specification for an all-purpose harpsichord. At the time, when the shift from piano back to harpsichord was getting under way, there was as yet no concept of specialized instruments being specially suited to performing particular music.

During the first half of the 20th century many harpsichord players praised the instruments made according to the plans of J.G. Steingraeber (1858–1932), the son of the Bayreuth piano manufacturer Eduard Steingraeber, and a keen collector of historical instruments. When he moved to Berlin in 1906 he opened a workshop in which eight harpsichords were built according to his instructions, to seven different models. Steingraeber's instruments were all modelled after the 'Bach' harpsichord in scaling and disposition, and did not have pedals (unlike most other makes of their time).

The Erard firm built harpsichords for only a limited period, but Pleyel continued their production. In 1912, at the urging of Wanda Landowska, the first modern harpsichord virtuoso of international renown, a new Pleyel model was introduced at the Breslau Bach Festival, and it was on this type of instrument that she performed, recorded and taught until her death in 1959. In 1922 Pleyel (fig.15) added an iron frame holding thick strings at high tension. The barring was almost identical to that of the modern grand piano, and the finely veneered case correspondingly heavily constructed. The touch depth and the dimensions of the five-octave keyboard were those of the modern piano. The cheekpiece and the spine were cut away in a delicately curved line to reveal the harpsichordist's hands playing on the keyboards. An extra set of overhead dampers was provided for the 16′ strings, and a highly sophisticated fine-tuning system was

*15. Harpsichord ('Landowska' model) by Pleyel, Paris, introduced 1912*

also fitted. The registers were controlled by seven pedals (but without half-hitches), disposed as follows – lower manual: 16′, 8′, 4′; upper manual: 8′, lute (*Nasat*) and buff; and coupler. The pedal action was largely negative (i.e. a pedal was raised to engage the register), a system that may have derived from the English 18th-century machine-stop pedal.

The arrival of this new Pleyel, first demonstrated in Germany, had a marked effect on harpsichord making in that country. Some makers now favoured the Pleyel disposition over that of the 'Bach' model, and the iron frame and generally heavier construction were taken up by such firms as Maendler-Schramm, a Munich workshop set up in 1906, and Neupert of Bamberg, a piano manufacturer (established 1868) that began harpsichord making at the same time. The preference for the Pleyel disposition owed much to Landowska's influence as professor of harpsichord at the Berlin Hochschule für Musik, where she taught from 1913 to 1919, training an entire generation of harpsichordists. (In Germany, as elsewhere, very few harpsichords were made during World War I.)

From about 1930 most German harpsichord makers reverted to the 'Bach' disposition, and abandoned metal framing. Organist-harpsichordists, especially, had complained that an upper manual with only a single 8′ stop could not balance the mass of registers on the lower manual of the Pleyel-type instrument. Compromises of considerable mechanical ingenuity were offered by German makers, and later by some English builders as well: a 4′ stop normally played on the lower manual which could be coupled up to the second keyboard; 4′ strings playable by two sets of jacks, one for each manual; and two sets of 4′ strings, one for each keyboard.

From 1902, while the German revival was beginning, Arnold Dolmetsch had toured the USA extensively, presenting concerts of early music. In 1905 he was invited by the Chickering firm of piano makers in Boston to establish a department for the production of harpsichords, clavichords, lutes and viols. He accepted, and headed this department until 1910, when the firm's financial difficulties forced them to discontinue it. 75 keyboard instruments, including 13 harpsichords, were produced. These were two-manual instruments freely derived from a French 18th-century harpsichord used in Dolmetsch's concerts (the so-called 'Couchet-Taskin', possibly by Jean Goermans, dated 1764 and rebuilt in 1783–4 by Taskin; now in Edinburgh). The keyboards were back-pinned in the Taskin manner. While heavily cased, the Dolmetsch-Chickering harpsichords were lighter in construction than most other contemporaneous examples. The scaling was longer than that of 18th-century French harpsichords and the ribbing of the soundboard, while light, was distinctly modern, crossing under the bridge. The tone, somewhat lacking in brightness, was nonetheless closer to the sound of antique instruments than any modern harpsichord had been. The lower 8′ was leathered and was provided with two sets of jacks, rather than half-hitches, to offer two dynamic levels. The upper 8′ was quilled, which rendered a combination with the lower 8′ less homogeneous, as in the case of the Erard model of 1889. The 4′ and the 16′, the latter added in 1908 to two of the last of this series of harpsichords, were leathered, and the 16′ (which used overspun strings) was stacked on top of the 8′ bridge. The instrument case was not extended to accommodate the deep register; in fact, it was made (like that of earlier Dolmetsch instruments) shorter than the Taskin prototype, with an incongruously Germanic or piano-like double-curved bentside, and, for good measure, with a heavy timber under the soundboard which actually rendered its last 23 cm ineffectual.

From Boston, Dolmetsch moved to Paris, where he continued his work at the piano manufacturers Gaveau, who had not previously made early keyboard instruments. The four or five harpsichords produced were essentially similar to the Chickering instruments. The heavy timber

*16. Harpsichord ('Bach' model) by J.C. Neupert, Bamberg, introduced 1931*

member under the soundboard was abandoned, but the case was shortened still further. The 16′ register was now a standard feature of the larger Dolmetsch harpsichords. In the spring of 1914, Dolmetsch returned to England, and by 1918 he had established his workshop in Haslemere, Surrey, where his successors have maintained their workshop. Gaveau continued to build harpsichords and related instruments (from Dolmetsch's plans) until the 1940s.

The Pleyel firm introduced a smaller version of its 'Landowska' model concert harpsichord in 1927, still iron-framed but without a 16′ stop and descending only to *A′* instead of *F′*; the pedal action was negative as in the large model. In 1925 Dolmetsch implemented a new conception in harpsichord actions, a mechanism intended to avoid the accessory noises and jangle that can mark the passage of the plectrum past the string on the jack's return to its original position. Regulation of the new action, however, was difficult to attain and maintain; and though the action did afford the possibility of fitting a damper pedal, this was insufficient to redeem it and it was eventually discarded. A device fitted to the upper manual allowing for a kind of clavichord-like *Bebung* was a feature of Dolmetsch harpsichords for some years afterwards. A compound metal frame of wrought iron and steel welded together was introduced by Dolmetsch in 1930 but given up a few years later as it did not bring about the desired increase in stability of tuning. Modernization of the instrument was attempted by other makers as well. Karl Maendler in Munich, for instance, worked for years to develop a harpsichord with an action that would admit touch dynamics. The resultant instrument, dubbed the 'Bachklavier', was introduced with some success by the German harpsichordist Julia Menz, but it failed to survive. Maendler's addition of a damper pedal which raised the dampers of the lower-manual jacks only, was longer-lived. About 1933, again in response to the wishes of organists, Ammer Brothers (Eisenberg) began producing pedal keyboards with independent sets of strings and jacks which could be placed under a conventional harpsichord. Other builders, such as Neupert (fig.16) and Maendler-Schramm in Germany, and Alec Hodsdon in England, began a similar production shortly after.

Despite unfavourable economic conditions, professional harpsichord building in the USA, which had been suspended since the departure of Dolmetsch for Paris in 1910, was resumed in 1931 when John Challis (1907–74) returned to his homeland after four years at Haslemere as the first Dolmetsch Foundation scholar-craftsman. In the earliest Challis harpsichords framing was wholly of wood and no adjusting screws were added to the traditional wooden jacks. But subsequent instruments reflected Challis's ingenuity in adapting the latest synthetic materials and technological advances. In his last years he achieved his aim of creating a harpsichord that would be at least as stable in the rigorous North American climate as were indigenous pianos. His late instruments were constructed wholly of metal, including the soundboard, with wood veneers used only as a decorative covering on keyboards and casework. While the tonal quality of Challis instruments – very little influenced by the sound of the early harpsichord – was not to everyone's taste, his craftsmanship was universally admired. Two pedal harpsichords built for organist clients represent the summit of his achievement. The disposition of the more elaborate of the pair set a record for sheer complexity – Pedals: 16′, 8′, 4′, 2′; lower manual: 16′, 8′, 4′; upper manual: 8′, 4′; plus the usual buff stops and manual coupler.

In 1935 Thomas Goff, a London barrister, set up a workshop to build instruments to the designs of Herbert Lambert, which were influenced by both the later Dolmetsch and the modern German harpsichords. Only 14 Goff harpsichords were produced, disposed like the large Pleyel model, with metal frame and heavy case, as well as heavy stringing and plectra (on later instruments both of leather and quill). They were widely used as concert instruments in the years immediately after World War II. Robert Goble, after 12 years in the Dolmetsch workshop, set up on his own in 1937, but undertook large two-manual instruments only a decade later. These sturdy wood-framed harpsichords in the modern tradition offered the resources of the Pleyel disposition but with greater volume of sound and stability of tuning and regulation.

*(iii) Since 1940.* Harpsichord making suffered extensively from the havoc wrought by World War II. Talented younger builders died, including Rudolph Dolmetsch, the elder son of Arnold. Maendler's workshop and others were destroyed by bombing and never regained the momentum of their pre-war years. After 1945 such surviving shops as Neupert and Pleyel resumed production much as it had been in 1939. Many renowned modern makers began learning their craft as apprentices during the postwar years: Konrad Sassmann, Kurt Wittmayer and John Feldberg at the Neupert workshop, Frank Hubbard (1920–76) at the Dolmetsch shop, and William

*17. Harpsichord designed by William Dowd, with lid painting by Marc Chagall, 1980 (Musée National Marc Chagall, Nice)*

*18. Complete harpsichord kit by Frank Hubbard, Boston; a replica of the harpsichord by Pascal Taskin, 1769, shown in fig.9*

Dowd (*b* 1922) and Frank Rutkowski at Challis's. Hubbard also worked briefly in London with Hugh Gough (1916–97), who was also influcenced by Dolmetsch and who had built early keyboard instruments from 1946. Gough made relatively few harpsichords, but these were remarkable at the time for their closer resemblance to historical instruments than any modern ones since the Dolmetsch-Chickering models. After moving to the USA in 1959, however, Gough devoted himself exclusively to other types of instrument.

In 1949 Hubbard and Dowd established their joint workshop in Boston, Massachusetts, the first in modern

times dedicated to the construction of harpsichords according to historical principles, but not adhering slavishly to them in every detail, e.g. in the introduction in the late 50s of the newly invented synthetic material Delrin as a substitute for quill. Their collaboration continued until 1958, and in the words of Ralph Kirkpatrick, 'accomplished the major revolution of this century in harpsichord building ... a return to seventeenth- and eighteenth-century traditions and principles of construction that had hitherto been practiced only in isolated instances'. From this point on, players were faced with a fundamental choice between the modern harpsichord as it had evolved since the beginning of the revival, and reconstructions of historical instruments.

Among the first German harpsichord makers who realized the importance of timbral characteristics for national schools of harpsichord making was Rainer Schütze (1925–89). While studying architecture, he worked in the harpsichord workshop of Walter Merzdorf. In 1954 he founded his own workshop in Heidelberg, producing a model after Ruckers and thus departing from the 'Bach' disposition. Schütze's ideal was the combination of historical sound qualities with modern design. He was one of the first modern harpsichord builders who consequently dispensed with the 16′ stop.

Working independently, Martin Skowroneck (*b* 1928) of Bremen completed his first harpsichord (now in the Musikinstrumentten-Musuem, Berlin) in 1953, combining in it features of the 'Bach' harpsichord and a harpsichord of 1740 by Gottfried Silbermann (no.5, Musikinstrumenten-Museum, Berlin). But in Germany it was specially difficult for the traditional type of instrument to gain a foothold. In no other country had the modern type of harpsichord become so firmly established. Every concert hall and radio station had acquired or had ready access to a modern instrument, invariably a large two-manual harpsichord with the 'Bach' disposition. Conservatory teaching was based on this standard concert model. Performers and public alike had grown used to it, and even its appearance – because this instrument was exported round the world to an extent unparalleled by harpsichords of any other country – was a part of musical life. Though Skowroneck's work was followed in a few years by that of other historically orientated makers, such as Klaus Ahrend, the modern instrument continued to dominate the concert stage in Germany into the 1970s. In the USA, on the other hand, the use of traditional harpsichords became widespread, the modern instrument being used almost exclusively for 20th-century music, at least by the younger generation of performers.

With the shift away from the modern harpsichord to the historical instrument, performing style has also been greatly reformed, with far less emphasis being placed on registration changes than formerly. Earlier types of harpsichord, such as models after Ruckers and the older Italian school, are coming into wider use for specialized purposes, although the large 18th-century double harpsichord has tended to assume the central role formerly occupied by the modern concert instrument. The influence of builders active in the restoration of antique harpsichords (*see* INSTRUMENTS, CONSERVATION, RESTORATION, COPYING OF) has contributed to a greater awareness of the special qualities of the best historical instruments. The new generation of harpsichord makers, without significant exception, are concentrating on the historical instrument. A certain share of the credit for the growing interest in harpsichord making and playing in recent years is due to the introduction of instruments in kit form. This was pioneered by W.J. Zuckermann (*b* 1922) in 1960 with a simplified, modern type of instrument, and shortly thereafter reproductions of historical instruments in kit form were introduced by Frank Hubbard (fig.18). The higher-quality kits could offer excellent harpsichords of quite authentic construction and materials. Contemporary composers, who until the 1970s generally favoured the modern instrument (and most often prescribed specific registration changes possible only with pedals), now accept the limitations of the classic instrument in this respect. Since the 1980s almost all performers of early music have opted for the harpsichord in its traditional form.

By the end of the 20th century there were about 250 professional harpsichord builders worldwide, with high concentrations in Western Europe and the USA. Most of these work on their own or with a workforce of three or less. Many copies of 16th-, 17th- and 18th-century models are being produced, after Ruckers, Blanchet, Taskin, Mietke, Hass, Giusti and many other reknowned makers.

Electronic harpsichords have also been introduced by several firms. They offer complete stability of tuning and a choice of several historical temperaments as well as equal-tempered tuning.

**Harpsichord-piano.** A keyboard instrument capable of sounding both as a harpsichord and a piano, either through the use of imitating stops or by means of a dual action. Documents show that during the 18th century a substantial number of keyboard instruments which combined the actions of organs, regals, glass harmonicas, *Geigenwerken*, harpsichords and others were built, reflecting not only the mechanical ingenuity of their makers but also a delight in the rich variety of available musical timbres and a satisfaction in placing them at the command of a single player. In 1783 J.P. Milchmeyer, piano builder and pedagogue, tabulated more than 250 combinations in one of his instruments. In technical and timbral terms, the difference between the harpsichord and the piano was less distinct than it is today. The harpsichord and the 'harpsichord with hammers' coexisted peacefully alongside each other and were also combined in single

instruments: Bartolomeo Cristofori, Pascal Taskin and J.A. Stein all built instruments of each type.

Three types of harpsichord-piano may be identified. The first category comprises pianos with a stop imitating the sound of the harpsichord and harpsichords with a stop imitating the sound of the piano. In 1775 J.G. Wagner advertised his *Clavecin Roïal*, a square piano with bare wooden hammers, which enabled the instrument to imitate the harpsichord, and a pedal used to make a crescendo by gradually raising a hinged swell cover. In none of the surviving examples can the harpsichord and piano sounds be used simultaneously although registration changes can be made whilst playing, using pedals or knee levers. A contemporary source relates that Taskin's *peau de buffle* stop (1768), which uses leather plectra instead of the usual quill, rendered the harpsichord capable of being played expressively, with *forte* and *piano*, and was thus regarded as a 'piano' stop. Harpsichords with this stop have a knee pommel which gradually retracts the quill plectra of the 8′, 8′ and 4′ and advances the *peau de buffle* providing a decrescendo (and in reverse a crescendo) like that of the English machine stop. A single-manual harpsichord made in Dublin in about 1769 by Ferdinand Weber has a knee lever which retracts the 4′ quilled, the 8′ quilled and the 8′ leathered stops in turn, advances the 8′ lute stop and finally retracts the latter, all by degrees.

Harpsichord-pianos of the second type have both a harpsichord action with plectra and a piano action with rebounding hammers but possess a single soundboard and at least some sets of strings in common to both actions. A letter of 1598 by Hippolito Cricca might be interpreted as referring to such a combination (*see* DULCE MELOS). In 1716 Jean Marius presented plans for a *clavecin à maillets* which combined the two actions. In 1770 F.J. Späth announced a three-manual instrument combining his *Tangierung* (presumably his TANGENT PIANO action: a rebounding hammer action) with a harpsichord action. Stein's single-manual *Saitenharmonica* (1783) combined his normal piano action with an extra set of strings plucked by a harpsichord action which used 'a very elastic material' (probably *peau de buffle*), enabling a dramatic diminuendo. Other makers who are known to have combined the two types of action in a single instrument include Friedrich Ficker(t) (1742), C.E. Friderici (1772), Andries Weltman (1757–9), Robert Stodart (1777), John Geib (1792) and James Davis (1792). Whether the two actions could be used simultaneously or together on one keyboard is not always clear from surviving documents.

The earliest surviving harpsichord-piano, by Giovanni Ferrini, Cristofori's pupil, dates from 1746. It has two sets of 8′ strings played with a piano action from the upper keyboard or with a harpsichord action from the lower keyboard. The two actions cannot be combined on one keyboard but can be used simultaneously. J.J. Merlin patented (1774) a down-striking hammer action that could be added to any English harpsichord. An example survives in the Museum of Fine Arts, Boston, in a harpsichord by Jacob Kirkman. Merlin also made harpsichord-pianos. In one (1780), now in the Deutsches Museum, Munich, the harpsichord action serves the 16′ (leather plectra), 8′ and 4′ registers, while the piano action can be used for the 16′, 8′ and an extra 8′. These can be combined on the single keyboard using pedals whilst playing. There are stops imitating the harp and the lute, and a crescendo pedal. Other surviving instruments combining the two actions include one attributed to Johann Ludwig Hellen (1779; Musikinstrumenten Museum, Berlin) and one signed Robert Stodart (1792; Smithsonian Institution, Washington).

Instruments of the third category have a harpsichord and a piano action, each replete with its own action, strings and soundboard. Stein's *Poly-Toni-Clavichordium*, reported in 1769, had two upper keyboards operating the harpsichord (16′, 8′, 8′ and 8′) and a third, lower keyboard operating the double-strung piano. The soundboard and strings of the piano were underneath the baseboard; those of the harpsichord were above. The two instruments shared a common baseboard. The harpsichord lid opened normally while the lid of the piano opened downwards towards the floor. The two instruments could be coupled on the lowest keyboard. The report especially praises the combination of the soft 16′ register of the harpsichord and the piano for solos, taking the accompaniment on another keyboard.

Three harpsichord-pianos of the third category survive. One, by Joachim Swanen (1786), is a two-manual harpsichord (16′, 8′, 8′ and 4′) with a two octave pedalboard for a piano action serving a separate set of strings that run under the instrument and use the baseboard as a soundboard. The others are both 'vis-à-vis' instruments by Stein with a piano at one end and a harpsichord at the other, sharing a common bentside. Trackers underneath enable a single musician to play both instruments from the harpsichord end. There are knee-levers for the piano dampers at both ends.

The 1777 example has one keyboard for the piano. The wooden hammers have no covering but there is a moderator stop (*see* MODERATOR). At the other end there are three keyboards, the lowest operating the piano and the other two the harpsichord, which has the same disposition as the *Poly-Toni-Clavichordium*. The harpsichord registers are selected using hand stops. They can be combined on the lowest keyboard with the piano.

The piano action of the 1783 *vis-à-vis* has round, hollow hammer heads of wood surmounted by leather pads. At the harpsichord end the lower keyboard operates the piano and the upper keyboard the harpsichord (8′ quilled, 8′ *peau de buffle* and 4′ quilled). The harpsichordist has three knee-levers, one lifting the piano dampers, one retracting the two quilled harpsichord stops to leave the leathered stop (reminiscent of Taskin) and another to combine the harpsichord with the piano on the upper keyboard. Unlike the 1777 instrument, registration changes can be made while playing.

**Harp stop.** *See* BUFF STOP. *See also under* ORGAN STOP (*Harfa*).

**Harp Ventura.** A type of harp-lute patented by ANGELO BENEDETTO VENTURA.

**Harp way.** A tuning name which, together with others such as 'viol way', 'lute way', 'plain way', 'Allfonso way', 'lyra way' and 'high harp way', is found in 17th-century tablatures for the LYRA VIOL. These terms refer to certain lyra viol tunings, which, because of their wide use, were recognizable by name alone without the need for specific tuning instructions. This was true, however, for only a few of the nearly 60 tunings whose use has been documented.

'Harp way' includes a triad among the six open-string viol pitches. This tuning appears in two forms, one calling for a major triad ('harp way sharp', that is, *D–G–d–g–b–d′*), and one for a minor triad ('harp way flat', that is, *D–G–d–g–b♭–d′*). 'High harp way' also appears in the major ('high harp way sharp', that is, *D–A–d–f♯–a–d′*) and minor ('high harp way flat, that is, *D–A–d–f–a–d′*) forms. The French lute tablature in which lyra viol music was commonly written does not itself indicate pitch. There is some evidence, however, which links the pitch names given here with these four tunings (for illustration of how this tablature was used, *see* TABLATURE, ex.17). The term *sette* was sometimes used as a synonym for way as in *harp sette sharpe*, *French sette* and *sette of eights*.

FRANK TRAFICANTE

**Harp zither** [guitar zither] (Ger. *Gitarren-Zither*, *Harfen-Zither*). (1) A type of zither without a fingerboard, manufactured from the late 19th century onwards and found mostly in Germany, Switzerland, Austria and the USA. Variants include the 'mandolin guitar zither' or 'mandolin harp zither', which has double stringing. A typical instrument has melody strings tuned chromatically or partly chromatically, usually *c′–c‴*, played with a plectrum on the right thumb, and 24 or more accompanying strings tuned in five or six chords, usually major, plucked with the fingers of the left hand (see illustration). Some models have no melody strings and are used purely for accompaniment. A related instrument, with a similar sound and function, is the AUTOHARP.

(2) A variant of the modern fretted zither that has a pillar between the wrest plank and the body. *See* ZITHER, §2.

For bibliography *see* ZITHER.

ANDREAS MICHEL

*'Harp zither', with 25 melody strings and six chords of four strings each, by Menzenhauer & Schmidt, Berlin, c1910 (Musikinstrumenten-Museum, University of Leipzig)*

**Harrán, Don** [Hersh, Donald Lee] (*b* Cambridge, MA, 22 April 1936). Israeli musicologist of American birth. At Yale University he studied French literature (1953–7); he then studied musicology at the University of California, Berkeley (1957–62, MA 1959), where he took the doctorate under Kerman in 1963 with a dissertation on Verdelot and the early madrigal. In 1963 he settled in Israel, where he lectured at the Rubin Academy of Music, Jerusalem (1963–6), before being appointed to the musicology department of the Hebrew University (1966); he has also been a regular guest lecturer at the Bar-Ilan University (from 1970) and worked as corresponding reporter in Israel for *Current Musicology* of Columbia University (from 1968). He has received research grants from the Edmond de Rothschild Foundation for work on mannerism in Renaissance music (1964), from the Hebrew University for work on *madrigali cromatici* and other topics (1970–75, 1977–8), from the American Philosophical Society (1975), from the American Council of Learned Societies (fellow, 1974–5) and from the Gladys Krieble Delmes Foundation, New York, for work in Venice. He became professor of the musicology department (1980) at the Hebrew University and also chairman (1977–80, 1991–2, 1994–). He has been a leading figure in the Israel Musicological Society, acting as chariman (1978–80), vice-president (1992–7) and was on the Board of Directors (1987–92). In 1996 he became acting director of the Jewish Music Research Center at the Hebrew University. His main research has been on Renaissance music (his major work being the five-volume anthology of black-note madrigals), early music theory, music and its relation

to literature, humanism and mannerism, performing practices in early music and early Jewish music. In 1999 he was awarded the Michael Landau Prize for Scholarly Achievement in the Arts.

WILLIAM Y. ELIAS/R

**Harrell, Lynn (Morris)** (*b* New York, 30 Jan 1944). American cellist, son of MACK HARRELL. He studied with Leonard Rose at the Juilliard School and with Orlando Cole at the Curtis Institute, making his début with the New York PO at Carnegie Hall in 1961. He then attended masterclasses given by Piatigorsky and Casals. At the age of 18 he became a member of the Cleveland Orchestra, and from 1964 to 1971 was principal cellist there, the youngest player and the only member of the orchestra to perform as a soloist under Szell in New York. He then toured extensively in North America and taught at the Cincinnati College-Conservatory until 1976, when he joined the faculty of the Juilliard School. He made his New York recital début in 1971, and his European début in 1974. Thereafter he appeared as a soloist with the world's leading orchestras, as a recitalist, and as a chamber music player. He was co-winner of the first Avery Fisher Prize in 1975 and has participated in the Ford Foundation Concert Artists programme, which enabled him to commission and perform Donald Erb's Cello Concerto. From 1987 to 1993 he was Gregor Piatigorsky Professor of Cello at the University of Southern California, and from 1988 to 1991 was artistic director of the Los Angeles Philharmonic Institute. In 1986 he was appointed to the International Chair of Cello Studies at the RAM in London, where he served as principal from 1993 to 1995.

Harrell's playing is remarkable for its pure intonation, warmth of expression, and awareness of the soloist's relationship to the accompaniment. His refusal to indulge in purely rhetorical phrasing reflects an acute sense of ensemble and structure. In 1981 he shared a Grammy Award with Perlman and Ashkenazy for their recording of the Tchaikovsky Trio. Harrell has also made acclaimed recordings of the Beethoven trios (with Ashkenazy and Perlman), as well as the concertos of Dvořák and Elgar. He plays a 1673 Stradivari, previously owned by Jacqueline du Pré, and a 1721 Montagnana.

RICHARD BERNAS/DENNIS K. McINTIRE

**Harrell, Mack** (*b* Celeste, TX, 8 Oct 1909; *d* Dallas, 29 Jan 1960). American baritone, father of LYNN HARRELL. He studied at the Juilliard School and in 1939 won the Metropolitan Opera Auditions of the Air and made his début with the company as Biterolf in *Tannhäuser*. He created Samson in Bernard Rogers's *The Warrior* (1947) and continued to appear at the Metropolitan until 1958, singing a wide repertory that included Masetto, Papageno, Kothner, Amfortas, John the Baptist, Captain Balstrode (*Peter Grimes*) and Nick Shadow, his best-known role, which he sang in the American première of *The Rake's Progress* in 1953. He appeared with New York City Opera, making his début in 1944 as Germont, and in Chicago and San Francisco. His repertory also included Escamillo, Marcello, Valentin, Luna, Golaud and Wozzeck, which he recorded, and he took part in the US premières of Milhaud's *Christophe Colomb* (1952, Carnegie Hall) and his *David* (1956, Hollywood Bowl). He taught at the Juilliard School from 1945 to 1956. Harrell possessed a sturdy lyric baritone of remarkable beauty and was a considerable musician and artist, but perhaps the most notable aspect of his singing was the directness of its human appeal.

RICHARD DYER, ELIZABETH FORBES

**Harrer, (Johann) Gottlob** (*b* Görlitz, 8 May 1703; *d* Carlsbad, 9 July 1755). German composer. After studying law at the University of Leipzig from 15 May 1722 to at least 21 April 1725, he travelled to Italy at the expense of Count Heinrich von Brühl to study music. From 1731 to 1750 he served in the count's private musical establishment in Dresden. On 8 August 1750, 11 days after the death of J.S. Bach, the town council ('three councils') of Leipzig chose Harrer as his successor, rejecting C.P.E. Bach, A.F. Graun, J.L. Krebs, J.G. Görner and Trier. As the proceedings of the town council make clear, they were influenced less by Harrer's musical talents than by his willingness to teach and his nearly peremptory recommendation from Count Brühl, then the effective ruler of Saxony. According to Mennicke, Harrer was appointed chamber composer to the royal electoral court of Saxony in April 1755.

Harrer contributed at least one composition (the oratorio *Gioas, Rè di Giuda*) to the weekly Grosse Konzert, in Holy Week, 1753. While he spent some time on musical speculation (especially in his *Specimen contrapuncti duplicis*), and copied, arranged and performed many pieces in *stile antico* (Palestrina, Fux), most of his own music was of a progressive, italianate cast, with only occasional sections in fugal or *a cappella* style. He was probably influenced by J.A. Hasse in Dresden, and may even have studied with him in Italy. None of Harrer's music was printed during his lifetime – and almost none since – although many of his compositions were offered in the Breitkopf catalogues of 1761–9.

WORKS

VOCAL

*for SATB with obbligato orchestra unless otherwise stated*

Latin sacred music, mostly 1731–50: Missa a capella (F), with colla parte orch, *D-Bsb*; Mass (D), 1735, *Bsb*, *Dl*; Mag (G), double chorus, orch, *Bsb**; Miserere (c), *Dl*; 2 Domine ad adjuvandum (Ps lxx) (A) [with colla parte orch], (a), *Bsb*; Dixit Dominus (Ps cx) (F), *Bsb*; Beatus vir (Ps cxii) (B♭), *Bsb*; 2 Ky fugues, SSATB, colla parte orch, *HER*; Ky (c/C), Sanctus (F): both *Bsb*

Orats and Passions: Gioas, Rè di Giuda, Leipzig, Grosse Konzert, 3 Swans on the Brühl, Holy Week 1753, *Dl*; La morte d'Abel (P. Metastasio, Ger. trans. Harrer), Leipzig, Nikolaikirche, Good Friday 1753, *LEm*; Ich weiss nicht, wo ich bin (Passion orat, trans. from Metastasio), *PL-GD*; Isacco, figura del Redentore (Metastasio) [Ger. trans. as Genug, mein Sohn, genug, der grösste Theil der Nacht], listed in Breitkopf catalogue, 1764, lost; Ich will zum Myrrhen Berge gehn (oratorium nach dem Evangelio S Johannis), listed in Breitkopf catalogue, 1764, lost

German sacred music, ?1750–55, unless otherwise stated: Der Reiche starb und ward begraben (cant.), Leipzig, 3 Swans on the Brühl, 8 June 1749, lost; 1 yearly cycle of 48 cants., lost; Mein Herz ist bereit, motet, in J.A. Hiller: *Vierstimmige Motetten und Arien in Partitur*, ii (Leipzig, 1777), ed. P.M. Young (New York, 1976); Gott ist mein Hort (C.F. Gellert), fugue, SSATB, colla parte orch, *D-HER*

Bellintes lebte noch in bester Jahresblüte (secular cant.), S, orch, listed in Breitkopf catalogue, 1764, lost

INSTRUMENTAL

27 syms. listed in Breitkopf catalogues, incl. 19 extant in 1 MS [part autograph], *LEm*, 1 in *Dl*, 7 lost; Sym. (D), 2 ob, 2 hn, bn, 2 vn, va, b, *Dl*; Sym. (D), 2 hn, 2 vn, va, b, *S-Uu*

38 partitas, various combinations of insts, listed in Breitkopf catalogues, all lost; 1 in *S-Uu*, not listed in Breitkopf catalogues

3 sonatas, hpd, *D-Dl*

51 duets, 2 rec; 2 hpd conc.; 1 fl conc.; 2 vn conc.; Catafalco in musica, 2 hn, verrilon, cl, 3 ob, bn, 2 vn, va, b; 2 sonatas, ob, vn, b; 1 sonata, 2 ob, bn; 2 sonatas, va d'amore, vn, b; 2 sonatas, va d'amore, b; Qt, carillon, 2 vn, b; Qt, fl, 2 vn, b: all listed in Breitkopf catalogues, all lost

THEORETICAL WORKS

*Specimen contrapuncti duplicis in octava etiam in decimam convertibilis et manentibus semper eisdem figuris a duobus, tribus et quatuor vocibus elaboratum a Gottlob Harrero* (MS, *D-Bsb*)

NORMAN RUBIN

**Harries, David** (*b* Portsmouth, 24 March 1933). Welsh composer. Although he was born in England, his parents were Welsh, and he has lived in Wales for most of his life. He was educated at Pembrokeshire Grammar School before entering University College, Aberystwyth, on a Robert Bryan music scholarship (BMus 1954). After teaching at Ounsdale School, Staffordshire, and at Milford Haven Grammar School, he was appointed lecturer then senior lecturer at his college in Aberystwyth. He joined the staff at the Welsh College of Music and Drama in 1975. His early interest in composition received encouragement in 1952 on winning a prize at the National Eisteddfod with his Introduction and Allegro Scherzoso for string quintet.

Harries's early works, for example the *Missa brevis* (1954), are largely traditional and tonally rooted; works such as the *Noctuary no.1* (1961) and *Petitions and Interludes* (1962) display a highly sophisticated sense of musical taste. During the 1960s Harries worked in a more freely chromatic idiom, incorporating elements of serial

technique. Tonal centres are never far from the surface of such works as the Violin Concerto (1964), in which he combines directness of utterance with a Bergian intensity (particularly in the slow movement) and highly idiomatic writing for the solo instrument. Both the Piano Quintet (1964) and the String Quartet no.2 (1968) combine a conciseness of idiom with a neo-classical outlook which Harries was to cultivate further in the 1970s and 80s. His settings of poetry by Welsh writers in English are particularly impressive. *The Sleeping Lord* (1983), in which he sets fragments of the poem by David Jones with an acute awareness of poetic meaning and musical declamation, remains one of the finest works of its kind produced by a Welsh composer in the second half of the 20th century. Although he has worked impressively in large-scale structures, this poetic vein sees him at his best. Though often eclipsed by his contemporaries Hoddinott and Mathias, his quietly distinctive and concise musical idiom has seen him gradually emerge as one of the most talented composers of his generation in Wales.

WORKS

Dramatic: The Bremen Town Musicians (entertainment for children), op.28, 1967; Peter and Elizabeth (op, prol., 2 acts), op.50, 1978–80; Music for the Miracle Plays in Cardiff, 1983

MALCOLM BOYD/LYN DAVIES

**Harrington, Henry.** *See* HARINGTON, HENRY.

**Harris.** English family of organ builders.

(1) **Thomas Harris** [Harriss, Harrisson] (*d* ?London, *c*1684). He was apprenticed to the elder Thomas DALLAM, and left with Dallam's family for Brittany in 1642. He married Katherine Dallam (daughter of Robert) by whom he had six children, including Renatus. He built three organs while in Brittany, at Roscoff (1649–50), Brélevenez (1654–6) and Morlaix, Notre Dame du Mûr (1656–61), and may have helped his father-in-law on others. He returned to England with his family about 1660, after the Restoration. An agreement he made in 1666 with the Dean and Chapter of Worcester described him as living in New Sarum, where he was engaged on the restoration and installation of the pre-Commonwealth organ in the cathedral. By then he had shortened his name from Harrisson to Harriss. This work was followed in the same year by a new organ for Gloucester Cathedral (embodying the old Chair organ, probably made by Robert Dallam in 1641) and by a new organ for Chichester Cathedral (1677–8). He built instruments for All Hallows, Barking-by-the-Tower, London (1675–7), St Sepulchre without Newgate, London (1676), and Winchester College (1664), and the organ at St Nicholas (now the cathedral), Newcastle (1676), is attributed to him. He was possibly assisted by his son Renatus in the later works. Little survives of his pipework except at Gloucester and Chichester, though the cases remain at Gloucester, St Sepulchre and Newcastle. His reputation is overshadowed by that of his more famous son (2) Renatus Harris who described him in his letter of 30 August 1683 to the Dean and Chapter of Durham as his 'poore aged father'; by then Renatus seems to have taken over the business.

(2) **Renatus** [René] **Harris** (*b* ?Quimper, *c*1652; *d* Bristol or London, 1724). Son of (1) Thomas Harris. His approximate date of birth derives from a lawsuit of 1703 in which he was said to be about 51 years old. He went to England with his father after the Restoration and gradually took over the business in the years preceding his father's death. In 1677 he married Joan Hiett, by whom he had a son, (3) John Harris, and a daughter who married the organ builder John BYFIELD (i). He was a Roman Catholic and enjoyed the support of Catherine of Braganza; he built an organ for the Popish Chapel at Whitehall Palace in 1686–8. G.B. Draghi, the queen's organist, demonstrated the instrument Harris built for the Temple Church in the conflict with 'FATHER' SMITH which started in 1683. Towards the end of his life he moved to Bristol.

Renatus Harris was the most flamboyant English organ builder of his time – not above sharp practice to gain

advantage over his hated rival, Smith, in the famous 'battle of the organs' contest in the Temple Church (he is alleged to have sabotaged Smith's bellows, but lost the contract), or to procure more work for himself. He fell foul of several city vestries and in particular of the Governors of Christ's Hospital, Horsham, who must have considered themselves well rid of him in 1711 (he put their organ out of order as money was owed to him, and was even alleged to have stolen 23 pipes). He had a flair for publicity, and never shrank from the opportunity to recommend himself for work, as for example to the Dean and Chapter at Durham in 1683. In 1698 he advertised himself in the *Post Boy* as being able to divide a note into 100 parts, and he invited 'all Masters and others of curious and Nice Ears' to visit his house in Wyne Office Court, Fleet Street, to witness his demonstration of such a feat. A sore point with Harris had been the choice of his rival to build the St Paul's Cathedral organ (finished in 1697), and in about 1712 he produced a pamphlet describing an organ he wished to build at the west end of the cathedral: it would comprise 'six entire sets of keys for the hands, besides pedals for the feet', and the sixth manual was 'to be adapted for the emitting of sounds to express passion by swelling any note, as if inspired by human breath; which is the greatest improvement an organ is capable of except it had articulation'. At Salisbury Cathedral he built a four-manual organ, borrowing 14 stops of the Great organ 'by communication' as a second Great, as well as providing a Chair organ of eight stops and an Echo of 11. There was full mutation work on both the Great and Echo organs, and eight reeds. He had an engraving published, with a flattering description of the organ's merits, which can claim to be the earliest picture of an English organ case in its own right.

Harris settled into a mature style apparently much influenced by French practice. This may have been as much the result of his court connections as of his upbringing, for he was only eight years old when the family returned to England. He handed down to John Harris and John Byfield (i), who succeeded him in the business, a tradition of reed voicing in the French manner which was noted even by 19th-century writers on the organ. His action work was generally considered superior to Smith's, and the judgment of history may well be that he was the better builder.

Harris made about 30 new organs after 1684, over half of them for London churches, and rebuilt or extensively repaired some 30 others. 12 of his cases survive, and ten organs contain pipework by him. Organs and cases which are typical of his work may be seen at St Andrew Undershaft, London (1696; the case and some pipework survive); Bristol Cathedral (1685; the main case, divided so that the original east and west fronts now stand side by side, survives, as does some pipework); All Hallows, Twickenham (formerly All Hallows, Lombard Street, 1700; a case and some pipework survive); and St James's, Piccadilly, London (1686–8; Great case from the Popish Chapel, Whitehall, carved by Grinling Gibbons and with fine figure sculpture). Other organs were built for St Lawrence Jewry (1684–5); St Michael Cornhill (1684 and 1704); Temple Church (1684); Hereford Cathedral (1686); King's College, Cambridge (1686); Jesus College, Cambridge (1688); Christ Church, Newgate Street (1690); St Bride's, Fleet Street (1694); Winchester Cathedral (1694); St Clement Eastcheap (1696); St Patrick's Cathedral, Dublin (1696–7); Christ Church Cathedral, Dublin (1697); St Andrew's, Holborn (1700); Bedford Road Chapel (1700); St Mary, Lambeth (1701); St Giles Cripplegate (1705); St Peter Mancroft, Norwich (1707); Salisbury Cathedral (1710); Cork Cathedral (1710); St James's, Bristol (1718–19); and St Dionis Backchurch (1722–4, completed by his son (3) John Harris).

**(3) John Harris** (*b* ?London, probably after 1677; *d* ?London,1743). Son of (2) Renatus Harris. He seems to have worked for his father in London after about 1715, and later apparently settled in Bristol. He took out letters of administration to his father's estate in 1725 in partnership with his brother-in-law John Byfield (i), with whom in 1726 he built an important organ for St Mary Redcliffe, Bristol. The builders gave an account of this instrument, with an engraving of the case and gallery, in an advertisement published in 1728–9, by which date they were in Red Lion Street, Holborn, London. The organ had three manuals, 'Pedals to the lower Octave of this great Organ' and '1928 valuable speaking pipes, which are considerably more than either the organ in St Paul's Cathedral or that in St Martin's Church in London'. The Great organ had 63 keys, complete from *C′*; there was a coupler (the first recorded in England); and of the 26 speaking stops, eight were reeds, including a Bassoon, a 'Vox Humane' and a 'Cromhorn'.

Fine instruments built by the partnership were those of St George's, Doncaster (1740), and St Mary's, Shrewsbury (1729, the case and a few pipes remain). The organ now at St Vedast-alias-Foster, London, was built by them for St Bartholomew-by-the-Exchange in 1732 (it retains its case and some original pipework). Other organs by Harris and Byfield were made for St Alban Wood Street, London (1728–9; destroyed in World War II), St Thomas's, Bristol (1728–9), Grantham parish church (1736), St Mary's, Haverfordwest (1737), St Lawrence, Reading (1741), and the Great Musick Hall, Fishamble Street, Dublin (1742).

After John Harris's death, Byfield and RICHARD BRIDGE seem to have inherited his sphere of influence.

MICHAEL GILLINGHAM/NICHOLAS PLUMLEY/STEPHEN BICKNELL

**Harris,** Sir **Augustus (Henry Glossop)** (*b* Paris, 1852; *d* Folkestone, 22 June 1896). English impresario. He was the son of Augustus Glossop Harris, stage manager at Covent Garden from 1853 to 1873, and grandson of the soprano Elizabeth Feron. With his brother Charles he accompanied the Mapleson Company on tour as stage manager and producer. As manager of Drury Lane (1879–94) he gave seasons by a German company under Richter in 1882 and the Carl Rosa Company from 1883. In 1887 he presented an important Italian season, the success of which led in 1888 to his taking over Covent Garden,

which, with aristocratic support, he managed until his death with great artistic and financial success. Eventually performances were given there in the original languages (previously they had all been in Italian) and Covent Garden was renamed the Royal Opera, instead of the Royal Italian Opera. Harris did much to popularize Wagner, giving *Ring* cycles at Covent Garden and Drury Lane in 1892, conducted by Mahler. He was knighted in 1891.

HAROLD ROSENTHAL/GEORGE BIDDLECOMBE

**Harris, Charles K(assel)** (*b* Poughkeepsie, NY, 1 May 1865/7; *d* New York, 22 Dec 1930). American songwriter and music publisher. Although he never learned to read or write music, he taught himself to play the banjo as a child, and at the age of 18 he became a banjo teacher and songwriter in Milwaukee. He performed his songs at amateur entertainments and attended performances of professional companies appearing in Milwaukee; he also became local correspondent for the New York *Dramatic News*.

After he had received royalties of only 85 cents for one of his songs, Harris established his own publishing company and almost immediately brought out his most successful work, *After the Ball* (1892), which was first interpolated by James Aldrich Libbey in a Milwaukee production of Hoyt's musical *A Trip to Chinatown*. After advance orders for 75,000 copies of the song, sales eventually reached some five million, and the royalties enabled him to open offices in New York and Chicago. He published his own songs and the works of other writers, including several shows produced by Weber and Fields, such as Herbert's *Dream City* and *The Magic Knight* (both 1906) and A. Baldwin Sloane's *Tillie's Nightmare* (1910). His ability to judge which songs would sell rapidly made him one of the most successful publishers of popular music in the USA (see illustration over the page). In order to promote his publications he persuaded singers with ability and reputation to perform them in their shows.

Harris was reportedly the first publisher to print a singer's picture on a song cover; a photograph of Libbey appeared on the cover of *After the Ball*. He also claimed to be the first promoter to make and use slides to illustrate a song. These were hand-coloured photographs mounted on glass and projected onto a screen, either to illustrate the story or to provide the words so that the audience could sing along; Harris often appeared as one of the song's characters.

Although none of Harris's later songs had as great a success as *After the Ball*, many were among the most popular of the period and sold more than a million copies each, including *Just Behind the Times* (1896), *Break the news to mother* (1897), *'Mid the Green Fields of Virginia* (1898), *Hello Central, give me heaven* (1901) and *Always in the Way* (1903). When Adelina Patti made her farewell tour of the USA in 1903 she commissioned a song from Harris, the ballad *The Last Farewell*.

Harris was an active member of the Music Publishers' Association. With Herbert, Sousa and DeKoven he fought to ensure the successful passage of the American copyright bill in 1909. Harris also served as the first secretary of ASCAP on its formation in 1914. He wrote the manual *How to Write a Popular Song* (New York, 1906/*R*) and an autobiography, *After the Ball: 40 Years of Melody* (New York, 1926/*R*), which includes a list of 111 of his songs.

WORKS
(*selective list*)

*all works published in New York unless otherwise stated*

*c*300 songs, incl. Kiss and let's make up (1891); After the Ball (Chicago, 1892); While the Dance Goes On (1894); Better than Gold (1895); Cast Aside (1895); Just Behind the Times (Milwaukee, 1896); Break the news to mother (1897); 'Mid the Green Fields of Virginia (1898); Is life worth living? (1899); For Old Times Sake (1900); I've a longing in my heart for you, Louise (1900); Hello Central, give me heaven (1901); I'm wearing my heart away for you (1902); Always in the Way (1903); The Best Thing in Life (1907); Songs of Yesterday (1916)

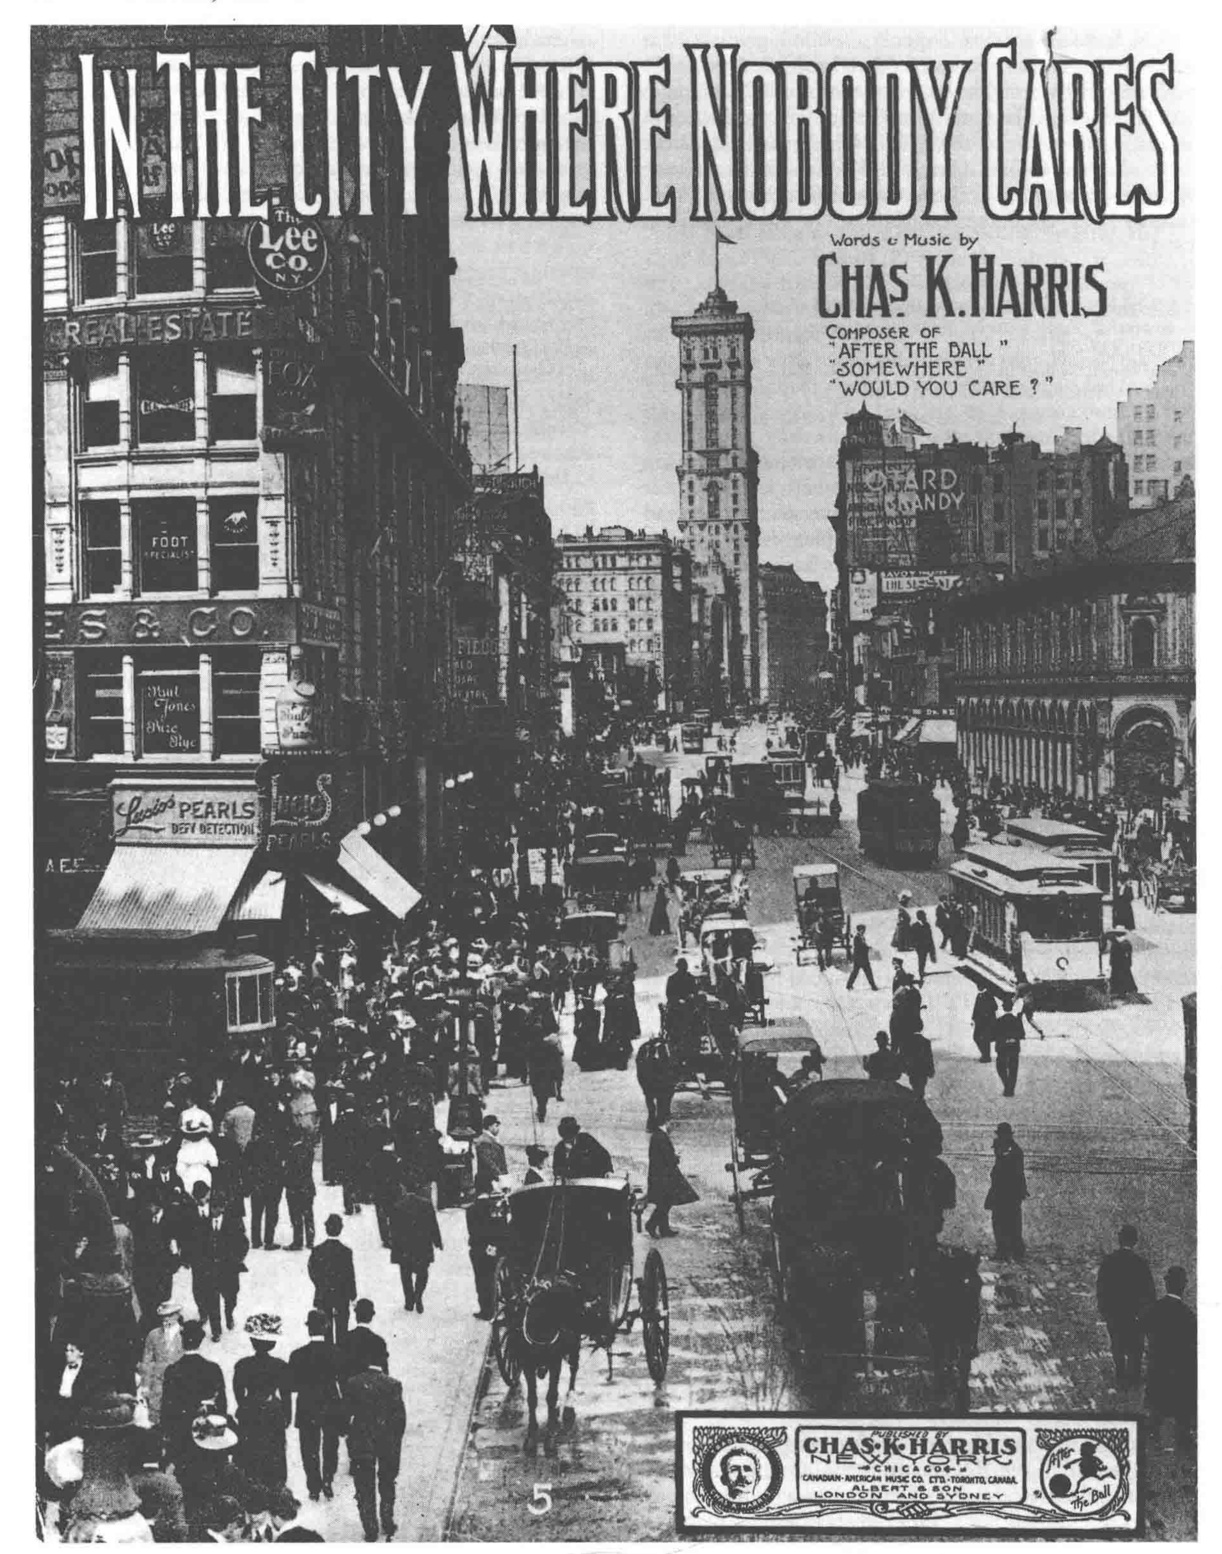
JOAN MORRIS



**Harris, Clement (Hugh Gilbert)** (*b* Wimbledon, London, 8 July 1871; *d* Pentepigadia, Epirus, 23 April 1897). English pianist and composer. The son of a wealthy shipowner, he went to Harrow (1885–6) and at the age of 17 to the conservatory in Frankfurt, where he studied the piano with Clara Schumann. As a guest in the house of Eduard Speyer, he met Cosima Wagner's daughter Daniela Thode, Siegfried Wagner, the painter Hans Thoma and Engelbert Humperdinck. He became the reader and travelling companion of the blind composer Alexander Friedrich, Landgrave of Hesse; while travelling in Egypt, he formed a friendship with the landgrave's adjutant, Theodor von Flotow. On his return to London he became friendly with Oscar Wilde; Harris played the music of Wagner, Beethoven and Schumann to Wilde, who responded by writing essays on the arts.

At the recommendation of Cosima Wagner, whom he had visited in Bayreuth, Harris studied composition at Heidelberg University with Philipp Wolfrum, in whose Bachverein concerts he often played the piano or harpsichord. He invited Siegfried Wagner to accompany him on a cruise of East Asia, and it was on this trip that Wagner decided to devote himself to the Bayreuth festivals. On the same trip Harris received inspiration for his symphonic poem, *Paradise Lost*, which was first performed on 10 July 1895 in Homburg, in the presence of the Prince of Wales, the King of Belgium, Grand Duke Mikhail of Russia and the Grand Duchess of Mecklenburg-Schwerin. Harris had plans for a second symphonic poem, based on Byron's *Corsair*, but he enlisted in the Greek army and was killed at the Battle of Pentepigadia at the outbreak of the Greco-Turkish War.

WORKS

Orch: Paradise Lost, sym. poem, after J. Milton, 1895 (Mainz, 1902); Festival March (London, 1896)

Chbr and pf: Romance, vn, pf, 1893–4 (Mainz, 1902); 4 études de concert, pf (Mainz, 1893–7): Le printemps, L'été, L'automne, L'hiver; 2 Studies, pf (London, 1897): Il penseroso, L'allegro; Romance, cl, vc, pf (Mainz, 1902); Ballade, f, pf

*Sheet music cover 'The City where Nobody Cares' (1908) by Charles K. Harris*

For 1v, pf: Six Songs, 1893–6 (London, after 1897): Faith (V. Galway), Forget me not, Absence, The Return, Hope, The Vision (text of nos.2–6 by Harris); Songs of the Sea (A. Herbert) (Mainz, 1902): Yes I shall go, A grace, to-night

FRIEDRICH BASER

**Harris, Ellen T(urner)** (*b* Paterson, NJ, 4 Dec 1945). American musicologist. After studying at Brown University (BA 1967) she began graduate work at the University of Chicago, with Howard M. Brown, Edward Lowinsky, Robert Marshall and Leonard Meyer, and she earned the MA (1970) and the PhD with a dissertation on Handel (1976). She taught at Columbia University (1977–80), before joining the faculty of the University of Chicago in 1980, where she chaired the music department (1984–8) and was appointed professor in 1988. She then became professor at Massachusetts Institute of Technology in 1989 and associate provost (1989–96), and in 1997, she was made Class of 1949 Professor. Her scholarly interests include Handel, Purcell, performing practice (especially the Baroque period and vocal music) and opera. Her work as an administrator led to concern with arts policy and education. She has also been active as a singer, a pursuit which has influenced her research, teaching, editing and understanding of historical performance.

PAULA MORGAN

**Harris, Emmylou** (*b* Birmingham, AL, 12 April 1949). American country singer. Having come relatively late to music, she began singing folk and country music in the clubs of Greenwich Village, New York. An early album, *Gliding Bird* (Jub., 1969), while uneven, revealed her eclecticism. A year later she moved, via Nashville, to California where she worked with Gram Parsons, singing on his albums *GP* (Rep., 1973) and *Grievous Angel* (Rep., 1974). Having been offered a contract with Reprise, in 1975 she released the album *Pieces of Sky*, which drew the old and new country styles together and included the song *Boulder to Birmingham* and Lennon and McCartney's *For No One*. Subsequent albums presented a similar mix, drawing from the repertory of rock, rhythm and blues, old and new country, bluegrass and cajun. Throughout, the unifying thread was Harris's uniquely expressive voice. She received gold discs for a number of albums and became the most honoured female artist in country music history. However, despite continued success as a live performer, her 1980s recordings fared poorly and it was not until the mid-1990s that she once again found her métier, with *Cowgirl's Prayer* (Grapevine, 1993) and *Wrecking Ball* (Grapevine, 1995), the latter an audacious collaboration with producer Daniel Lanois. Her distinctive voice can be heard on numerous albums including Dylan's *Desire* (Col., 1976) and the Grammy-winning *Trio* (WB, 1987), with Dolly Parton and Linda Ronstadt.

During the mid-1970s Harris helped to reinvent country music by fusing West Coast rock and East Coast folk with Southern styles. Throughout her career she has shown a knowledge of and respect for country music traditions and has paved the way for such neo-traditionalists as Nanci Griffith and Mary Chapin Carpenter. In 1996 she was honoured with the Gibson Lifetime Achievement Award.

LIZ THOMSON

**Harris, James** (*b* Salisbury, 20 July 1709; *d* Salisbury, 22 Dec 1780). English writer and musical amateur. He was the eldest son of James Harris by his second wife, Lady Elizabeth Ashley Cooper, sister of the 3rd Earl of Shaftesbury. He studied at Oxford and at Lincoln's Inn, and was MP for Christchurch from 1761, holding various government offices. He wrote on many subjects, including music. He patronized Salisbury musicians and brought London performers to Salisbury through his association with the Salisbury Subscription Concerts (also known as the Society of Lovers of Musick), and from the mid-1740s was consultant and occasional manager of the Annual Musical Festival, for which he directed from the harpsichord and supplied music, some of it of his own composition. His library contained much music, including Italian and Elizabethan works. Handel and Sacchini (his daughter Louisa's teacher) visited him, and he may also have known Pepusch. His *Three Treatises . . . the Second Concerning Music, Painting and Poetry* (London, 1744) follows an aesthetic theory derived from the 3rd Earl of Shaftesbury; it breaks with the traditional view of music as a mimetic art, and argues that the union of music and

poetry produces 'a Force irresistible, and penetrates into the deepest Recesses of the Soul'. His musical theories anticipate those of Gluck.

While he was alive, Handel was Harris's greatest musical inspiration; his brother Thomas Harris (1712–85) was a witness to Handel's will. It has been suggested that after the composer's death Harris compiled the catalogue of works that accompanied John Mainwaring's biography (1760), though the evidence of his authorship is rather thin. He was prompted by Charles Jennens to draft the libretto of *L'allegro ed il penseroso*, which was then completed by Handel and Jennens himself. Surviving correspondence from Handel to Harris's brother Thomas (*GB-WCr*) throws light on Handel's working methods, his performers and performances, and the state of his health. Harris gave some small assistance to Charles Burney with his *General History of Music* (London, 1776–89), for which his daughter Gertrude sent him examples of Russian music between 1777 and 1779. Fanny Burney (*Memoirs of Doctor Burney*, London, 1832) recalled Harris as a man 'whose soul seems all music'.

He composed and arranged music for use in Salisbury. His pastorals, *Daphnis and Amaryllis* (including arias using music by Handel) and *Menalcas* (both lost), were performed many times, the former as *The Spring* at Drury Lane on 22 September 1762, with the Salisbury chorister Thomas Norris in the leading role. In London in 1800 Thomas Corfe published *Sacred Music Dedicated . . . to the Right Hon. Earl of Malmesbury . . . Adapted to Some of the Choicest Music of the Greatest Italian and Other Foreign Composers . . . by the Late James Harris Esq*, a collection of Harris's arrangements of music by Pergolesi, Jommelli and others. It contains a full orchestral and choral setting of *Milton's Hymn* from *Paradise Lost*, on the model of a Handel oratorio, with nine linking recitatives apparently composed by Harris, and settings of the *Te Deum*, *Jubilate* and other anthems, with two recitatives by Harris.

CLIVE T. PROBYN

**Harris, John** (*b* Staines, 1672; bur. Brasted, Kent, 1 May 1731). English trumpet maker. He was bound as an apprentice to William Bull in 1686, taking his freedom in 1699. In 1703 he married Bull's daughter Rachel. He was appointed Queen's trumpeter in 1698 and in that year was a ratepayer in Hatchet Alley, Tower Hill; in 1718 he moved to a house in Berwick Street inherited by his wife. In 1715 he sold two silver trumpets to the Bristol Corporation (the instruments are still in the possession of the Corporation) and in 1717 he provided ten horns for the Royal Buckhounds. A trumpet by 'John Harry' was listed in the 1720 inventory of the Duke of Chandos. Another trumpet (Oxford, Bate Collection) marked 'Iohn Harris Londini fecit' (*c*1720) was rebuilt as a slide trumpet in the 19th century. His son William Bull Harris (1707/8–*c*1755) was also a trumpeter and instrument maker.

JANET K. PAGE

**Harris, Joseph** (*b* Bristol, 8 Sept 1743; *d* Liverpool, 1814). English composer. He was admitted to Oxford University on 16 March 1773, gaining the BMus on 24 March 1779. Several of his vocal works were performed in the Oxford Music Room in 1766–72 (but not the pastoral *Menalcas* attributed to him in earlier editions of *Grove*, whose libretto is by James Harris of Salisbury). He was appointed organist first of Ludlow Parish Church and later of St Martin's, Birmingham (1787). It is possible that he was the Mr Harris of Birmingham, listed by Burney, who sang bass in the Handel Commemoration concerts. The influence of Handel is prominent in his works. He published two collections of songs and six keyboard quartets op.2 (1774), unusual in that the strings are assigned a share in the melodic material and in the ornamental style of their slow movements.

ALFRED LOEWENBERG/R

**Harris, Murray M.** (*b* Illinois, 1866; *d* Van Nuys, CA, 24 June 1922). American organ builder. He was apprenticed to G.S. Hutchings in Boston, moving to Los Angeles in 1894 to start his own workshop in partnership with Henry C. Fletcher, and completed his first organ in 1895. In 1897 Fletcher left and Harris moved to a larger factory, where in 1900 he completed a large organ for the First Methodist Church of Los Angeles. Shortly afterwards he engaged William Boone Fleming, who had formerly worked for both Roosevelt and Farrand & Votey, and put his expertise in electric actions to work on a large organ for Stanford University. In 1902 the firm moved to a larger factory and began work on a magnum opus for the St Louis World's Fair, during which time the name of the firm was changed to Los Angeles Art Organ Co., and its direction passed to Fleming. Harris, meanwhile, was working temporarily as a stockbroker, but in 1906 opened a new organ factory in Van Nuys from which came several substantial instruments, including a four-manual organ for the Pasadena Presbyterian Church (1909) and an opulent house organ for Senator W.A. Clark (1911). He sold his interests to the Johnston Organ Co. in 1913 and spent the rest of his life as a stockbroker.

BARBARA OWEN

**Harris, Ross (Talbot)** (*b* Amberley, 1 Aug 1945). New Zealand composer. He studied at the University of Canterbury and with Lilburn at Victoria University of

Wellington, where he later became an associate professor. His musical output is eclectic, embracing a variety of genres and styles including chamber music, orchestral works, three operas and electro-acoustic music as well as jazz/rock fusion with his Wellington-based group Free Radicals. He has acknowledged the importance of the electro-acoustic medium for his early development, which provided an aesthetic freedom and technical control he relished. The introduction of FM synthesizers and MIDI in the early 1980s allowed him to consolidate this with works that frequently involve play on natural harmonic series, such as *Haiku* and *Harmonicity*, as well as being notable for subtle suggestions of natural environmental sounds, as in *Horn Call on Makara Cliff*. In recent years he has turned increasingly to instrumental music, where influential sources have always been Schoenberg, Berg and Stravinsky. His present work aims to reconcile aspects of tonal function and more formalized set theoretical approaches to composition, as in *... of memory ...* for orchestra. He was awarded the Queen's Service Medal in 1985, following the success of his opera *Waituhi*.

WORKS

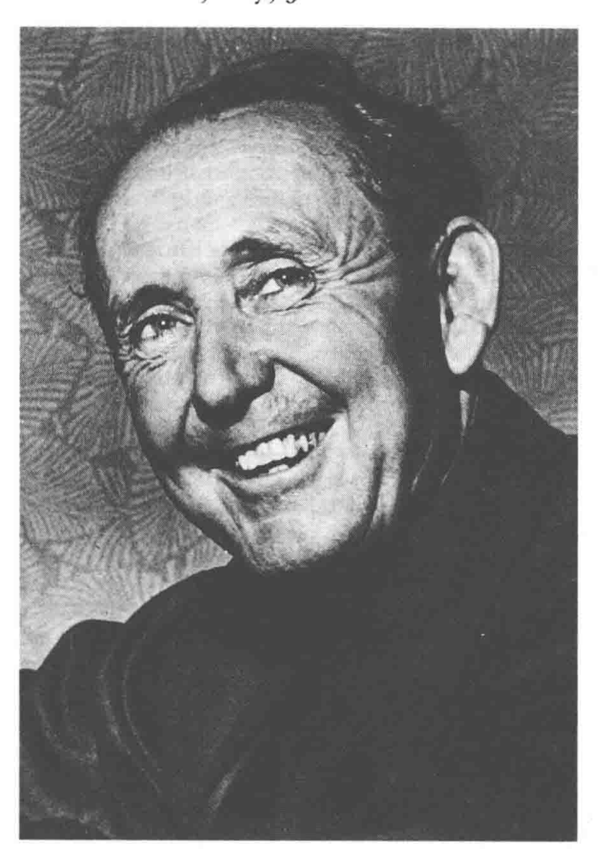
JOHN YOUNG

**Harris, Roy** [LeRoy] **(Ellsworth)** (*b* nr Chandler, OK, 12 Feb 1898; *d* Santa Monica, CA, 1 Oct 1979). American composer. He was one of the most important figures in the establishment of an American symphonic music. His works reflect a broad historical and international frame of reference and, through the influence and occasional use of Anglo-American folktunes and other materials relating to the American ethos, convey a strong nationalist element as well.

1. Life. 2. Works. 3. Style.



1. Life. Harris was reared under primitive conditions on land claimed in one of the rushes on the Oklahoma Panhandle. In 1930 the family moved to the San Gabriel (California) Valley, where Harris farmed with his father, eventually earning his own land. During his teens he shortened his given name to Roy. His first music instruction, on the piano, was from his mother; later he took up the clarinet. Harris recalled being profoundly affected by the sounds of nature and by train whistles echoing in the valley.

After graduating from high school in 1916, Harris studied at what is now UCLA (1917) and the University of California at Berkeley (1918, 1921), where he first attempted large-scale composition. During 1924–5 he studied with Arthur Farwell, who encouraged him to explore music from a fresh viewpoint and introduced him to Walt Whitman's poetry, of which he later made numerous settings. Among his other early teachers and advisers were Clifford Demorest, Ernest Douglas, Alec Anderson, Fannie Charles Dillon, Henry Schoenfeld, Modeste Altschuler and Arthur Bliss. In 1926 he travelled east for the première of his Andante for orchestra, staying at the MacDowell Colony, where he met Copland, who encouraged him to study with Boulanger. He did so from 1926 to 1929, with financial assistance from Alma Wertheim and, in 1927 and 1929, Guggenheim fellowships (he received a third in 1975). Under Boulanger's tutelage, he wrote the Concerto for piano, clarinet and string quartet, whose première in Paris established him as one of the more promising young American composers. The figures to whom he acknowledged the greatest debt during these years were Bach, Beethoven, and some of the great Renaissance polyphonists.

In 1929 he injured his spine in a fall and returned to the USA. Immobilized following surgery, he learned to compose away from the piano, refining his concepts of melody, harmony and texture. After convalescing he taught at Mills College and received a creative fellowship from the Pasadena Music and Art Association (both 1931–2). His first national recognition came through Koussevitzky, for whom he wrote his first symphony, the 'Symphony 1933'. In 1934 he joined the Juilliard summer faculty and met Beula Duffey, a young Canadian pianist and faculty colleague. They were married in October 1936 (Harris had had three previous marriages, the first producing a daughter, Jean, and an extramarital liaison resulting in a son, Phillip Barrett). The composer renamed his bride Johana, after J.S. Bach. The couple had five children between 1943 and 1957.

Johana often served as technical consultant on her husband's piano writing, assisting in rendering it more idiomatic and, in the case of a very few works, even suggesting keyboard textures or expanding on designs established by the composer (e.g. in the *American Ballads* and the Fantasy for organ, brass and timpani). She also contributed valuable help in revisions of piano parts. However, Louise Spizizen's claims (1993) that her contributions went further, to the point of composing under her husband's name, are unsupported by stylistic evidence or by the considerable body of materials that has so far come to light.

Harris taught briefly at Mills College (1933). Following his association with Mills College, Harris held positions at the Westminster Choir School (later College; 1934–38) and Juilliard (summers only, 1934–38). He also held positions with Cornell University (1941–43), the Colorado College (1943–8), the Utah State Agricultural

1. Roy Harris, c1955

College (1948–9), the Peabody College for Teachers (1949–50), Pennsylvania College for Women [Chatham College] (1951–6), Southern Illinois University (1956–7), Indiana University (1957–60), the Universidad Interamerican de Puerto Rico (San Germán, 1960–61), UCLA (1961–70), the University of the Pacific (1963–4) and California State University, Los Angeles (1970–76). Among his best known pupils were William Schuman and Peter Schickele. His teaching was idiosyncratic, involving adaptations of the church modes and examinations of individual compositions, including his own work in progress.

Besides teaching, he supported the Composers' Forum-Laboratory (established 1935) and organized numerous music festivals, the most ambitious being the 1952 Pittsburgh International Festival of Contemporary Music. He also founded the International Congress of Strings in 1959, served as chief of music programming for the overseas branch of the Office of War Information (1945–8), and visited the USSR in a delegation of American composers sponsored by the US State Department (1958).

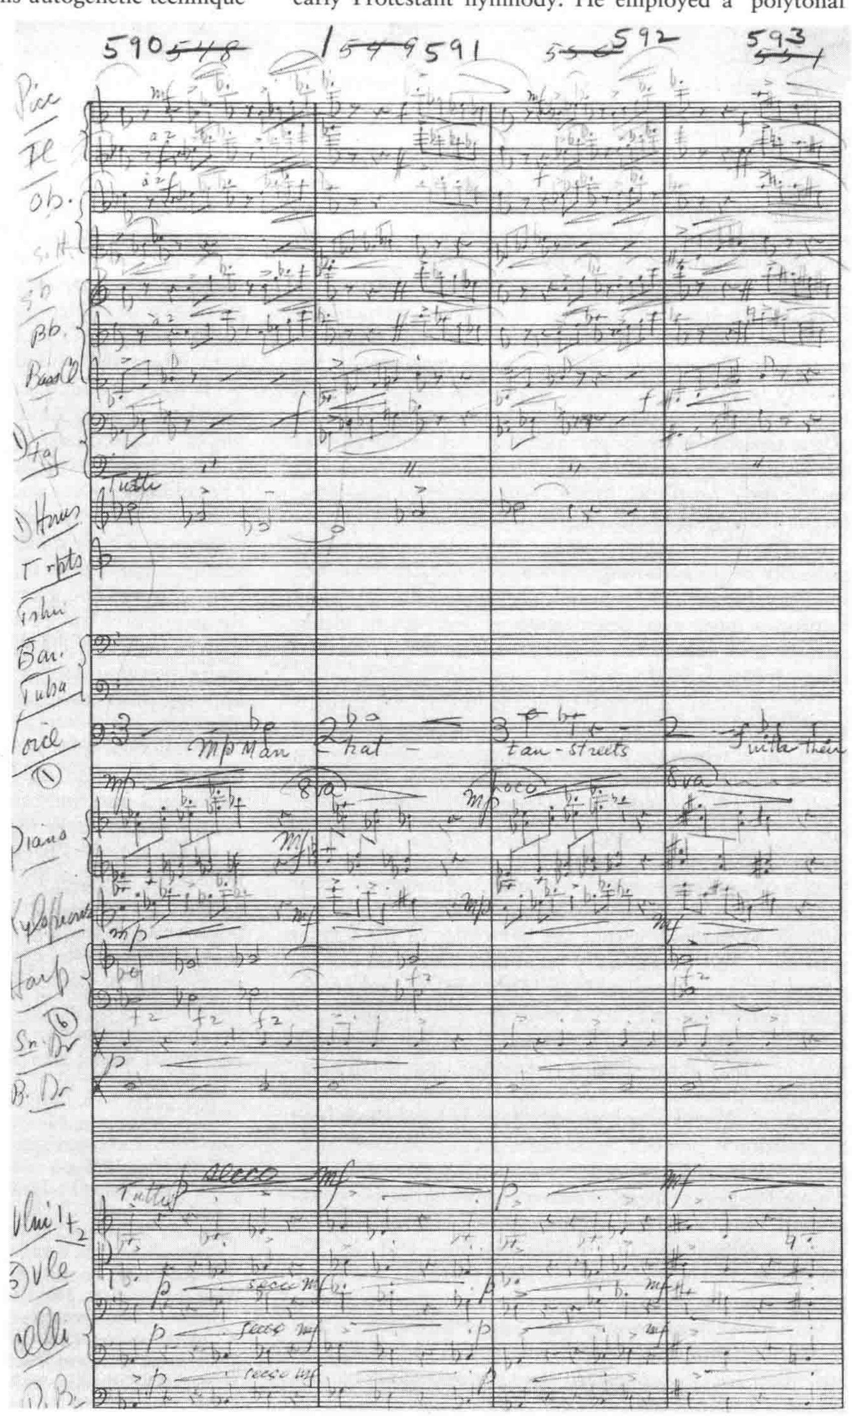
Harris was assertive, bold and earthy in temperament, capable of both great anger and robust humour. His behaviour was also sometimes erratic and some who knew him saw marked mood swings. This has led a few observers to conclude that he suffered from bipolar disorder. While a member of the family was indeed treated for this ailment, the composer himself was never officially examined for or diagnosed with it, and such claims must remain unproven.

Although Harris's popularity declined during the 1950s and 1960s, interest in him revived during his last years. In 1973, the Roy Harris Archive was established at California State University, Los Angeles, and in 1979 a Roy Harris Society was formed to promote performances, recordings, publications and research, achieving success in some of these areas during its short life.

2. WORKS. Harris composed over 200 works in a wide variety of genres, but his symphonies and chamber music have earned the highest regard. Characterized by broad, at times rhetorical, gestures and visionary aspiration, these works contain some of his most striking music as well as characteristic flaws.

Possibly Harris's most significant contribution to the symphonic literature was his exploration of the single-movement form. Four of his symphonies (nos. 3, 7, 8 and 11) employ this design, most containing recurring melodic ideas that help create unity. In his multi-movement symphonies the tempos and characters of the individual movements sometimes correspond with those of the Classical model, though the forms often differ. The Third Symphony is the best known, but nos. 4, 6, 7 and 8 are, in their individual ways, of equal or superior stature. Nearly all the shorter orchestral and band works bear descriptive titles. They are uneven in quality, but the finest, such as *Chorale for strings*, *Epilogue to Profiles in Courage–JFK*, *Kentucky Spring*, *Memories of a Child's Sunday*, *Ode to Friendship*, *Symphonic Epigram*, *Time Suite* and *When Johnny Comes Marching Home*, contain many felicities and skilful craftsmanship.

Harris's chamber compositions tend to be more intensively polyphonic than the orchestral works, with greater characterization of the individual parts. Most are for strings, from which the composer sometimes demanded an almost orchestral sonority. The most substantial works include the Piano Quintet, the String Quartets nos.2 and 3, the Violin and Violoncello Sonatas, and *Soliloquy and Dance* for viola and piano. The Quintet, in three interconnected movements based largely on a single theme, has an expansive breadth of architecture and great intensity of expression; the Third Quartet, a set of preludes and fugues on modal subjects, exemplifies Harris's individual approaches to modality and traditional counterpoint.



In his concertante works Harris did not always fully exploit the idiomatic resources of the solo instruments; nevertheless, he sometimes created works of depth and polish, such as the Fantasy for piano and orchestra and the Two-Piano Concerto, sometimes using a one-movement form incorporating variation procedures. His small number of solo piano works includes a group of folksong arrangements, *American Ballads*. The Piano Sonata (1928) exhibits the lean textures, angular lines, rhythmic complexity and grandeur that mark his early works.

Choral compositions form an important part of Harris's output. His early efforts are somewhat instrumental in nature, with occasionally awkward prosody, but many of the pieces written as he matured reveal sensitivity and practicality gained from experience in writing for both amateur and professional groups. Notable are the Symphony for Voices and the 'Folksong' Symphony (no.4); the former features some affecting onomatopoetic writing and one of the great 20th century choral fugues, while the latter reveals a high level of technical skill and demonstrates colourful variety in its symphonic treatment of

ethnically diverse folksong materials. The vocal works also comprise a few exquisitely crafted and deeply expressive songs (notably a setting of Sandburg's *Fog*) and some substantial solo cantatas. Of these, *Abraham Lincoln Walks at Midnight* and *Give me the Splendid Silent Sun'*, (fig.2) represent a peak in his creativity, craftsmanship (especially in the integration of contrasts within gradually unfolding large structures) and handling of prosody.

Harris showed little affinity with the theatre or film, finding it difficult to reconcile his autogenetic technique with sudden changes of scene and character or the musical depiction of specific actions. But the ballet *From this Earth* and the film score *One-Tenth of a Nation* contain many distinctive ideas and textures, and amplify the emotional resonance of the underlying drama affectingly.

3. STYLE. Harris's melodies, in their contours, modality and flexibility of phrase structure, owe a debt to monophonic chant, Renaissance choral polyphony, Anglo-American folk music, African-American spirituals and early Protestant hymnody. He employed a 'polytonal'

2. *Autograph MS (bars 590–93) of Harris's cantata for baritone and orchestra 'Give me the Splendid Silent Sun', 1955, revised 1956*

adaptation of the church modes, in which melodic phrases are often based on a combination of different modes built on the same tonic, this providing varying 'inflections' of scale degrees.

His harmonic idiom is based on the overtone series. The most important intervals were for him the perfect 4th and 5th (his 'organum' sonorities). The earliest surviving compositions, however, at times suggest the influence of Franck and Skryabin, possibly owing to his studies in France. During the 1930s he pared his vocabulary to the major and minor triads, from the mid-1940s these generally being used in polychords for which he developed a classification within a harmonic spectrum ranging from 'savage dark' to 'savage bright'. He ranked the harmonies on the spectrum according to the degrees to which the notes of the upper polychordal member are reinforced by the overtones of the lowest note of the lower member, and also used the overtone series to rank the three positions of a triad. His chord movement is founded on an extended set of relationships derived from the dominant and subdominant areas of a given tonal centre by means of common-tone connections. Root movement is often by 3rds, though 4ths, 5ths and 2nds also appear, particularly at cadences. He believed that 'harmony should represent what is in the melody, without being enslaved by the tonality in which the melody lies'. Thus one sometimes experiences a tension between the harmonic implications of the melody, with its prevailing modal mixtures, and the supporting chords. Harris also regarded harmony as having three functions: in the archictecture of tonalities, for the delineation of melodies and for dynamic resonance.

In Harris's rhythmic style, slow, lyrical passages generally begin with long notes and gradually introduce smaller values, which eventually prevail; fast music usually features a more even distribution of note-values within phrases and sometimes employs asymmetrical metres. Phrase length is fluid.

The fundamental formal principle in Harris's music is autogenesis, by which a melody is generated by a seed motif out of which the first phrase grows, each succeeding phrase either germinating in like fashion or launching itself from a figure in the last bars of the preceding phrase. His aim was to produce an effect of gradual organic growth, and thus the music often unfolds additively in blocks of gradually differing textures. Though some of the livelier music contains sharp contrasts, these are difficult to manage within the principles of his formal aesthetics, and occasionally seem awkward and unsupported by strong musical logic. Other forms and procedures Harris used are theme and variations, fugue (often a hybrid fugue-variation type) and ternary form (either ABA or ABC), these designs reconciled with his autogenetic precepts.

In the treatment of polyphony, the early works, indebted to traditional practice, sometimes seem contrived, producing awkward harmonic results. In his mature idiom, the counterpoint emerges from a clearer harmonic background. However, he sometimes succumbed to the use of bland arpeggiations in creating his lines and did not always succeed in achieving a sense of rhythmic independence among the parts.

Harris's orchestration is clear, even lean in his early scores, with little doubling of parts. Motifs and figurations are idiomatically conceived for the instruments. His layout is generally conventional, but in some scores from the 1940s on he used saxophones, baritone horn and a grouping of piano, harp, chimes and vibraphone that provided a bell-like chordal punctuation. In addition to his orchestral achievements, Harris was a pioneer in exploring the resources of the concert band. Overall, he preferred to score in discrete choirs. He treated the strings especially flexibly, allotting them both extensive melodic and accompanimental functions, usually with a complete harmonic texture. An increasing use of *divisi* during the 1940s and 1950s imparts a growing lushness to the sound. In his brass writing, he often liked to play off the 'sharp-tone' instruments (trumpets and trombones) against the 'round-tone' ones (horns, baritone horn, tuba).

In addition to his use of folktunes in arrangements and as thematic materials, other Americanist traits in Harris's music are his employment of popular dance rhythms and elements of jazz, and his partiality to such figures as Whitman and Lincoln. Many of his compositions are programmatic, based on folk legends, the American social scene, or celebrating patriotic occasions; for much of his career he tended to depict in such music an idealized vision of America, but later he tempered this with a great awareness of contemporary problems, sometimes engaging in biting social commentary to express his commitment to racial equality and justice.

He was a prodigious reviser and self-borrower, reworking themes, even entire compositions, in creating new pieces. This resulted from a sometimes wavering technique and a lack of firm self-criticism when composing (though he could be ruthless once a work was finished). His music reveals a dual nature: there is the extrovert, 'civic' composer whose music suggests, especially through its steady, organic growth, a visionary aspiration marked by large gestures and great thematic expanses. There is also the miniaturist: here Harris is sometimes more successful than in his larger efforts; in many of the unaccompanied choral pieces and short piano compositions, his technique appears more assured, the means more concise than elsewhere.

Harris's stature is still a matter for debate. He is difficult to evaluate when only a tiny portion of his music is performed and the scores of most of his works are not readily accessible, though an increase in recording activity in recent years has begun to remedy this. Some observers believe he failed to fulfil his early promise, suffering an arrested technical and stylistic development, while others perceive an increasing mastery of technique and a growing sophistication (sometimes at the expense of raw originality and vitality of the earlier works) as his career unfolded. No doubt controversy will continue, for the musicality, breadth of vision and generosity of impulse that form his best music assure him long-term recognition.

WORKS

DRAMATIC

One-Tenth of a Nation (film score), A, chbr ens, 1940; rec. New York, *c*Aug 1940

From this Earth (ballet, 5 scenes), chbr en, 1941; Colorado Springs, 7 Aug 1941

Namesake (A Theatre Dance) (ballet, 9 scenes), vn, pf, 1942; Colorado Springs, 8 Aug 1942, 4 movts pubd as 4 Charming Little Pieces, vn, pf

What so Proudly we Hail (Dance Suite Based on American Folk Songs) (ballet, 5 scenes), wordless vv, str, pf, 1942, scene 4 lost; Colorado Springs, 8 Aug 1942

Ballet on the Subject of War [? = Walt Whitman Suite, see CHORAL]

Turn on the Night (Crocodile Smile) (incid music, J. Lawrence, R.E. Lee), chbr ens, 1961; Philadelphia, 7 Aug 1961

DAN STEHMAN

**Harris,** Sir **William H(enry)** (*b* London, 28 March 1883; *d* Petersfield, 6 Sept 1973). English organist, choirmaster and composer. Already an FRCO, he won an organ scholarship to the Royal College of Music in 1899 and studied under Parratt; his composition teachers were Charles Wood and Walford Davies, to whom he became assistant organist at the Temple Church. After several appointments in London he was called to Lichfield Cathedral as assistant organist; during his time in the Midlands he served on the staff of the Birmingham and Midland Institute. He succeeded Hugh Allen at New College, Oxford, in 1919, and in 1921 he joined the RCM as professor of organ and harmony, a post he retained until 1953. In 1929 he moved from New College to Christ Church Cathedral and from there to St George's Chapel, Windsor, in 1933. He was conductor of the Bach Choir (1926–33) and directed the Balliol Concerts (1925–33). While in Oxford he had helped to found the university opera club with Westrup and he conducted a historic production of Monteverdi's *Orfeo* in 1925. Harris was made a CVO in 1942 and a KCVO in 1954. He was president of the Royal College of Organists (1946–8) and director of musical studies at the Royal School of Church Music from 1956 to 1961, the year he also resigned his appointment at Windsor.

A fine choir trainer, he maintained a high standard throughout his career, being more comfortable with small professional choirs than large amateur ones; the great ceremonial services and festivals which he organized at Windsor bore witness to his devotion. As a composer he remained conservatively entrenched in the Anglican tradition. His best work, the double choir motet *Faire is the Heaven* (Spenser, 1925), has a spaciousness of conception and a richness that make it a worthy offspring of Parry's *Blest Pair of Sirens*, and his Donne settings – *Thou hast made me* (1947) and *Bring us, O Lord* (1959) – are of similar quality. He contributed *O quanta qualia* and *Michelangelo's Confession of Faith* to the Three Choirs Festivals of 1934 and 1935 respectively, and he wrote music for the coronations of 1937 and 1953, but his biggest piece was the setting of Francis Thompson's *The Hound of Heaven* (1919). Of his organ compositions the Four Short Pieces of 1938 (the first composed in the Leipzig Thomaskirche in 1931) and the *Flourish for an Occasion* (1948) have proved the most popular. Harris's music is published principally by Novello.

CHRISTOPHER PALMER/DUNCAN J. BARKER

**Harrison.** English firm of music publishers, established in London. The origins of the firm are unclear, but its musical activities extended for 20 years from about 1783, when it was under the direction of James Harrison (*b* London, 1765; *d* London, 20 March 1847). His father, also James (1730–69), had been a printer and after his death his widow Mary or brother Thomas, although both involved in other firms in the 1770s, may have been behind the creation of Harrison & Co., which is found as a name by 1778, and which the son evidently took charge of as soon as he was old enough. Music was added to general publishing and bookselling activities from about 1783, including many useful reprints of works such as Arne's *Comus*, *Lyric Harmony* and *Thomas and Sally*,

Greene's *Spenser's Amoretti*, Boyce's *The Chaplet* and *Solomon*, Handel oratorios and old ballad operas. These were issued from 1783 in the form of a periodical publication in oblong folio format, entitled *The New Musical Magazine* and almost certainly edited by Samuel Arnold. Selling at 1s. 6d. a part (16 pages) it enabled a complete vocal score of *Messiah* to be bought for only 7s. 6d. In addition, each early number had a sheet of letterpress which comprised part of *An Universal Dictionary of Music ... and a General History of Music*, probably compiled by Thomas Busby but unfortunately never completed. An unusual sales promotion was also given to *The Pianoforte Magazine*, a popularly priced octavo publication of operas, songs and piano pieces, started in 1797 and issued in weekly parts until 1802; each part contained a voucher, and purchasers of the entire set were apparently entitled to a free piano. Other periodical publications, which were a speciality of the firm, included *Harrison's New German Flute Magazine* (1787, also edited by Arnold), *The Lady's Musical Magazine* (1788) and *The Gentleman's Musical Magazine* (1788).

In January 1797 James Harrison was declared bankrupt but the firm re-emerged in the same year as Harrison, Cluse & Co., the new partner probably being the bookseller Samuel Cluse. It reverted to being James Harrison & Co. about 1803, by which time the musical side of the business had apparently been given up.

FRANK KIDSON/WILLIAM C. SMITH/PETER WARD JONES

**Harrison, Beatrice** (*b* Roorkee, India, 9 Dec 1892; *d* Smallfield, Sussex, 10 March 1965). English cellist. She studied with Whitehouse at the RCM and in 1907, while still a student, made her London début playing the Saint-Saëns A minor Concerto with Sir Henry Wood at the Queen's Hall. She completed her studies with Becker at the Hochschule für Musik, Berlin, and at 17 was the youngest competitor and the first cellist to win the Mendelssohn Prize. She made her European début in 1908 in Berlin, playing the Brahms Double Concerto with her sister, MAY HARRISON, and her début recital in 1910. From this time she toured as a soloist in Europe, and in 1913 was the first female cellist to appear at Carnegie Hall in New York. Besides the standard repertory, Harrison played many works by modern composers. She gave the premières of Bax's Cello Sonata and Ireland's Cello Sonata, and in 1924 gave the first British performance of Kodály's unaccompanied Sonata. A lifelong friendship with Delius resulted in him writing his Double Concerto for her and May. He also wrote his Cello Concerto for her and, although Barjansky gave the première in Vienna, Harrison gave the first British performance in 1923 under Eugene Goossens. Her association with Elgar began in 1919 when he asked her to record his Cello Concerto for HMV. The complete recording with the composer conducting was eventually made in 1928 and is of great musical and historic value, not least because all Elgar's directions were followed meticulously. She played a fine cello by Pietro Guarneri, formerly in the Knoop Collection. Her autobiography, written towards the end of her life, was published posthumously (*The Cello and the Nightingale*, London, 1985).

MARGARET CAMPBELL

**Harrison, Frank** [Francis] **Llewelyn** (*b* Dublin, 29 Sept 1905; *d* Canterbury, 29 Dec 1987). Irish musicologist. As a boy, he sang at St Patrick's Cathedral, Dublin; he studied at the Royal Irish Academy of Music, and matriculated at Trinity College, Dublin, gaining the MusB in 1926 and the MusD in 1929. From 1935 to 1946 he was Musician in Residence and subsequently assistant professor of music at Queen's University, Kingston, Canada, spending the last year of his tenure there as a postdoctoral Fellow of Yale University, where he studied with Leo Schrade and Hindemith. He was a professor at Colgate University (1946–7) and Washington University, St Louis, until 1952, when he was appointed lecturer at Oxford University; he later became senior lecturer and reader in the history of music at Oxford. He was a visiting professor at Yale (1958–9) and a Fellow at the Center for Advanced Study at Stanford, California (1965–6). In 1961 and again in 1968–9 he was a visiting professor at Princeton University and he left Oxford in 1970 to become professor of ethnomusicology at the University of Amsterdam. In 1976–7 he was visiting lecturer in medieval music at the University of Utrecht, and he also visited Queen's University, Kingston (1981), and the University of Pittsburgh (1981). He was elected a Fellow of the British Academy in 1965, and in 1974 Queen's University, Kingston, made him an honorary Doctor of Laws.

Harrison's studies range from European medieval music to ethnomusicology. His research into English music occupied 20 years; the most important of the many resulting publications was his edition of the Eton Choirbook which made a large collection of early Tudor antiphons available for the first time. In his work for the series Early English Church Music (founded on his initiative; he was general editor from 1961 to 1972) he helped in the preparation and publication of a dozen editions; from 1962 to 1974 he was general editor of Polyphonic Music of the Fourteenth Century. Among Harrison's writings, *Music in Medieval Britain* (1958) is a pioneering study and it soon became a standard reference work. His fields of inquiry also include the social history of Western music, and folk music of Ireland, Scotland, Wales, Canada and several countries in Latin America. Ethnological and sociological questions came increasingly to occupy him from the late 1960s, but he never abandoned his commitment to Tudor music and late medieval continental polyphony. Nevertheless, Harrison's intellectual apprehension of the sociology of music – a subject which dominates his radical reinterpretation of the function of musicology itself – must be identified as a singular and enduring contribution to the history of musicological ideas. The anthology *Time, Place and Music* (1973) and his contribution to *Musicology* (1963), in particular, provide important sources for Harrison's exposition of an anthropological species of musical thought, no less committed to the sociology of music than

to its transmission, presentation and interpretation. His own breadth of attainment – as composer, scholar, editor, fieldworker, intellectual historian, cultural historian and professional musician – endowed Harrison with an uncommonly wide range of insights.

DAVID SCOTT/HARRY WHITE

**Harrison, G(eorge) Donald** (*b* Huddersfield, 21 April 1889; *d* New York, 14 June 1956). American organ builder of English birth. A graduate of Dulwich College, he joined his father's firm of patent agents in 1912, and served in the RAF during World War I, entering the London organ-building firm of Henry Willis & Sons in 1919. There he became an assistant to Henry Willis III, learning pipe voicing and design, and in 1921 he was elected a director of the firm. In 1927 Harrison accepted a position as assistant general manager with the Ernest M. Skinner Co. in Boston, and the following year collaborated with Skinner on the large organs in Hill Auditorium at the University of Michigan and Rockefeller Chapel in Chicago, where he introduced Willis-style choruses and other tonal innovations. By 1931, when the firm merged with the Aeolian Company, differences in tonal philosophy had begun to divide Harrison and Skinner, with many clients favouring Harrison's approach, and in 1933 Harrison was appointed technical director. Three years later Skinner left, but by this time large contracts such as that for Grace Cathedral in San Francisco (1934) were being designed and overseen entirely by Harrison. During the 1930s Harrison's English tonal philosophy began to be influenced by the 'organ reform' movement, and after a visit to Germany in 1937 he began to introduce Baroque-inspired flutes and reeds into what would become known as 'American classic' tonal designs, of which the organ in St Paul's Chapel, Columbia University (1939), was a notable example. After the hiatus of World War II, two important commissions, the rebuilding of the Walcker organ in the Memorial Music Hall, Methuen, Massachusetts (1947), and the large new organ for the Mormon Tabernacle in Salt Lake City (1948), consolidated this eclectic tonal philosophy which was to strongly influence American organ building for the next two decades. The popularity of this approach made the Aeolian-Skinner

firm the leader in the 1940s and 50s, and Harrison was almost overwhelmed by the quantity of work for which he was contracted. He visited Europe again in 1955 and while he took note of the burgeoning 'neo-Baroque' movement there, was of the opinion that it was not applicable to American churches. Nonetheless, he continued experimenting with scales and voicing right up to his last instrument, the large French-influenced organ for St Thomas's, New York; while working on the final tonal finishing of this organ, he died suddenly of heart failure. His influence on American organ building was considerable, and helped to pave the way for the historically informed eclectic tonal designs of the late 20th century.

BARBARA OWEN

**Harrison, Hazel (Lucile)** (*b* La Porte, IN, 12 May 1883; *d* Washington DC, 28 April 1969). American pianist. She studied as a child with Victor Heinze and between 1910 and 1914 with Hugo von Dalan, Busoni and Egon Petri. In performing the Grieg and Chopin (op.11) concertos with the Berlin PO under August Scharrer (22 October 1904), she became the first soloist trained exclusively in the USA to perform with a European orchestra. She appeared in recitals in Chicago and several other American cities before making her formal New York début at Aeolian Hall in May 1922. While teaching at the Tuskegee Institute (1931–6), Howard University (1936–55), Alabama State A & M College (1958–63), and Jackson College, she continued her performing career: she made appearances with the Minneapolis SO under Ormandy (1932) and with the Hollywood Bowl SO under Izler Solomon (1949), and toured regularly until her retirement in the 1960s.

DOMINIQUE-RENÉ DE LERMA

**Harrison, Jonty** [Douglas Jonathan Taylor] (*b* Scunthorpe, 27 April 1952). English composer. He studied at the University of York, taking the PhD in composition there in 1980. From 1976 he lived in London and worked as a composer at the National Theatre before joining the staff at the University of Birmingham (1980); there he developed an outstanding electro-acoustic music studio and the Birmingham Electro Acoustic Sound Theatre (BEAST), a multi-speaker sound-diffusion ensemble which tours nationally and internationally. As a composer he has won many international prizes for electro-acoustic music; he is an influential teacher and mentor.

His compositions are very much in the tradition of *musique concrète*, recording a natural sound (a casserole dish in the case of *Klang*, 1982, for example) then transforming and combining it electronically in a studio. He describes his method of assembly as 'pragmatic – testing material in a given context for its perceptual, aural appropriateness, rather than according to some preconceived plan'. His compositional process he regards as 'a partnership between sound material and composer', who, he adds, 'must be sensitive to [the] material's implications for its future development'. His compositional interests are in 'ambiguities arising from making purely musical, spectromorphological connections between material also recognizable as "real", everyday sounds, thereby triggering additional "meanings"'.

STEPHEN MONTAGUE

**Harrison, Julius (Allan Greenway)** (*b* Stourport, 26 March 1885; *d* Harpenden, 5 April 1963). English composer and conductor. He was educated at Queen Elizabeth's School, Hartlebury, and with Bantock at the Birmingham and Midland Institute School of Music. His cantata *Cleopatra* won the 1908 Norwich Festival composition prize, but for 30 years conducting took priority over composition. In 1913 the Covent Garden Syndicate sent him to Paris to rehearse Wagner operas for Nikisch and Weingartner. Building on this experience, he became a fine Wagner conductor, especially for the Beecham Opera Company (1915–19). With Ronald he directed the Scottish Orchestra (1920–23) and then returned to work for Beecham as principal conductor of the British National Opera Company (1922–4). He was Director of Opera at the RAM (1924–9) and from 1930 to 1939 conducted the Hastings Municipal Orchestra, raising the standard to rival that of the Bournemouth Municipal Orchestra. His conducting career was brought to an end by the onset of deafness and by the wartime demise of the Hastings Municipal Orchestra. Thereafter he was able to give all his time to composition. Much vocal music and the once popular *Worcestershire Suite* (1917) were in print, but he had destroyed his early, Bantock-influenced work, declaring it to be 'overheated'. Now he produced a succession of substantial works, including *Bredon Hill* (1942) and the Violin Sonata (1946), works which suggest a response to Brahms and Vaughan Williams respectively. His crowning achievements were the Mass in C (1936–47) and the Requiem (1948–57), both for soloists, chorus and orchestra. These works are conservative and contrapuntally complex, influenced by Bach and Verdi respectively, and possess a mastery of texture and a massive yet balanced structure. He is the author of two books, *Handbook for Choralists* (London, 1928) and *Brahms and his Four Symphonies*, and of four contributions to R. Simpson (ed.) *The Symphony* (London, 1967), which is dedicated to his memory.

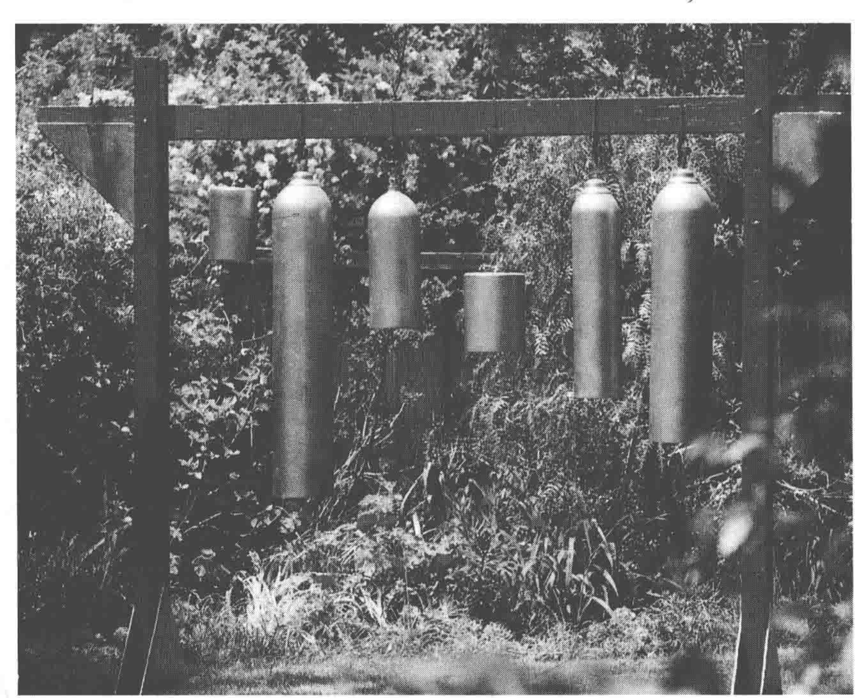
G. Self: *Julius Harrison and the Importunate Muse* (London, 1993)

GEOFFREY SELF

**Harrison, Lou (Silver)** (*b* Portland, OR, 14 May 1917). American composer. He is recognized particularly for his percussion music, experiments with just intonation and syntheses of Asian and Western styles. His works have employed Chinese, Korean and Indonesian instruments as well as Western instruments and those of his own construction. Harrison's style is marked by a notable melodicism: even his percussion and 12-note compositions have a decidedly lyrical flavour.

Harrison spent his formative years in northern California, where his family settled in 1926. Before graduating from Burlingame High School, in December 1934, he had studied the piano and violin, sung as a treble soloist, and composed keyboard and chamber works, including several quarter-tone pieces. In 1935 he entered San Francisco State College (now University), and in his three semesters there studied the horn and clarinet, took up the harpsichord and recorder in an early music consort, sang in several vocal ensembles and composed a number of works for early instruments, including a set of six cembalo sonatas.



In spring 1935 Harrison enrolled in Cowell's course entitled 'Music of the Peoples of the World' at the University of California extension in San Francisco. He soon began private composition lessons with Cowell, with whom he developed an enduring friendship. In 1936, at Cowell's suggestion, Harrison wrote to Ives requesting music for performance and, after an exchange of correspondence, received a crate of photostat scores including the songs, most of the chamber music and some orchestral works. During the next ten years he studied these compositions avidly, editing several for performance and/or publication. Through Cowell he also developed a fascination with Amerindian and early Californian culture, reflected in works throughout his career, among them the Mass to St Anthony whose vocal lines suggest indigenous melodic types that had been incorporated into 18th-century Californian mission services. The work's opening motif – a 'cry of anguish' occasioned by Hitler's invasion of Poland in 1939 – is also one of Harrison's earliest political compositions.

While in San Francisco, Harrison collaborated with several West Coast choreographers: Bonnie Bird, Carol Beals, Tina Flade, Marian van Tuyl and Lester Horton. In 1937 he was engaged by Mills College as a dance accompanist; he also taught courses in a composition for the dance at its summer sessions. Cage sought him out in 1938 on the recommendation of Cowell, and it was through Harrison that Cage was hired by Bird at the Cornish School in Seattle. At the Mills College summer sessions in 1939 and 1940, and in San Francisco in 1941, Harrison and Cage staged high-profile percussion concerts, which Harrison continued in 1942 after Cage had moved to Chicago. For a 1941 performance they jointly composed *Double Music* for four percussionists, each independently writing two of the parts. Here and in works wholly his own, notably *Canticles* nos.1 and 3, *Song of Queztalcoatl* and the Suite for percussion, the traditional battery is expanded to encompass 'found' instruments, such as brakedrums, flowerpots and metal pipes, as well as instruments from other cultures, such as the clay ocarina and the *teponaztli*, a wooden slit-drum from Mexico traditionally made from a hollow log.

In August 1942 Harrison moved to Los Angeles, where he was engaged by UCLA to teach Labanotation as well as musical form and history for dancers. He enrolled in Schoenberg's weekly composition seminar, which, he later noted, taught him the 'importance of simplicity and method' to complement the 'licence for freedom' he had learnt from Ives. The most notable work from his Los Angeles period is the Suite for piano, composed for Frances Mullen Yates.

The following year he moved to New York, where he became one of Virgil Thomson's 'stringers' at the *New York Herald Tribune* (1944–7). He also wrote for *Modern Music*, *Listen* and *View* (including studies on Ives, Varèse and Schoenberg) and published an extended essay 'About Carl Ruggles'. On 5 April 1946 he conducted the première of Ives's Third Symphony, which he had edited from the original manuscript. For this work Ives received the Pulitzer Prize of 1947 which he insisted on splitting with Harrison. In spite of these successes, however, Harrison adjusted poorly to the stress and noise of New York, first developing an ulcer and then in 1947 suffering a nervous breakdown for which he was hospitalized for nine months. He used the experience as a catalyst for change in his compositional style, eschewing the dense dissonant counterpoint of his early New York years. The period immediately after his hospitalization was one of his most productive, with the composition of *The Perilous Chapel* and *Solstice* (for the dancer and choreographer Jean Erdman), two suites for string orchestra, the Suite for cello and harp, and the Suite for violin, piano and small orchestra. Summer residencies at Reed College, Oregon, in 1949 and 1950 led to the stage pieces *Marriage at the Eiffel Tower* and *The Only Jealousy of Emer*.

In 1951 Harrison accepted a position at Black Mountain College, North Carolina, which he held for two years. There he completed several earlier works and wrote a host of new ones, including the chamber opera *Rapunzel*, a 12-note work with a melodic language that is at once rugged and lyrical. The opera's third act won a 20th-Century Masterpiece Award at the 1954 International Conference of Contemporary Music. Meanwhile the publication of Partch's *Genesis of a Music* in 1949 had stimulated Harrison's exploration of just intonation. These studies bore fruit in his *Seven Pastorales* (1949–51) and in *Strict Songs* (1955), which was composed for the Louisville Orchestra shortly after he had returned to California and settled in the rural town of Aptos. *Strict Songs* makes use of Harrison's own texts, inspired by Navajo ritual songs, and calls for the retuning of the

*Cut-off oxygen tanks: part of Lou Harrison's 'American gamelan', devised with William Colvig, 1971*

fixed-pitch instruments in the orchestra to create intervals with vibration ratios in superparticular proportions (4:3, 8:7, etc.). Harrison has not only called for similar retunings in many later compositions but has also developed a system he calls free style, in which individual pitches are determined purely by their proportional relationship to preceding and following pitches without adhering to a fixed tonal centre. His *Simfony in Free Style* (1955), a four-minute composition including viols with movable or independently placed frets and specially constructed flutes, has never been performed live with the correct instrumentation, but it has been recorded in a digital realization by David Doty. After Harrison returned to California in 1953, he for the most part abandoned 12-note serialism, which he used thereafter primarily for anti-war statements, often in the context of equal temperament, to symbolize the mechanization of Western industrial society.

During these early years in Aptos, Harrison composed two violin concertos with percussion and completed a Suite for Symphonic Strings. He also began to develop closer ties with Asia, which he visited for the first time in 1961 as a delegate to the East-West Music Encounter in Tokyo. In 1961 and 1962 Harrison spent several months in Korea and Taiwan studying, among other instruments, the double-reed Korean *p'iri* and the Chinese psaltery, *zheng*. A number of subsequent works, such as *Nova Odo* (1961–8), *Pacifika Rondo* (1963) and *Music for Violin and Various Instruments* (1967) call for ensembles of mixed Western and Asian instruments. A Phebe Ketchem Thorne award in 1966 allowed him also to spend six months in Mexico, where he wrote his *Music Primer* and composed a new finale for his Symphony on G.

In 1967 Harrison met William Colvig, an electrician and amateur musician, who became his partner, as well as a dedicated collaborator on instrument building and tuning experiments. In 1971 they constructed an 'American gamelan': a set of metallophones tuned to a pure D major scale and built from materials easy to procure (e.g. steel conduit tubing, aluminium slabs, and stacked tin cans as resonators). To these instruments they added galvanized garbage cans and cut-off oxygen tanks struck with baseball bats, thus integrating Indonesian sounds, junk materials, the percussion ensemble and just intonation (*see* GAMELAN, §II, 2). Harrison composed three works for this novel ensemble: the puppet opera *Young Caesar* (1971, rewritten as a standard opera with Western instrumentation in 1988), *La Koro Sutro* (1972, a setting of the Buddhist *Heart Sutra* in Esperanto, a language in which Harrison is fluent); and the Suite for Violin and American Gamelan (1974). Harrison and Colvig later built two additional gamelans for San Jose State University and Mills College, both modelled on traditional Javanese instruments but tuned in just intonation. After studies with the renowned performer and teacher K.R.T. Wasitodiningrat in 1975, Harrison began to compose for traditional gamelan ensembles. He has since written over three dozen gamelan works, at times combining the ensemble with Western solo instruments.

At the same time Harrison has increasingly returned to composing for Western instruments, his later works including three more symphonies, concertos, and a host of chamber compositions (e.g. the *String Quartet Set*, the *Varied Trio* and the Piano Trio). He has explored cross-cultural applications of compositional techniques, such as utilizing traditional gamelan embellishment styles in works for Western instruments (e.g. Fourth Symphony and Piano Trio), and he enjoys setting for himself compositional strictures such as permitting the use of only a limited number of melodic intervals (a process he calls 'interval control') or constructing thematic material from a restricted set of melodic or rhythmic cells.

From his earliest years in San Francisco, Harrison has articulated political views of multiculturalism, ecological responsibility and pacifism in both writings and musical compositions. Many of his early works have political

overtones (*Waterfront – 1934*, *Conquest*, *France 1917 – Spain 1937*), as do *Pacifika Rondo*, *Nova Odo*, the three *Peace Pieces* and *Homage to Pacifica*. Harrison has also been politically active in the gay rights movement: his opera *Young Caesar* deals with homosexuality and cross-cultural partnership by describing an affair between Caesar (representing the West) and Nicomedes, King of Bithynia (the East).

In addition to his musical compositions and prose writings, Harrison is a published poet, and a painter whose works have been exhibited frequently. He is renowned for his calligraphic script and has designed several computer fonts. He has taught courses in composition and world music at San Jose State University, Stanford University, Cabrillo College, the University of Southern California and Mills College.

LETA E. MILLER (work-list with CHARLES HANSON)

**Harrison, May** (*b* Roorkee, India, 23 Aug 1890; *d* South Nutfield, Surrey, 8 June 1959). English violinist, sister of BEATRICE HARRISON. She studied at the RCM with Arbos and Rivarde and made her London début in 1904. In 1909 she went for further study with Auer in St Petersburg. She toured extensively as a soloist and when only 18 replaced Kreisler at a festival in Helsinki. She made her début with the Berlin PO the following year. She appeared frequently with her two sisters, and she and Beatrice gave the première of the Delius Double Concerto which was dedicated to them. Delius also dedicated his Violin Sonata no.3 to May, and she gave the première in 1930 with Bax.

Her youngest sister, Margaret (*b* Chatham, 20 April 1899; *d* Greenock, 24 Dec 1995), was also a violinist, and active as a soloist during the 1920s. She made her Proms début in 1925, and also assisted her sisters in the editing of the Delius Double Concerto. In later years she devoted herself mainly to the piano.

MARGARET CAMPBELL

**Harrison, Samuel** (*b* Belper or Duffield, Derbys., 8 Sept 1760; *d* London, 25 June 1812). English tenor and impresario. As a boy soprano he was discovered in Derbyshire by William Burton (William Savage's deputy at St Paul's Cathedral and the Chapel Royal); Burton brought him to London as his apprentice about 1775, sending him to R.J.S. Stevens for singing lessons. Harrison made his London début in the masque *The Sirens* at Covent Garden (26 February 1776). From December 1776 he sang at the Society of Sacred Music Concerts and the Ancient Concerts; his voice did not break until 1778, when he was to have sung at the Gloucester Music Meeting. Sir William Parsons instructed him as a tenor and during this time Harrison supported himself by teaching the harpsichord; three years later he performed at the Gloucester Festival, and thereafter sang regularly at major festivals and concerts throughout the country.

The remaking of his voice in three years was a triumph of perseverance. 'The voice was at once the weakest and most pure and equal ever heard in England', remarked *The Harmonicon* in 1830. His intonation was perfect and his shake well-judged, but his compass was by no means extensive, covering only two octaves from A to a′, and his singing lacked animation. Aware of these limitations, Harrison specialized in cantabile arias of serenity and repose. His 'chaste style' was considered perfect for sacred music; in Kelly's words, his voice 'breathed pure religion'.

Harrison established his reputation at the Hanover Square concerts in the 1780s and at the Handel Commemoration of 1784 when his brother James also sang. He served as principal tenor and director of the Covent Garden oratorios, 1789–92, and sang at the Ancient Concerts from 1785 to 1791. In 1792 Harrison and Charles Knyvett founded the Vocal Concerts at Willis's Rooms: printed programmes and wordbooks (at *GB-Lgc*) indicate that English vocal solos, glees and catches were presented at these concerts, with an occasional Italian aria or instrumental work. The Vocal Concerts were suspended in 1795, but, with William Knyvett, James Bartleman and Thomas Greatorex, Harrison revived them in 1801; they ran until 1821.

In 1786 Harrison embarked on a brief but much-publicized affair with the soprano Mme Mara. On 6 December 1790 he married the soprano Ann Cantelo, with whom he had often sung. At his death he left an estate valued at £3500.

MOLLIE SANDS/RACHEL E. COWGILL

**Harrison** [née Riley], **Susie** [Susan] **Frances** [King, G(ilbert) R.] (*b* Toronto, 24 February 1859; *d* Toronto, 5 May 1935). Canadian composer and writer. Trained at private schools in Toronto and Montreal, Harrison used the pseudonym 'Medusa' for her writings which began to appear in 1875. Later she frequently used the name 'Seranus' for both music and literary publications as well as 'Gilbert King' or 'G.R. King' for songs and piano music. In 1883 she wrote the words and arranged the music of the *Address of Welcome to Lord Lansdowne*. Her opera *Pipandor* was completed in 1884 but has not been performed. This work, the first opera written by a Canadian woman, incorporates French-Canadian folktunes, a genre on which the composer frequently lectured. In addition to her work as a composer Harrison edited the first anthology of Canadian English, French and Amerindian verse (*The Canadian Birthday Book*, Toronto, 1887). Her own prose and poetry were published by *Pall Mall Magazine* and *New England Magazine* among others. For 20 years she served as principal of the Rosedale Branch of the Toronto Conservatory (?1902–22), edited *The Conservatory (Bi-)Monthly* (1902–13) and was a frequent contributor to *The Conservatory Quarterly Review* (1918–35).

Harrison's compositions frequently have a juxtaposition of modal melodies and harmonies with some chromatic progression. In the one-movement Quartet on Ancient Irish Airs Harrison skilfully explores the lyricism of Irish folksong while introducing rapid figurations typical of Irish reels in all four instrumental parts.

WORKS

Principal publishers: I. Suckling, King & Co., Nordheimer

ELAINE KEILLOR

**Harrison, William** (*b* London, 15 June 1813; *d* London, 9 Nov 1868). English tenor and impresario. He appeared in public as an amateur in 1836 and in October of that year he became a student at the RAM. After appearances at the Sacred Harmonic Society he made his operatic début at Covent Garden on 2 May 1839 in the première of Rooke's *Henrique*. During Bunn's seasons at Drury Lane in the 1840s he sang the leading tenor roles in the first performances of Balfe's *The Bohemian Girl*, Wallace's *Maritana* and Benedict's *Brides of Venice*, among others. He was particularly known for his renditions of operatic ballads. After further appearances at the Haymarket Theatre, he went on an American concert tour in 1854 with the soprano Louisa Pyne, her sister Susannah and the baritone Borriani.

On his return to England, in collaboration with Louisa Pyne, he established the Pyne-Harrison English Opera Company which opened at the Lyceum Theatre in 1857, then transferred to Drury Lane, and finally, from December 1858 until March 1864, appeared at Covent Garden. During that period 15 new British operas, including six

by Balfe, were produced, as well as English versions of Italian and French operas. During its eight seasons the company was reported to have spent some £200,000 in salaries, authors' fees and copyright. In the winter of 1864 Harrison opened Her Majesty's Theatre for a further season of opera in English, but with little success.

By the early 1860s Harrison had been superseded as a tenor by Sims Reeves and his voice was failing, reflected in the limitation of his role in Benedict's *The Lily of Killarney* (1862) and other operas of this period. Thomas Hardy, a regular opera-goer, recollected that 'Harrison's courage in singing his favourite parts, even when his voice had failed, might probably cause him to be remembered longer than his greatest success'.

W.H. HUSK/HAROLD ROSENTHAL/GEORGE BIDDLECOMBE

**Harrison & Harrison.** English firm of organ builders. It was founded in Rochdale in 1861 by Thomas Hugh Harrison (*b* London, 27 Dec 1839; *d* Isleworth, 24 March 1912), whose father, another Thomas (*c*1807–93), had set up in business as an organ parts supplier in the New Road, London, in 1830. The son served an apprenticeship with Henry Willis, and then went north to exploit the demand for organs created by the building of churches and chapels in the industrial districts. He may have acquired Richard Nicholson's business when the latter moved away from Rochdale in 1861 (*see* NICHOLSON). In 1870 he moved to Durham. His brother James (who had also been apprenticed to Willis) joined him in 1872 and the firm became Harrison & Harrison. The organs of this period are well-built, of good materials, and already reveal the concern for tonal refinement, and taste for smooth reeds, solid Pedal Organs and variety of string tone which were to become characteristic of the firm's work after *c*1900. Significant commissions included St Michael's College, Tenbury (1869), St James, Morpeth (1870), St Martin's, Scarborough (1872), and St Giles's Cathedral, Edinburgh (1878, 1884).

In 1893 Harrison took his son, Arthur Harrison (*b* Rochdale, 1868; *d* London, 14 Nov 1936) into partnership; the second son, Henry Shaw (Harry) Harrison (*b* 1871; *d* Durham, 6 July 1957) was made a partner in 1897. Broadly, Arthur became responsible for tonal matters, Harry for technical ones. Their father retained a 50% share in the business until his retirement sometime after 1895.

The firm then took a new direction, influenced by George Dixon (1870–1950), an amateur of independent means, who was convinced that Hope-Jones's notions about tonal design were wrong-headed. Dixon's views were influenced by those of THOMAS CASSON, who advocated the use of extension and borrowing on the Pedal, the enclosure of the Pedal and the use of the complete harmonic series including the flat 21st. All these features appeared in Arthur Harrison's work. Dixon also admired the comprehensive flue choruses provided by Edmund Schulze and T.C. Lewis; the complete Great choruses in Harrison & Harrison's largest instruments (from 32′ to two mixtures) reflect this, although their use of relatively high wind pressures, deep nicking and leathered lips creates an altogether different effect. The reeds owe more to Willis (another of Dixon's models) although, again, the finished effect of Arthur Harrison's trombas is very different from Willis's brilliant chorus reeds.

Arthur had his own, pronounced views: it is impossible to be certain where Dixon's influence began and ended. He was also surrounded by a resourceful team of craftsmen, including his brother Harry, who designed the consoles and the firm's famously reliable tubular- and electro-pneumatic actions, and the reed voicer W.C. Jones (1874–1967). Together they developed a distinctively English Romantic organ, notable for its variety of semi-orchestral voices, its dynamic range and seamless 'build up'.

The series began with the organ of St Nicholas, Whitehaven (1904), a 47-stop, 3-manual instrument in which Great and Choir were amalgamated, and the third division was a 'Solo and Tuba Organ'. Schemes for Durham (1905) and Ely (1908) revealed a new approach to cathedral organ design, with choruses of strings on the Solo Organs, a generous provision of Pedal basses, heavy-pressure chorus reeds, and (at Ely) a massive Great flue chorus including the Harmonics (10.17.19.21.22). A succession of distinguished instruments followed, among them those for All Saints, Margaret Street, London (1911), St Mary Redcliffe, Bristol (1912), and the Caird Hall, Dundee (1923), the rebuilt Willis organ in the Royal Albert Hall, London (1924–33), and those for Newcastle City Hall (1929), Repton School Chapel (1930), King's College, Cambridge (1934), and Westminster Abbey (1937).

Arthur Harrison's death, while working on the Westminster Abbey organ, was soon followed by the outbreak of war, and the firm did little major work until the era of post-war reconstruction. By then, Harry Harrison's son, Cuthbert Harrison (1905–91), had become managing director. In 1950, the firm received the order for the new organ in the Royal Festival Hall (for illustration *see* ORGAN, §VII, 6, fig.48), designed (and meticulously supervised) by Ralph Downes. The scheme appeared superficially to be the antithesis of all that the pre-war Harrison tradition represented. It was a bold neo-classical scheme, powerfully influenced by similar schemes in the USA, yet displaying many of its designer's own quirks. It was to prove one of the most influential organs of the 20th century and it is generally agreed that the organ builders acquitted themselves in an exemplary manner (for a different viewpoint *see* ORGAN §VII, 6). Although they continued to build organs of a largely Romantic type (Colston Hall, Bristol, 1956) the firm applied the lessons learned at the Royal Festival Hall to most of its subsequent work, and soon developed a style which blended elements of neo-classicism (low pressures, open-foot voicing, complete choruses, solo mutations) with more familiar English features (swell boxes, powerful reed choruses, strings, weighty Pedal basses). The action was almost invariably electro-pneumatic, built to the firm's exacting standards, and permitting a full range of console accessories. Instruments of this type included: All Hallows,

Barking-by-the-Tower, London (1957), St Clement Danes, London (1958), St Albans and Coventry Cathedrals (1962), Fairfield Hall, Croydon (1964), St George's Chapel, Windsor (1965), University of Cincinnati (1967), Christ Church, Savannah, Georgia, USA (1972).

Mark Venning (*b* 6 Sept 1942) succeeded Cuthbert Harrison as managing director in 1975. Since then the firm has tended to return to a more traditional style of voicing (still with low pressures and complete choruses, but less assertive than the voicing produced by open-foot methods) and mechanical action organs have begun to appear regularly (Merchant Taylors School, Moor Park, 1981; All Saints, West Ham, 1986; All Saints, Leighton Buzzard, 1989). A more conservative approach has been adopted in the reconstruction of existing instruments (Peterborough Cathedral, 1981; Westminster Cathedral, 1984; Winchester Cathedral, 1988; Southwark Cathedral, 1991) and a number of important restorations have been undertaken, not least of instruments built by the firm earlier in the century (e.g. Caird Hall, Dundee, 1991).

NICHOLAS THISTLETHWAITE

**Harriss, Charles (Albert Edwin)** (*b* London, midnight 16–17 Dec 1862; *d* Ottawa, 31 July 1929). Canadian composer, impresario and organist of English birth. Harriss studied at St Michael's College, Tenbury Wells, and on Ouseley's recommendation became organist in Ottawa in 1882. He occupied similar positions in Montreal from 1883 to 1894, when his interests had shifted to composition and touring as a concert organist. From around 1898 he lived in Ottawa, even though he founded and directed the McGill Conservatorium in Montreal from 1904 to 1907. His marriage to a wealthy widow in 1897 enabled him to organize music festivals, concert and lecture tours and gala performances in Canada and other parts of the British Empire, and to have nearly all of his compositions published. His opera *Torquil: a Scandinavian Dramatic Legend* was first performed in Toronto on 22 May 1900; the music shows mainly German Romantic influences. In 1905 he received the Lambeth DMus. His ideal was to stimulate 'music, commerce and patriotism' throughout the empire. (*EMC*2, N. Turbide)

WORKS
(*selective list*)

Daniel before the King (cant.), 1890; Torquil (op), 1896; Festival Mass, 1901; The Admiral (operetta), 1902; Coronation Mass: Edward VII, 1903; Pan (cant.), 1904; The Sands of Dee (cant.), 1906; The Crowning of the King (cant.), 1911

HELMUT KALLMANN

**Harrisson, Thomas.** *See* HARRIS family.

**Harrogate.** District in Yorkshire (since 1974). It comprises the ancient city of Ripon, Harrogate – famous as a spa town in the 18th century – and a number of villages. The musical reputation of the area relied at first on the choral foundation of the ancient minster of Ripon, but has been much enhanced by the Harrogate Festival established in 1966.

It is likely that St Wilfrid (634–709), a native of Ripon, founded a choir school there, but the first documented references to music in the minster (a diocesan cathedral since 1836) belong to the Fabric Rolls of 1399, where the use of organs was mentioned. The names of organists and their emoluments in the 15th and 16th centuries are recorded. A later medieval manuscript (*GB-Lbl* Add.50856) from the Ripon minster library, devoted to the life of a saint, contains the words and melody of *A ballet of ye death of Everyman* and other fragments of vernacular songs without music. The choral foundation as re-established in the early 17th century allowed for two vicars-choral, six 'singing-men', six choristers and an organist. E.J. Crow, organist from 1873 to 1902, conducted the Cathedral Festival Choir and the Ripon Orchestral Society. His successor, C.H. Moody, was conspicuous for his efforts after World War II to maintain the existence of a choir school and a daily sung service. The first church in Harrogate to be provided with an organ was Christ Church, where an instrument of two manuals, with 'German' pedals (1½ octaves), was installed in 1834. This was built by Francis Booth of Wakefield, rebuilt in about 1906 by Hill, Norman & Beard, and by John Jackson in 1985.

By the mid-18th century concerts were being given in the playhouses of Harrogate. During the 19th century music became a principal amenity of a health resort with a rapidly growing reputation: recitals, military band performances and orchestral concerts proliferated. Military band music was particularly favoured in the Victorian era and players, paid £1 a week, were often expected to play four times daily, the first appearance being at 7.30 a.m. Among the many resident orchestral conductors in Harrogate the most important were Julian Clifford, who attempted to form a Yorkshire Permanent Orchestra based in Harrogate, and Basil Cameron, whose concerts in the Royal Hall in 1925 were notably successful artistically and financially. In the early part of the 20th century the Harrogate Municipal Orchestra came into being.

Amateur music has flourished for many years and the Harrogate, Ripon City, Knaresborough and Haworth Brass or Silver Bands testify to the strength of the most famous indigenous amateur tradition. Other music organizations there are the Harrogate Chamber Orchestra, String Orchestra, Music Club and Concert Society.

A festival was inaugurated in Harrogate in 1927, but it was not until 1966 that it was possible to make such an undertaking relatively secure through local authority support. Some performances are given in churches and in Ripon Cathedral. The festival organizers have commissioned new works from Leonard Salzedo, Norman Kay, Wilfred Josephs and Dominic Muldowney, and, in cooperation with the music department of York University, has provided a forum for the performance and discussion of contemporary music.

**Harrop, Sarah.** *See* BATES, SARAH.

**Harry Fox Agency.** *See* COPYRIGHT, §V, 14(iv).

**Harsányi, Tibor** (*b* Magyarkanisza, 27 June 1898; *d* Paris, 19 Sept 1954). French composer, conductor and pianist of Hungarian birth. He received guidance from Bartók, but owed his technical training to Kodály, with whom he studied at the National Hungarian Royal Academy of Music. He made concert tours of Europe and the Pacific, before settling first in the Netherlands and then, in 1924, in Paris. Harsányi referred to Paris as a 'grand laboratory of contemporary music'. There he helped to found the Société Triton, which organized concerts of contemporary music, and established ties with other expatriates, becoming one of the so-called Groupe des Quatre (along with Martinů, Mihalovici and Beck). He was also associated with the Ecole de Paris, which included Tansman and Rosenthal and was promoted under that name by the publisher Dillard of La Sirène Musicale.

Harsányi's harmonic language embraced highly dissonant chromatic as well as diatonic writing, and the superimposition of functionally unrelated chords (as in *Pièce* for two pianos). His early works were imbued with the folksong tradition of Bartók: while his music always retained this distinctive Hungarian flavour, he came to value folksong chiefly for its local colour, rather than as an expression of national identity. The rhythmic vitality of works such as the Suite for orchestra remained a distinctive feature of his style: in the piano pieces Fox-Trot, Blues and Valse (*Trois pièces de danse*), the skilful rhythmic manipulations demonstrate Harsányi's receptiveness to the influence of jazz, which he regarded as a means of reintegrating music into everyday life. In response to Parisian neoclassicism he developed a more austere contrapuntal idiom, often with the use of reduced instrumental forces: examples of this leaner style include two works given at ISCM Festivals, the Divertimento no.2 (performed at the 1946 Festival in London) and the Nonet (Vienna, 1932). Of his dramatic work, the *opéra-bouffe Les invités* was performed with great success in Paris in 1937, the radio opera *Illusions* won the 1948 Italia Prize, and *L'histoire de petit tailleur* was written to accompany a puppet show. His Viola Sonata, commissioned by French Radio, was performed posthumously by the Société Nationale in 1955.

WORKS
(*selective list*)

Dramatic: Le dernier songe (ballet), 1920; Les invités (op, 1, J.-V. Pellerin), 1928; Les pantins (ballet), 1938; L'histoire du petit tailleur (puppet show, after J.L. and W.C. Grimm), reciter, 7 insts, perc, 1939; Chota Roustaveli (ballet, 3, S. Lifar), 1945, collab. Honegger and Tcherepnin; La tragédie de l'homme (music theatre), 1946; Illusions, ou L'histoire d'un miracle (radio op, 2, P. Brive after E.T.A. Hoffmann), 1948; Les amants de Budapest (music theatre), 1950; L'amour et la vie (ballet), 1950; La fleur verte (ballet), 1950; La ville du fond de la mer (music theatre), 1950; La joie est juste (music theatre), 1951; Echec au génie (music theatre), 1952; Légende canadienne (ballet) (1953); Les fourmis rouges (music theatre), 1954

Orch: 3 morceaux, 1926; Suite, 1927; Sym. Ov., 1928; Aria, cadence et rondo, vc, orch, 1930; Concertstück, pf, orch, 1930; Suite hongroise, 1935; Divertimento no.1, 2 vn, chbr orch, 1941; Vn Conc., 1941; Divertimento no.2, tpt, str, 1943; Danses variées, 1945; Figures et rythmes, 1945; Divertissement français, 1946; Rapsodie burlesque, 1948; Sym., C, 1952

Vocal: 6 poèmes de Heine, 1v, pf, 1923; 2 scènes dramatiques, B, orch, 1923; Parfums rustiques, 1924; Chansons (A. de Musset), 1925; 3 pèlerins (R.-E. Hart), 1925; 5 poèmes (Hart), 1v, pf, 1927; Vocalise-étude 'Blues', 1930; Cantate de Noël, 4vv, fl, str orch, 1939; 5 chants nostalgiques (G. Apollinaire, J. Moréas, S. Mallarmé, G. de Nerval, P. Verlaine), 1943; 2 fantaisies, chorus, 1943; 3 chansons du Vivarais, 4 solo vv, 5 insts, 1946; Colère, a cappella, 1952

Chbr: Sonatine, vn, pf, 1918; 3 pièces, fl, pf, 1924; Str Qt no.1, 1925; Duo, vn, vc, 1926; Pf Trio, 1926; 3 pièces, vn, pf, 1926; Sonata, vn, pf, 1926; Nonette, wind qnt, str qt, 1927; Sonata, vc, pf, 1928; Concertino, pf, str qt, 1931; Str Trio, 1934; Str Qt no.2 1935; Rapsodie, vc, pf, 1938; Lecture à vue, perc, 1951; Petites pièces pour ensemble tzigane, 1953; Sonata, va, pf, 1954

Pf: Petite suite pour enfants, 1923; 4 morceaux, 1924; Rapsodie, 1924; La semaine, 1924; Novellette, 1925; Petite suite de danses, 1926; Sonate, pf, 1926; 2 burlesques, 1927; 12 petites pièces, 1927; Pièce, 2 pf, 1927; 6 pièces courtes, 1927; 3 pièces de danse, 1928; 5 préludes brefs, 1928; Fox-Trot, 1929, in 13 Danses (1929), collab. Ecole de Paris; Rythmes: 5 inventions, 1929; Bagatelles, 1930, Suite, 1930; Suite brève, 1930; 5 études rythmiques, *c*1933; Baby Dancing, 1934; Pastorales, 1934; Le tourbillon mécanique, 1937, in Parc d'attractions (1938), collab. Honegger, Martinů, Tansman and others; 3 pièces lyriques, pf

Film scores: La joie de vivre, 1933; Miarka, collab. A. Honegger, 1938; Ballade atomique, 1948; La tour de Babel, 1950; Tabac de Cairo, 1952

Principal publishers: Eschig, Heugel, La Sirène, Salabert, Senart

ARTHUR HOÉRÉE/BARBARA L. KELLY

**Harsdörffer** [Harsdörfer], **Georg Philipp** (*b* Nuremberg, 1 Nov 1607; *d* Nuremberg, ?22 Sept 1658). German poet and librettist. Having received a broad classical education at home and at the universities at Nuremberg and Strasbourg, Harsdörffer embarked on a European journey that took him from England to Italy. He settled finally in his native city in 1634, where he held several positions as assessor. He belonged to a patrician family, married a senator's daughter and in 1655 was elected to Nuremberg city council.

Harsdörffer campaigned strongly for the purification of the German language. In 1644 he helped to found the Pegnesischer Blumenorden, a society of intellectuals and artists that met regularly in Nuremberg and was modelled on humanist societies in Renaissance Italy and on the German academy the Fruchtbringende Gesellschaft. An amateur poet who published a large number of literary and moralistic works, he provided poetry for the society which he collected in his musically most important work, the *Frauenzimmer Gesprächspiele*. The eight volumes

contain various literary works and texts for music, which entertained his friends and showed off his erudition; several are translations or imitations of various types of foreign works with which he became acquainted on his travels. The most important are the texts of the oldest surviving German opera, *Seelewig* (iv, 489), and the moralistic musical pageant *Tugendsterne* (v, 280), both set to music by Sigmund Theophil Staden. Other music in the collection includes four strophic songs each dedicated to a season (ii, 277), a ballet (ii, 300) and incidental music to plays (ii, 401, and vii, 431). In *Tugendsterne* Harsdörffer, as a Neoplatonist, considered music not only as *musica mundana* but also as *musica humana*, a reflection of the four elements of humankind and of the physical world. A soprano reflects the spirit of life and the element fire; an alto, blood and air; a tenor, flesh and water; and a bass, bones and earth. Music is also a foretaste of the eternal life.

JOHN H. BARON

**Harshaw, Margaret** (*b* Philadelphia, 12 May 1909). American mezzo-soprano, later soprano. She studied at the Juilliard School with Anna Schoen-René. After winning the Metropolitan Opera Auditions of the Air in 1942, she made her Metropolitan début as the Second Norn in *Götterdämmerung* and in subsequent seasons sang such roles as Azucena, Amneris and Mistress Quickly. At San Francisco (1944–7) her roles included Ulrica, Brangäne and Debussy's Geneviève. During the 1950–51 season she changed to soprano parts, succeeding Helen Traubel in the heroic Wagnerian repertory (Isolde, Senta, Kundry and Brünnhilde), and remaining with the Metropolitan until the close of the 1963–4 season. During this period she also fulfilled engagements at Covent Garden (1953–6), where she excelled as Brünnhilde in Kenipe's *Ring* cycles, Glyndebourne (appearing as Donna Anna in 1954) and elsewhere. She was a convincing actress and possessed a good, though by no means great, Wagnerian voice; her tone was evenly produced over a wide range. She later taught at Bloomington, Indiana, and became one of the finest singing teachers in the USA.

MAX DE SCHAUENSEE/R

**Harst, Coelestin** (*b* Sélestat, Alsace, 1698; *d* nr Gerberschweier, 1776). Alsatian priest and musician. After preliminary studies in Sélestat he entered the Benedictine convent of Ebersmünster, where he became master of the novices, teacher, and in 1745 prior, at the same time acquiring sufficient reputation as a harpsichordist to play before Louis XV during the king's visit to Strasbourg in 1744. His knowledge of the organ led to invitations to examine new instruments. As a superior he insisted upon strict adherence to the rule of his order, but he could also be amusing and entertaining. At his death he was provost of the convent of St Marx near Gerberschweier.

Harst's only known work is his *Recueil de différentes pièces de clavecin* (Paris, 1745/*R*). He was one of the very few composers to use Couperin's term *ordre* for a group of pieces in the same key, and his style is an amalgam of Couperin, Rameau and Dandrieu. Perhaps out of ecclesiastical delicacy, the usual feminine titles yield to sturdy military ones: *Le colonel*, *Le grenadier*, *L'hussar*. *Le grand amusement* is a pale imitation of Rameau's brilliant *Les niais de Sologne*.

DAVID FULLER/BRUCE GUSTAFSON

**Hart.** English family of violin makers and dealers. John Thomas Hart (*b* 17 Dec 1805; *d* 1 Jan 1874) was first a pupil of Samuel Gilkes, and opened his own business in Princes Street, London, about 1825. He was primarily known as a connoisseur of early Italian instruments, and his dealing activities included the formation of such well-known collections as those of Goding, Plowden, Gillott and Adam. George Hart (i) (*b* London, 23 March 1839; *d* nr Newhaven, 25 April 1891) continued his father's business, which became Hart & Son. His interest extended to the historical and literary side of the violin, and he is chiefly known for his excellent book *The Violin: its Famous Makers and their Imitators*, published in 1875 with several later editions. It was followed by *The Violin and its Music* in 1881. He was succeeded at 28 Wardour Street by his sons George Hart (ii) (*b* nr Warwick, 4 Jan 1860; *d c*1931–2) and Herbert Hart (*b* London, 1883; *d* 20 Oct 1953). In the early 1890s the Harts expanded to include trade in new instruments. Some of these were made for them in France, but others were the work of the Voller brothers, who made some excellent copies of celebrated violins that passed through the Hart shop. Bows were also imported from abroad and branded with the firm's name. Although overshadowed by the Hills, the good reputation of the firm continued and it handled many fine instruments and bows. It closed down with the retirement of Herbert Hart in the autumn of 1939.

CHARLES BEARE

**Hart, Andro** (*d* Edinburgh, Dec 1621). Scottish bookseller and printer. By 1589 he was an importer of foreign books; in 1601 his name appeared in a psalm book printed in Dordrecht, the Netherlands, to be sold in Scotland. In 1610 he became a publisher in Edinburgh, issuing a famous folio Bible in that year and many psalters (with the melodies), as well as books of Scottish court poetry, mathematics and theology. One of the most interesting of the psalters is that of 1615 in which, for the first time, the 12 Common Tunes were printed as a group and given distinctive titles.

After Hart's death, his widow (*d* Edinburgh, 3 May 1642) published more psalm books with the imprint 'the Heires of Andro Hart'. Among these is the most important 17th-century Scottish church music publication, the 1635 psalter, which contains 143 psalm settings, nearly all by Scottish composers: 104 of Proper Tunes, 31 of Common Tunes and 8 imitative settings 'in reports'.

DAVID JOHNSON/KENNETH ELLIOTT

**Hart, Fritz (Bennicke)** (*b* London, 11 Feb 1874; *d* Honolulu, 9 July 1949). English composer and conductor. From the age of 10 to 13 he was a chorister at Westminster Abbey under Frederick Bridge. Stanford was a formative influence during his years at the RCM (1893–6) although he did not study composition. His close friends there included Holst, Coleridge-Taylor and, later, Vaughan Williams and Ireland. Hart began his career as a theatre conductor and was musical director for several touring companies before moving to Australia in 1909 on a conducting engagement under the management of J.C. Williamson. By 1913 he was lecturing at the Albert Street Conservatorium of Music in Melbourne, and with Alfred Hill founded the visionary but short-lived Australian Opera League. In 1914 he became director of the Conservatorium succeeding its founder, George Marshall-Hall. His staunch supporter, Nellie Melba, founded a school of singing there shortly after. The voices attracted to the Conservatorium and its opera school were a potent stimulus to his creative talents.

Hart's extraordinary energy and enthusiasm is evidenced by a prodigious compositional output, and more than half of his over 500 songs, almost all of his choral works, and 18 of his 22 operas were composed during his time in Melbourne. These works demonstrate the hallmarks of his style: a keen sense of the dramatic moment and close attention to text declamation, combined with a melodic fluency born of English folksong. Hart made 127 settings of Robert Herrick, capturing the intensity of the verse without compromising lyricism. He was also strongly attracted to the literature of the Celtic Revival, setting poetry of George William Russell ('A.E.'), Fiona Macleod and Joseph Campbell, and taking plays of Yeats, Synge and Lady Gregory as librettos for his operas. He also wrote librettos that were similarly inspired by Celtic mythology and folklore.

Highly respected as a teacher and composer, Hart was made a fellow of the RCM in 1924, but he made his most public impact on the musical life of Melbourne as a conductor, giving Australian premières of several Gluck and Mozart operas. He was appointed permanent conductor of the Melbourne SO from 1928 (later joint appointment with Bernard Heinze). From 1931 he was a regular guest conductor of the Honolulu SO, and in 1937 he moved permanently to Honolulu to become both the permanent conductor of the orchestra and the first professor of music at the University of Hawaii. He continued to compose songs and another four operas, but abandoned choral composition, which had been a feature of his close association with the conservatorium choir in Melbourne. Reflecting the orchestral orientation of his new post in Hawaii, he renewed his interest in the composition of symphonic and chamber instrumental works. Finding composition difficult during World War II, he pursued other creative outlets which included writing 24 unpublished novels.

WORKS
(*selective list*)

STAGE WORKS

MP – *Melbourne, Playhouse*

Pierrette (comic op, 1, Hart), op.13, 1913, Sydney, Repertory, 3 Aug 1914
Malvolio (comic op, 3, after W. Shakespeare: *Twelfth Night*), op.14, 1913, Act 1 only, MP, 5 Dec 1919
The Land of Heart's Desire (1, after W.B. Yeats), op.18, 1914
Riders to the Sea (1, after J.M. Synge) op.19, 1915, Cambridge, Mumford, 16 Oct 1997
Deirdre of the Sorrows (3, after Synge) op.21, 1916
Ruth and Naomi (7 scenes, Hart, after the Bible), op.24, 1917, MP, 7 July 1917
The Fantastics (romantic comic op, 3, after E. Rostand), op.35, 1918
The Travelling Man (1, after I.A. Gregory), op.41, 1920
The King (5 scenes, after S. Philips), op.43, 1921
Esther (2, Hart, after the Bible), op.57, 1923
The Woman who Laughed at Faery (fantastic comic op, 1, Hart), op.58, 1924, MP, 25 Sept 1929
Deirdre in Exile (1, Hart), op.66, 1926, MP, 22 Sept 1926
The Forced Marriage (4, after Molière), op.79, 1928
St George and the Dragon (1, after Cornish mummers' play), op.99, 1930, Melbourne, St Kevin's Hall, 10 July 1931
The Nativity (prol., 3 scenes, Medieval sources), op.105, 1931
The Dead Heat (1, operetta, Hart), 1931
Algernon Simpson (The Fiancées) (1, operetta, Hart), 1931
Isolt of the White Hands (4, after E.A. Robinson), op.106, 1933
St Francis (1, Hart), op.117, 1937
Even unto Bethlehem (Christmas op, 4 scenes, Hart), op.155, 1943, Honolulu, Academy of Arts, 20 Dec 1943
The Swineherd, the Toad and the Princess (4, operetta, Hart), op.156, 1944
The Vengeance of Faery (5, Hart), op.164, 1949

SONGS
*with piano*

7 Songs (W. Blake), op.9, 1912; 14 Songs (R. Herrick), op.10, 1912; 7 Songs (W.E. Henley), op.11, 1912; 6 songs (L. Esson), op.12, 1912; 7 Songs (Blake), op.15, 1913; 7 Songs (Henley), op.16, 1913; 5 Songs (R. Church), op.17, 1913; 21 Songs (Herrick), op.23, 1916; 7 Songs (Blake), op.25, 1917; 7 Songs (Henley), op.26, 1917; 49 Songs (G.W. Russell), opp.28–34, 1918; 5 Songs (F. Macleod), op.36, 1919; The Gilly of Christ (song cycle, 13

songs, J. Campbell), op.49, 1922; 25 Songs (Herrick), opp.50–54, 1922; 25 Songs (W. Sharp), opp.67–71, 1926; 30 Songs (Macleod), opp.72–7, 1927; 3 Songs (W. Morris), op.81, 1930; 36 Songs (Herrick), opp.82–90, 1930

A.-M. FORBES

**Hart, James** (*b* 1647; *d* 8 May 1718). English bass and composer. He was described as 'a base from Yorke' when he was sworn in a Gentleman of the Chapel Royal in 1670. He was listed as one of the 'Priests of the Chapel' in 1692, so he may have taken orders in the meantime. He and Jeffrey Banister kept a boarding-school for young ladies 'in that House which was formerly Sir Arthur Gorges at Chelsea'. It was here that Duffet's masque *Beauty's Triumph* was put on in 1676. He probably took part as a singer in Shadwell's version of *The Tempest* (1674), and sang the parts of Europe and Strephon in Crowne's masque *Calisto*, performed at court in 1675. Later in his career he was one of the soloists in Purcell's *Hail! Bright Cecilia* (1692). More than 60 of his songs were printed in late 17th-century songbooks, chiefly *Choice Ayres and Songs* (RISM, 1673[3]–1684[3]/*R*1989 in MLE, A5), *The Theater of Music* (1685[5], 1686[3]–1687[5]), *Comes amoris* (1687[4]–1688[8], 1694[5]), *The Banquet of Musick* (1688[6]–1690[5]/*R*1983 in MLE, A1) and *Synopsis Musical* (1693). Manuscripts containing songs by Hart include *GB-Lbl* Add.MS 19759. His *Adieu to the pleasures and follies of love* was sung in *The Tempest* though never incorporated into the text of the opera. He is one of the more interesting song composers contemporary with Purcell and by no means lacking in originality.

**Hart, Johann Daniel.** *See* HARDT, JOHANN DANIEL.

**Hart, Lorenz (Milton)** (*b* New York, 2 May 1895; *d* New York, 22 Nov 1943). American lyricist and librettist. He studied journalism at Columbia University, where he met RICHARD RODGERS. They began writing material for student shows together, and achieved an early success on Broadway when their song 'Any Old Place with You' was interpolated in *A Lonely Romeo* (1919). Hart left Columbia to translate plays for the Shubert brothers, but continued to collaborate with Rodgers, writing the score for *Poor Little Ritz Girl* (1920). The team did not receive widespread recognition until 1925, however, when their songs for the *Garrick Gaieties* helped make that show a hit. Thereafter the two men compiled a remarkable record of successes and some interesting failures both on Broadway and in Hollywood. In his last years Hart's alcoholism proved a problem, though his skill as a lyricist was not impaired.

Hart's lyrics are distinguished for their brilliant use of inner and multisyllabic rhymes (he had confessed a violent dislike of the 'monosyllabic juxtaposition of "slush" and "mush"' that characterized so many contemporary lyrics). He also wrote consistently in a superficially lighthearted but fundamentally misanthropic style.

WORKS

STAGE

*unless otherwise stated, all are musicals and all dates are those of first New York performance; all lyrics are by Hart and all music by Rodgers*

* – Hart co-librettist

Poor Little Ritz Girl (G. Campbell and L. Fields), 28 July 1920

The Melody Man* (play, with some music, H. Fields and Rodgers), 13 May 1924; film, 1930

Garrick Gaieties (revue), 17 May 1925 [incl. Manhattan]

Dearest Enemy (H. Fields), 18 Sept 1925 [incl. Bye and Bye, Here in my Arms]

The Girl Friend (H. Fields), 17 March 1926 [incl. The Blue Room, The Girl Friend]

Garrick Gaieties (revue), 10 May 1926 [incl. Mountain Greenery]

Lido Lady (G. Bolton, B. Kalmar, H. Ruby and R. Jeans), London, 1 Dec 1926

Peggy-Ann (H. Fields), 27 Dec 1926

Betsy (I. Caesar, D. Freedman and W.A. McGuire), 28 Dec 1926

One Dam Thing After Another (revue, Jeans), London, 19 May 1927

A Connecticut Yankee (H. Fields), 3 Nov 1927 [incl. My heart stood still, Thou Swell]

She's my Baby (Bolton, Kalmar and Ruby), 3 Jan 1928

Present Arms (H. Fields), 26 April 1928; film, as Leathernecking, 1930

Chee-Chee (H. Fields), 25 Sept 1928

Spring is Here (O. Davis), 11 March 1929 [incl. With a Song in my Heart]; film, 1930

Heads Up! (J. McGowan and P.G. Smith), 11 Nov 1929; film, 1930

Simple Simon (E. Wynn and Bolton), 18 Feb 1930 [incl. Ten Cents a Dance]

Evergreen (B.W. Levy), London, 3 Dec 1930 [incl. Dancing on the Ceiling]; film, 1934

America's Sweetheart (H. Fields), 10 Feb 1931 [incl. I've got five dollars]
Jumbo (B. Hecht and C. MacArthur), 16 Nov 1935 [incl. Little Girl Blue, The Most Beautiful Girl in the World, My Romance]; film, 1962
On your Toes* (Rodgers and G. Abbott), 11 April 1936 [incl. There's a small hotel]; film, 1939
Babes in Arms* (Rodgers), 14 April 1937 [incl. I wish I were in love again, Johnny One Note, The lady is a tramp, My Funny Valentine, Where or When]; film, 1939
I'd Rather be Right (G.S. Kaufman and M. Hart), 2 Nov 1937
I Married an Angel* (Rodgers and L. Hart), 11 May 1938 [incl. I married an angel, Spring is here]; film, 1942
The Boys from Syracuse (Abbott, after Shakespeare: *The Comedy of Errors*), 23 Nov 1938 [incl. Falling in Love with Love, This can't be love]; film, 1940
Too Many Girls (G. Marion jr), 18 Oct 1939 [incl. I didn't know what time it was]; film, 1940
Higher and Higher (G. Hurlbut and J. Logan), 4 April 1940 [incl. It never entered my mind]; film, 1943
Pal Joey (J. O'Hara), 25 Dec 1940 [incl. Bewitched]; film, 1957
By Jupiter* (Rodgers), 2 June 1942 [incl. Ev'rything I've Got]

FILM SCORES

The Hot Heiress, 1931; Love me Tonight, 1932 [incl. Mimi, Isn't it romantic?]; The Phantom President, 1932; Dancing Lady, 1933; Hallelujah, I'm a Bum, 1933; Hollywood Party, 1934; Manhattan Melodrama, 1934; Mississippi, 1935; Dancing Pirate, 1936; Fools for Scandal, 1938; They Met in Argentina, 1941

GERALD BORDMAN

**Hart, Philip** (*b* ?London, ?1674; *d* London, 17 July 1749). English composer and organist. His father, James Hart, a Gentleman of the Chapel Royal, went to London from York in 1670 at the age of 23 and Philip was probably born a few years later. A candidate for the organistship of St Bride, Fleet Street, in February 1693, he gained his first appointment as assistant to William Goodgroome at St Andrew Undershaft on 30 July 1696; from 19 October 1697 until his death he was sole organist there. He was also organist of St Michael Cornhill (1704–23) and St Dionis Backchurch (1724–49). Hawkins included the name of Hart among those who, 'some constantly, others frequently', performed at Thomas Britton's concerts in Clerkenwell. Hart's will of October 1747 is an autograph; the endorsement describes him as 'of the parish of St George the Martyr' at the time of his death, though it was at St Andrew Undershaft that he was buried on 22 July 1749.

Hawkins described Hart as 'a sound musician', who

> entertained little relish for those refinements in music which followed the introduction of the Italian opera into this country, for which reason he was the idol of the citizens, especially such of them as were old enough to remember Blow and Purcell.

A 'grave and decent man', he was 'remarkable for his affability and gentlemanly deportment'. He also enjoyed a considerable reputation as an organist, though Hawkins criticized him for using 'such a frequent iteration of the shake as destroyed the melody'. As a composer he was among those who brought distinction to English music between the death of Purcell and the arrival of Handel. It was during those years that his best music was composed. Hart's earliest known works are a number of keyboard pieces, in the National Library of Scotland, dating from 1695 or earlier; some were later published in revised versions in the *Fugues and Lessons* of 1704. His first songs and vocal duets celebrated the Peace of Ryswick (1697) and subsequent treaties. In the first decade of the 18th century his songs were in demand at Betterton's new theatre in Lincoln's Inn Fields; most of them are in the nature of sectional cantatas and their style is that of the age of Purcell, using a harmony spattered with expressive dissonance. Hart's masterpiece was the ode performed at Stationers' Hall on 3 March 1703, called *Ode to Harmony* in the manuscript score but *Ode in Praise of Musick* in John Hughes's printed poem. It was probably the official St Cecilia's Day Ode for 1702, publicly repeated (as was the custom) a few months later. Large forces are handled with great assurance in this major work, in which Hart proved himself a master of ground-bass technique (as in the anthem *Praise the Lord, ye servants*). In some later songs, and in his one other large work, *The Morning Hymn, from the Fifth Book of Milton's Paradise Lost* (a cycle of solo cantatas with cello obbligato and basso continuo), Hart made some attempt to come to terms with the broad-based diatonic style of the Handelian era.

WORKS

Edition: *Philip Hart: Four Fugues and a Lesson*, ed. F. Dawes (London, 1973) [D]

INSTRUMENTAL

19 short hpd pieces, *c*1695, *GB-En*
A Choice Sett of Lessons, hpd/spinet (London, 1702), lost
Fugues, org/hpd, with Lessons, hpd (London, 1704) [incl. 6 rev. items from 19 short pieces], 3 fugues ed. in D
Fugue in C, org, *c*1704, *Lbl*, D
Lesson in G, org, *Lbl*, D

VOCAL

Ode in Praise of Musick (Ode to Harmony), 1702, *GB-Lbl*
6 tunes in Melodies Proper to be Sung to any of the Versions of the Psalms of David, ed. Hart (London, 1716)
I will give thanks unto thee, O Lord, verse anthem, also attrib. William Norris, before 1718, *Lbl*
Praise the Lord, ye servants, verse anthem, before 1718, *Lbl*
The Morning Hymn, from the Fifth Book of Milton's Paradise Lost, 2vv, vc, bc (London, *c*1729)
12 single songs and 6 vocal duets, with bc (London, *c*1698–*c*1725)

**Härtel.** *See* BREITKOPF & HÄRTEL.

**Harter Einsatz** (Ger.). COUP DE GLOTTE.

**Harth, Sidney** (*b* Cleveland, OH, 5 Oct 1929). American violinist, conductor and teacher. He studied at the Cleveland Institute (1945–9), and with Piastro and Enescu (1949–51). After winning the Naumburg Award he made his New York début in 1949, his Paris début in 1952, and won second prize in the Wieniawski Competition in 1957.

In 1961 and 1966 he toured the USSR. He was leader and assistant conductor of the Louisville Orchestra (1953–9) and leader of the Chicago SO (1959–62). He also led the Casals Festival Orchestra in Puerto Rico from 1959 to 1965 and again in 1972. He was leader and associate conductor of the Los Angeles PO (1973–9), and music director of the Puerto Rico SO (1977–9). He has had a distinguished career as a teacher, serving on the faculties of the University of Louisville (1953–8), De Paul University, Chicago (1959–62), and as professor and music chairman at Carnegie-Mellon University in Pittsburgh (1963–73). In 1981 he was appointed orchestral director at Mannes College and professor of violin at SUNY, Stony Brook. He performs with his own string quartet and as a two-violin team with his wife, Teresa Testa.

The policy of the Louisville Orchestra to commission contemporary composers led to Harth's giving first performances of such works as Riegger's Theme and Variations and Rubbra's *Improvisation*, and he himself commissioned and gave the first performance of *Colloquies* by Dello Joio. However, he also plays the Classical repertory, and has recorded sonatas and quartets by Brahms, Schubert, Mozart and Fauré, revealing technical mastery and musical insight. His beautiful tone is enhanced by his 'Comte d'Armaille' Stradivari of 1737.

BORIS SCHWARZ/MARGARET CAMPBELL

**Hartig, Franz Christian** (*b* Heldenbergen, Oberhessen, 31 Jan 1750; *d* ?Munich, 1819). German tenor. From 1763 he was educated at a Jesuit seminary in Mannheim and in 1768, at the age of only 18, was appointed musical director of the Katharinenkirche in Oppenheim. Two years later he began legal studies in Mainz. By 1772 he was a member of Theobald Marchand's troupe in Frankfurt, and he later secured a post as a singer at the Mannheim court, where he had instruction from Anton Raaff. He made his début at Mannheim in the summer of 1774, singing in *Das Milchmädchen und die beiden Jäger*, a German version of Egidio Duni's *Les deux chasseurs et la laitière*. From 1777 he sang at Mannheim in the newly founded Nationaltheater (managed briefly by Marchand) as well as at the court theatre, his roles including that of Karl in Ignaz Holzbauer's *Günther von Schwarzburg* in 1777. Mozart's mother appreciated the singer's 'love and friendship' for her son, and Mozart himself praised Hartig's ability.

In 1778 he accompanied the court to Munich, and from then until his retirement in 1789 sang leading parts in both Italian opera and Singspiel (he sang Belmonte in the first Munich performance of Mozart's *Die Entführung*). He made several guest appearances in Mannheim and also, in 1795 and 1797, in Frankfurt. According to Lipowsky he was living in Munich in 1810–11 and is presumed to have died there.

Hartig's daughter Johanna (*b* Munich, 14 March 1779), after a spectacular début in Grétry's *Zémire et Azor* (in 1794), went to Stuttgart as leading soprano in 1797 and joined the Mannheim Nationaltheater in 1799. She retired from the stage in 1801, shortly after her marriage to the actor Karl Koch.

ROLAND WÜRTZ/PAUL CORNEILSON

**Hartke, Stephen (Paul)** (*b* Orange, NJ, 6 July 1952). American composer. He studied at Yale University, the University of Pennsylvania, where he was strongly influenced by Rochberg's break with postwar serialism, and the University of California, Santa Barbara. He joined the composition department at the University of Southern California in 1987 and served as composer-in-residence with the Los Angeles Chamber Orchestra from 1988 to 1992.

Hartke came of age with the American neo-romantics, but his music tends to avoid the lush textures and cinematic gestures common to many composers of that school. His orchestration shows the influence of middle-period Stravinsky, and his highly variegated rhythms have a nervous energy that draws variously on bebop jazz, the spiky minimalism of Louis Andriessen and Balinese gamelan music. His harmony, poised on the outskirts of tonality, is often marked by his close study of Franco-Flemish polyphony. Deeply affecting, hard-won lyrical 'breakthroughs' occur at the close of two important works of the 1990s, the Symphony no.2 (1990), written for the Los Angeles Chamber Orchestra, and the Violin Concerto (1992). Among his most performed works are *Pacific Rim* (1988) and *The King of the Sun* (1988).

ALEX ROSS

**Hartker Antiphoner** (*CH-SGs* 390–91). 10th–11th-century antiphoner and tonary. *See* SOURCES, MS, §II, 2.

**Hartknoch.** German family of publishers and musicians. Johann Friedrich Hartknoch (*b* Goldap, 18 Sept 1740; *d* Riga, 1 April 1789), whose father trained him as a pianist, became the nine-year-old J.F. Reichardt's teacher in 1761. He founded a book publishing firm in Mitau (now Jelgava) in 1763; a branch office, later established in Riga, soon became the main office, where he also published music, including Reichardt's *Vermischte Musicalien*, vocal scores of Singspiele and concertos. A catalogue of the firm (*c*1785) shows a predominance of works by the Mannheim school and by Bach's sons Carl Philipp Emanuel and

Johann Christian; the firm also published important writings by Herder (a close friend of Hartknoch's), Kant, Lomonossow, Karamsin, Knigge and Katharina II. Hartknoch's son Johann Friedrich Hartknoch (*b* Riga, 15 July 1768; *d* Dresden, 7 Sept 1819) gave up the Riga business in 1798 and moved to Leipzig in 1803, and his grandson Karl Eduard Hartknoch (*b* Riga, 9 March 1796; *d* Moscow, Jan 1834) was a composer and pianist who first appeared as a pianist in 1816 in Leipzig, and in 1819 became a pupil of Hummel at Weimar. He went as a private teacher to St Petersburg in 1824, and from 1828 was music teacher at the Moscow foundling hospital. His compositions are almost all for the piano: a sonata, a rondo, variations, nocturnes, two piano concertos, a piano trio and a sonata for violin and piano.

GUNTER HEMPEL

**Hartmann.** Danish family of musicians of German origin.

(1) **Johann Ernst [Joseph] Hartmann** (*b* Gross Glogau, Silesia [now in Poland], 24 Dec 1726; *d* Copenhagen, 21 Oct 1793). Composer and violinist. It is assumed that he had his musical training in the Jesuit college in Gross Glogau. In 1754 he joined the orchestra of the Prince-Bishop of Breslau, which was disbanded in 1757. In 1761 he was at the Rudolstadt court, but in the same year moved to the ducal court at Plön in Holstein, where he was made Konzertmeister. In October 1761 this duchy passed to the Danish crown, and the Plön band was called to Copenhagen to play in the theatre orchestra for Sarti's Italian opera in 1762–4. Hartmann returned to Plön in summer 1763, when he married, and again in 1764 when Sarti left Denmark, but in 1766 he was taken to Copenhagen again, settling there permanently as a member of the royal chapel. The conductorship of the orchestra being vacant and the 'virtuoso extraordinary' J.H. Freithoff sick, Hartmann became in effect the leader and acting conductor. He succeeded Freithoff as first court violinist in 1767 and was appointed music director in 1768. Gerber spoke highly of him; he had many pupils, including King Christian VII, and he left a manuscript *Violin-Schule* dated 1777 (in *DK-Kk*). Two of his sons were musicians: Johann Ernst (1770–1844), who was organist and choirmaster of Roskilde Cathedral from 1807, and August Wilhelm, father of (2) Johan Peter Emilius Hartmann.

Hartmann's duties included composing, but most of his music was lost in a fire that destroyed Christiansborg Palace in 1794. Besides two published works, the *Simphonie périodique* no.7 in D (Amsterdam, 1770) and *Air favori varié pour le clavecin ou harpe avec un violon obligé* (Copenhagen, 1792), several manuscripts survive: *VI sonates à deux violons et basse* op.1; a violin concerto (dated at Fredensborg 1780, written in collaboration with his pupil, the violinist Claus Schall); two Passion cantatas, *Forløserens død, opstandelse og himmelfart* and *Jesu dødsangst i urtegaarden*; and *Høytidssange* (1785), a cantata in honour of the crown prince, later King Frederik VI.

Hartmann's most significant works were his Singspiels, which he began to compose after the age of 50 and which, being written for the royal theatre, escaped the palace fire. In particular, the two he wrote to texts by Johannes Ewald, *Balders død* ('The death of Balder') (Copenhagen, 30 January 1779) and *Fiskerne* ('The fishermen') (Copenhagen, 31 January 1780), are important for the way in which he found an original musical expression for the incipient Romanticism of Ewald's plays, the first drawn from Norse mythology, the second based on a contemporary event that had demonstrated the natural nobility of humble people. These works, in which Hartmann rejected the popular Italian operatic style in favour of a more consistently dramatic conception involving an impressive use of chorus, are considered to have laid the foundation for Danish national Romantic opera. *Balders død* is an attempt at realizing the Nordic atmosphere of the sagas, and contains in the Valkyrie music a striking anticipation of Wagner. In *Fiskerne* Hartmann revealed a sympathy for folksong-like melody (the song 'Liden Gunver' is probably an actual folksong), and one is reminded that he provided Icelandic and Norwegian folksongs for La Borde's *Essai sur la musique ancienne et moderne* (Paris, 1780/*R*). The last stanza of the Danish national song *Kong Christian stod ved højen mast* occurs in *Fiskerne*, but the present melody was not part of the original score, and whether Hartmann is entitled to the credit he is traditionally accorded as its composer remains a matter of controversy. His melody to the song 'Rolfs Skattekonge, feig og raed' in another Singspiel, *Gorm den Gamle* (Copenhagen, 1785), on a subject from ancient Danish history, was adopted for the Faeroese national song. Other theatrical works include *Hyrdinden paa Alperne* (Copenhagen, 1783) and *Den blinde i Palmyra* (not performed). Abridged vocal scores of *Balders død* and *Fiskerne* were published in Copenhagen in 1876 and 1885–6 respectively and full scores, edited by J. Mulvad, in *Dania sonans*, vii (Egtved, 1980) and vi (Egtved, 1993) respectively.

(2) **Johan Peter Emilius Hartmann** (*b* Copenhagen, 14 May 1805; *d* Copenhagen, 10 March 1900). Composer and organist, grandson of (1) Johann Ernst Hartmann. His father August Wilhelm Hartmann was a violinist in the royal chapel orchestra (1796–1817) and then organist and choirmaster of Garnisonskirke (1817–24). In 1810 his mother was appointed a governess in the household of Prince Christian (VIII), and he became companion and playmate to the future Frederik VII. Although he later referred to his family circumstances as modest, he grew up in reasonable comfort and security, in contact with the highest levels of society, and he received a good education. His father taught him music theory and the organ, piano and violin. He began to compose as a child, and at the age of 15 played the violin in public with his lifelong friend August Bournonville, later a famous ballet-master; at 19 he succeeded his father as organist of Garnisonkirke. As his father did not want him to follow a career in music, he read law at the University of Copenhagen, graduating in 1828. From 1828 until 1870 he held an appointment in a government department, but also pursued a full career as a composer, organist, conductor and educator. In 1826 he made his début as a composer with a concert of his works, including a cantata to a text by Adam Oehlenschläger, the first of a series of collaborations with the dominant literary figure of Danish Romanticism, whose musical counterpart Hartmann was to become. In 1827 he began to teach at Siboni's newly founded

conservatory. His wife, Emma Sophie Amalia Zinn (1807–51), whom he married in 1829, was a remarkable woman, intelligent, lively, religious and artistic, an ideal companion who made their home a meeting-place for all the leading personalities of the time. She composed songs under the name Frederik Palmer.

In 1843 Hartmann succeeded C.E.F. Weyse as organist of Vor Frue Kirke, the cathedral of Copenhagen, where he remained active until his death. On the foundation of the Copenhagen Conservatory (1867) he was appointed a joint director with Gade and the conductor Paulli, also teaching there until his death. He was one of the founders in 1836 of the Musikforening, for many years the leading concert society in Copenhagen, where most of his own concert works had their first performances; he served as its president for 53 years. From 1839 he was also actively associated with the Studentersangforening, of which he was president from 1868 and for which many of his cantatas and choral pieces were written. Hartmann was the recipient of many honours, among them the title of professor (1849) and an honorary doctorate (1874) from the University of Copenhagen. Throughout his life he was respected as one of his country's great men, but whereas his son-in-law Gade achieved an international reputation through his association with Mendelssohn and the Leipzig circle and came to represent Danish music to the outside world, Hartmann never attracted much attention beyond Denmark. Hans von Bülow wrote in 1882 that Hartmann 'remained rather foreign to us Germans. He is simply by preference a national (not a local) composer ... for imagination, skill and taste he should be equally renowned with the international Gade'.

In 1836 Hartmann made a trip through Germany, Switzerland, Austria and France. Marschner accompanied him on the first part of the journey, and during the summer he met Spontini, Chopin, Rossini, Cherubini, Paer and Spohr. Only Marschner and Spohr, who gave the first performance of Hartmann's G minor Symphony in Kassel (1837), seem to have had any significance for his career. In 1839 he travelled again in Germany, this time meeting Franz Berwald and Clara Wieck in Berlin, and Mendelssohn and Schumann in Leipzig. In 1837 Schumann had begun to review Hartmann's music in the *Neue Zeitschrift für Musik*; these criticisms, which include a lengthy consideration of his opera *Ravnen*, continued with increasing appreciation until 1842, when he reviewed Hartmann's entry in the Norddeutscher Musikverein competition (the Piano Sonata in D minor op.34), agreeing with two of the judges, Spohr and Schwenke, that it should have been awarded first instead of third prize. Hartmann returned to Leipzig in 1844 to conduct the Gewandhaus orchestra in his overture to the play *Hakon Jarl*. He met Liszt in Hamburg in 1841 and accompanied him to Copenhagen, an acquaintance which, together with H.C. Andersen's visit to Weimar in 1855, resulted in a German performance of their operatic masterpiece *Liden Kirsten* (1846) in Weimar in 1856.

The music Hartmann encountered in the great European centres in the 1830s and 1840s seems not to have tempted him to imitation in any marked degree. On the contrary, it was during these years that he became more intensely Danish and, more particularly, 'Old Norse'. This characteristic aspect of Scandinavian Romanticism was already evident in the melodrama he wrote on Oehlenschläger's poem *Guldhornene* (1832), which was followed by other works in which the ancient sources of Scandinavian culture were brought to life with increasing power; these include his music to Oehlenschläger's dramas *Olaf den hellige* (1838), *Hakon Jarl* (overture 1844, intermezzo 1857), *Axel og Valborg* (1856) and *Yrsa* (1883), Bournonville's ballets *Et folkesagn* (1854), *Valkyrien* (1861) and *Thrymskviden* (1868), and the choral work *Vølvens spaadom* (1872). With these works, and others such as *Liden Kirsten* (in which he evoked the atmosphere of the medieval Danish ballads), the numerous hymns, biblical and national songs (especially those to texts by N.F.S. Grundtvig), Hartmann satisfied Danish national feelings, an achievement that assumed particular importance after Denmark's losses to Germany in the war of 1864. On Hartmann's 80th birthday Grieg wrote:

> What composer in Scandinavia with genuine feeling for the spirit of Scandinavia does not remember today what he owes to Hartmann! The best, the most profound thoughts that a whole posterity of more or less consequential spirits has lived on have been first expressed by him, have been made to resound in us by him.

Hartmann's working life of 80 years spanned virtually the entire development of 19th-century Danish music. It is remarkable that throughout most of this time he himself continued to develop; although he began to compose in the Classical spirit of Weyse, the finale of his Piano Sonata op.80 (1885) contains intimations of Carl Nielsen.

WORKS
*(selective list)*

OPERAS

Ravnen, eller Broderprøven [The Raven, or The Brother Test] (trylleopera, 3, H.C. Andersen, after Gozzi), op.12, Copenhagen, 29 Oct 1832, vs (Copenhagen and Leipzig, 1839); rev. in 4 acts, Copenhagen, 1865

Korsarerne [The Corsairs] (op, 3, H. Hertz), op.16, Copenhagen, 1835; vs (Copenhagen, 1883)

Liden Kirsten [Little Christine] (romantisk opera, 1, Andersen), op.44, Copenhagen, 12 May 1846; rev. in 2 acts, Copenhagen, 1858; vs (Copenhagen, n.d.)

OTHER STAGE

Ballets (A. Bournonville): Et folkesagn [A Folk Tale], 1854, collab. Gade, arr. pf (Copenhagen, n.d.); Valkyrien, op.62, 1861, arr. pf (Copenhagen, 1900); Thrymskviden [The Legend of Thrym], op.67, 1868, arr. pf (Copenhagen, 1868); Arcona, op.72, 1875, arr. pf (Copenhagen, 1879)

Incidental music for *c*16 plays, incl. Olaf den hellige (A. Oehlenschläger), op.23, 1838; Syvsoverdag (J.L. Heiberg), op.30, 1840–72, vs (Copenhagen, 1872); Undine (C. Borgaard), op.33, 1842, vs (Copenhagen, 1878); Hakon Jarl (Oehlenschläger), op.40, 1844–57, arr. pf (Copenhagen, 1873), ov. ed. S. Lunn (Copenhagen, 1954); Yrsa (Oehlenschläger), op.78, 1883, arr. pf (Copenhagen, n.d.), ov. (Copenhagen, 1946); Dante (Molbech), op.85, 1888

INSTRUMENTAL

Orch: 4 concert ovs.: d, op.3, 1825, Gejstlig ouverture, c, op.9, 1827, C, op.51, 1852, arr. pf 4 hands (Copenhagen, n.d.), En efteraarsjagt [An Autumn Hunt], op.63b, 1863, arr. pf 4 hands (Copenhagen, n.d.); Ov. to Axel og Valborg (Oehlenschläger), op.57, 1856; Ov. to Correggio (Oehlenschläger), op.59, 1858, ed. S. Lunn (Copenhagen, 1953); 2 syms.: g, op.17, 1835, E, op.48b, 1848; marches

Chamber: Sonata, fl/cl, op.1, 1825; pf qt, F, op.2, 1823; 3 vn sonatas: g, op.8 1826 (Leipzig, 1837), C, op.39, 1844 (Hamburg and Leipzig, 1846), g, op.83, 1886 (Copenhagen, n.d.); 2 str qts, G, 1848, A, 1855; Suite, vn/cl, op.66, 1864 (Copenhagen, 1866); Fantasi-allegro, vn/cl, 1889 (Copenhagen, 1900)

Pf: numerous pieces, incl. [6] Novelletten, op.55b, 1855 (Berlin, 1878); [9] Studier og novelletter, op.65, 1866 (Copenhagen, n.d.); Prissonata, op.34, 1843 (Leipzig, n.d.); Sonata no.2, op.80, 1885 (Copenhagen, n.d.)

Org: Fantasi, f, op.20, 1837 (Leipzig, 1837); Langfredag [Good Friday], Paaskemorgen [Easter Morning], op.43, 1847, 1886

(Copenhagen, 1886); Sørgemarch ved Thorvaldsens bisaettelse [Funeral march for Thorvaldsen's Burial], org, wind, 1844 (Copenhagen, 1844); Sonata, g, op.58, 1855–84 (Copenhagen, 1885). Complete organ works, ed. J.E. Hansen (Copenhagen, 1968)

VOCAL

Melodramas, incl. Guldhornene [The Golden Horns] (Oehlenschläger), op.11, spkr, orch, 1832 (Copenhagen, n.d.); Jurabjerget (Oehlenschläger), op.14. 1833

Cantatas, incl. Weyses minde [In memory of Weyse] (H. Hertz), op.36, vs (Copenhagen, 1843); Dryadens bryllup [The Dryads' Wedding], op.60, 1858, vs (Copenhagen n.d.); En sommerdag [A Summer Day], S/T, female vv, orch (Copenhagen, 1857); Foraarssang [Spring Song], op.70, 1871 (Leipzig and Copenhagen, 1875); Vølvens spaadom [Vølven's Prophecy], male vv, orch, op.71, 1872 (Copenhagen and Leipzig, n.d.); Hinsides bjergene [Beyond the Mountain], Mez, vv, orch, 1865 (Copenhagen and Leipzig, 1870)

Choruses, incl. Quando corpus morietur, 3 solo vv, chorus, str, op.15, 1850 (Copenhagen, n.d.); 6 sange, 4 male vv, op.61, 1860 (Copenhagen, 1860); [5] Religiøse sange og billedtekster, SATB, orch, op.73, 1872 (Copenhagen, 1880); [10] Religiøse og folkelige digte, SATB, unacc., p.86, 1888 (Copenhagen, 1888)

Sacred and secular songs, incl. Udvalgte sange [Selected songs] (Copenhagen, 1898); [89] Religiøse sange (Copenhagen and Leipzig, 1897)

(3) **Emil** [Wilhelm Emilius Zinn] **Hartmann** (*b* Copenhagen, 21 Feb 1836; *d* Copenhagen, 18 July 1898). Composer and organist, son of (2) Johan Peter Emilius Hartmann. He was taught music theory and the organ by his father and the piano by Anton Rée. A series of songs written during his childhood was later published under the title *Smaasange for ungdommen*. He made his public début as a composer in 1858 with the *Passionssalme*. In 1859 he collaborated with his future brother-in-law August Winding on music to Bournonville's *Fjeldstuen*, emulating the success of *Et folkesagn*, the ballet his father had written with Gade for Bournonville. He studied in Leipzig in 1860 and on his return in 1861 became organist of St John's, Copenhagen. In 1871 he moved to the Christiansborg Palace church, where he remained until his death.

Although he was by profession a church musician, Hartmann wrote a great deal for the theatre. His early stage works of the 1860s and 70s failed to equal the success of his first ballet, but his later compositions of this kind made a much stronger impression. Nevertheless it was his instrumental music that established his reputation, including symphonies and concertos, and works inspired by Scandinavian subjects, for instance the overture to Ibsen's *Haermaendene paa Helgeland* and the symphonic poem *Hakon Jarl*, a subject immortalized by his father. His arrangements of Scandinavian folksongs and dances, *Skandinavisk folkemusik*, gained an established place in the musical repertory in Denmark and abroad.

In Denmark Emil Hartmann was inevitably overshadowed by his father. However, he often travelled abroad conducting his own works and achieved a recognition that he felt he was denied at home. Walter Niemann (1906) observed that it was due primarily to Emil, and especially through *Haermaendene paa Helgeland*, that the name Hartmann was known in Germany. It is evident from the subjects of many of his works that he shared the national feelings of his father and Gade, but his style and expression, shaped no doubt to some extent by the Mendelssohnian atmosphere at Leipzig, is nearer to that of Gade than to the more profound nationalism of his father.

WORKS

Dramatic (all first perf. in Copenhagen): Fjeldstuen [The Mountain Cottage] (ballet, A. Bournonville), 1859, collab. A. Winding; En nat mellem fjeldene [A Night in the Mountains] (Hostrup), op.3, 1863; Elverpigen [The Elf Girl] (op, Overskou), 1867; Korsikaneren [The Corsican] (A. Hertz, after Saint-Georges), 1872; Øen i Sydhavet [The Island in the South Sea], incidental music, 1890; Ragnhild [Runic Spell] (op, J. Lehmann, after H. Hertz), 1896; Det store lod [The Big Prize] (A. Ipsen, after H. Hertz), 1897; En bryllupsfest i Hardanger [A Wedding Feast in Hardanger] (ballet), 1897

Vocal: Passionssalme (B.S. Ingemann), S, chorus, orch, Copenhagen Cathedral, Maundy Thursday, 1858; Havfruen [The Mermaid], chorus, orch, op.8, 1866; Vinter og vaar [Winter and Spring], chorus, orch, op.13; Ved sommertid [In Summertime], female vv; Rinaldo, cantata; Mod lyset [Towards the Light], op.33, cantata; Smaasange for ungdommen [Small Songs for Youth], pubd; further songs, sacred works, and works for male chorus or qt

Inst: 7 syms., incl. no.1, E♭, op.29, 1880 (Copenhagen, n.d.), no.2, a, 'Fra riddertiden' [From the Days of Knighthood], op.34 (Copenhagen, n.d.), no.3, D, op.42 (Copenhagen, 1889) [arr. Hartmann for pf duet]; Haermaendene paa Helgeland [Soldiers on Helgeland], ov., op.25 (Copenhagen, n.d.); Hakon Jarl, sym. poem, op.40; conc. for vn, g, op.19, 1877, conc. for vc, d, op.26, 1879, conc. for pf, f, op.47, 1889; Nordiske folkedanse, orch suite (Berlin, n.d.); Nordiske tonebilleder [Scandinavian Tone Pictures], op.11, pf; Skandinavisk folkemusik, op.30, arr. pf/orch; chamber music, incl. Nonet, op.43, Qnt, 1865, op.5, qts, trios, 2 vn sonatas

JOHN BERGSAGEL

**Hartmann, Christian Karl** [Saxon, Christian Karl; de Saxe, Chrétien-Charles] (*b* Altenburg, Saxony, 1750; *d* Paris, 1804). German flautist, clarinettist and composer, active in France. After serving the Duke of Saxony he moved to Paris about 1774 and became a member of the Opéra orchestra. From 1776 to 1782 he belonged to several masonic lodges, notable for their chamber groups (or *colonnes d'harmonie*). He left Paris in 1783 for a long journey across Europe, passing through The Hague, Hamburg (1786), St Petersburg and Erlangen (1790), and returning to Paris in 1792. With E.J. Floquet, the bassoonist Tulou and other instrumentalists whom he knew from the masonic lodges, he took part in founding the Paris Conservatoire, where he was a flute instructor; when it was reorganized in 1800 he was dismissed. He spent his remaining years in Paris.

Hartmann was regarded as one of the foremost virtuoso flautists of his day. His compositions, primarily intended for virtuoso display and showing a thorough understanding of the instrument, include flute concertos (published by 1783), two symphonies (*D-SWl*, one of them 'du globe aérostatique'), and several sets of duos, sonatas and airs with variations for the flute, as well as collections of modulating preludes (Paris, 1782) and of *points d'orgue* or cadenzas (*c*1786).

ROGER COTTE

**Hartmann, Georges** [Romain-Jean-François] (*b* Paris, 14 May 1843; *d* Paris, 22 April 1900). French music publisher. He started business in 1866, at 19 boulevard de la Madeleine, Paris. About 1878 he moved to 60 rue Neuve-St-Augustin; by the end of 1881 the street name had been officially changed to rue Daunou and the number to 20. In May 1891, after he went bankrupt, his business was acquired by Heugel, but he continued publishing in association with, and under the imprint of, Eugène Fromont.

Hartmann was in a sense the ideal publisher: a philanthropist of exceptional discernment and energy. Among his first publications was Massenet's youthful song, *Poème d'avril* (1866). This led not only personally, commercially and artistically to one of the most rewarding of publisher-composer relationships, but to greatly needed new standards of presentation of music publications (which may be seen in the vocal scores of *Esclarmonde* and *Le mage* as well as the de luxe editions of *Manon* and *Le Cid*). Among other composers whom Hartmann encouraged were Bizet (songs and piano works, 1868), Saint-Saëns (*La princesse jaune*, his first published opera, 1871), Franck, Lalo and Debussy (to whom he paid an annual salary of 6000 francs from about 1894). Through Fromont, Hartmann published several of Debussy's early works, and the score of *Pelléas et Mélisande* (1902) is dedicated to his memory. In all he published over 2000 works, his plate numbers running chronologically.

In 1873, with Edouard Colonne, Hartmann founded the Concert National (later the Concerts Colonne). He also collaborated with Alfred Ernst in a French translation of the *Ring* and was the French representative of the Wagner family and of the publisher Schott.

RICHARD MACNUTT

**Hartmann, Heinrich** (*b* Rehestädt, nr Arnstadt, *c*1580; *d* Coburg, bur. 3 Oct 1616). German composer. At Jena University, where he matriculated in 1600, he was probably a pupil of Georg Quitschreiber. In 1607, or early in 1608 at the latest, he became, according to a contemporary document, Kantor of 'the church and school at Coburg', where he remained until his death. Here he worked alongside Melchior Franck and Benedikt Faber, with both of whom he published occasional works. His two-part collection of motets (1613–17) contains 49 settings in German of psalms, psalm verses and other biblical texts and of hymns both old and new. As well as 13 five-part, 13 six-part and two ten-part motets, there are as many as 21 eight-part ones, for double choir, a type of texture for which Hartmann clearly had a special liking; he also adopted it in most of his occasional works. He combined contrapuntal and chordal writing to produce naively attractive sonorities. Two conservative elements in his music are his use of madrigalian devices to highlight the words and the absence of continuo parts.

WORKS

Edition: *H. Hartmann: Vier deutsche Motetten zu 6 und 8 Stimmen*, ed. A. Adrio, Cw, xcviii (1965) [with important preface]

Cantio gratulatoria (Zion spricht ach mein Herr und Gott) ... Zu Ehren ... Valentin Linden, 6vv (Jena, 1606)
Hochzeitlicher Gesang (Ein frommes Weib) zu Ehren . . . Gottschalck Peselern Und . . . Barbarae . . . Kretzschmers, 8vv (Jena, 1609)
Erster Teil: Confortativae sacrae symphoniacae, 5, 6, 8 and more vv (Coburg, 1613, 2/Erfurt, 1618)
Ander Teil (Erfurt, 1617)
Wedding motet, Ein schöne Frau erfreuet ihren Mann, 8vv (Coburg, 1615)
2 wedding motets, 8vv, 1611[7]; 1 wedding motet in M. Franck: Concentus musicales in nuptias, 8vv, (Coburg, 1613); 1 wedding motet, 6vv in M. Franck: Zwei neue Hochzeit Gesäng (Coburg, 1616); 1 motet, Jesus discipulis suis, 6vv, 1617[1]; 1 motet, 8vv, 1618[1]; 1 motet, Lobe den Herren, meine Seele, 8vv, 1621[2]; 2 parody masses, 5vv, bc, in C. Vincentius: Missae ad praecipuos dies festos accomodatae (Erfurt, 1630); 2 songs, 2 motets in Cantionale sacrum I, II (Gotha, 1646, 1648)
MSS of motets, incl. many from Confortativae sacrae symphoniacae, *D-Bsb, Dl, Rp, W, Z, PL-WRu*

ADAM ADRIO/DOROTHEA SCHRÖDER

**Hartmann, Karl Amadeus** (*b* Munich, 2 Aug 1905; *d* Munich, 5 Dec 1963). German composer. He studied with Joseph Haas at the Akademie der Tonkunst, Munich (1924–9), and with Herman Scherchen at festivals (Munich, 1929–31) and seminars (e.g. Strasbourg, 1933). Between 1928 and 1932 he organized a series of contemporary music concerts in collaboration with the

artists' association Die Juryfreien, an experience that influenced his theories on the interaction of the arts and their socio-political environments. He maintained that: 'The categorization of art as political or non-political, engaged or disengaged, seems to be somewhat superfluous, for no artist, unless wishing himself as written off to nihilism, can sidestep his commitment to humanity'. Following the success of the Concerto for Trumpet and Wind Ensemble in Strasbourg (1933), Hartmann attracted international recognition with a performance of his symphonic poem, *Miserae*, at the Prague ISCM Festival (1935). Shortly after, his First String Quartet won first prize at the Carillon Chamber Music Competition, Geneva (1936), and *Friede Anno '48*, a cantata in memory of Alban Berg, was awarded high distinction from the Emil Hertzka Memorial Foundation, Vienna (1937). His creative output can be divided into four principal phases: early works written during the final years of the Weimar Republic (1927–32); politically charged works written during World War II (1933–45); works that exhibit creative gestation, revision and consolidation (1945–53); and works that search for a new compositional path (1953–63).

Hartmann's early compositions (1927–32) include a series of works for small chamber ensemble, solo sonatas and suites for violin and piano, five chamber operas comprising the *Wachsfigurenkabinett* (1928–32), and a series of a cappella settings of texts by Karl Marx, Johannes Becher and Max See. These works project social criticism through the use of satire and irony coupled with references to jazz and Baroque dance and contrapuntal forms. Attacking American values, the boom and bust syndrome and the crass materialism of the age, they clearly identify the composer as a socially active artist.

*Karl Amadeus Hartmann*

Hartmann's second period coincided with the duration of the Nazi regime. After an overt withdrawal from political life, he composed *Bekenntnismusik*, confessional music in spiritual and aesthetic opposition to the political climate. His titles (*Miserae*, *Concerto funebre*, *Sinfonia tragica*, *Klagegesang*), subtitles (*Versuch eines Requiems*), dedications and prefaces ('to the victims of the Dachau concentration camp' [*Miserae*]) and choice of texts (Walt Whitman: *Leaves of Grass*, Gryphius Sonnets) reflect his opposition to the ruling party. The plot of the opera *Simplicius Simplicissimus* (1934–5, rev. 1956), taken from H.J.C. von Grimmelshausen's novel *Der abenteuerliche Simplicissimus*, draws an historical analogy between the physical, environmental and spiritual devastation of the Thirty Years War and the Third Reich.

Hartmann's compositional strategies and musical borrowings also attest to his political resistance. Works condemned by Joseph Goebbels in official statements outlining the Nazi aesthetic became sources for musical quotation. Other materials were derived from Hebraic incantation and folk music. These techniques are apparent in scores such as *Miserae* (1934), the First String Quartet (1933–5), and the Adagio of the overture to *Simplicius Simplicissimus* among others. The *Concerto funebre* (1939, rev. 1959) includes thematic references to the Hussite chorale, a Russian revolutionary workers' hymn, and 'Tábor' and 'Blaník' from Smetana's *Má vlast* cycle. Embedded within the 'Trauermarch' of the Second Piano Sonata (1945) is a quotation of the revolutionary song *Brüder zur Sonne, zur Freiheit*. Thematic materials and technical devices used by Mahler, Bartók, Stravinsky, Berg, Webern and Hindemith appear in works such as the *Sinfonia tragica*.

The defeat of the Nazis in May 1945 signified the beginning of a transitional period for Hartmann. He established the Musica Viva concert series in Munich and worked as music dramaturg at the Staatsoper in Munich. After a performance of the Symphonic Overture at Darmstadt in 1947, he received an almost continuous stream of prizes, fellowships and commissions. Among these were the Munich music prize (1949), the arts prize of the Bavarian Academy of Fine Arts (1950), the ISCM Schoenberg Medal (1954) and the Berlin arts prize (1961).

During these years Hartmann revised several of the major works composed during the war, wrote the Second String Quartet (1949) and published six symphonies (1945–51), many of which are based on material from earlier compositions. As a group, the symphonies demonstrate the many varied influences that became part of Hartmann's symphonic style. The First (1935–6, rev. 1954–5) testifies to the importance of Mahler. The Second (1945–6) and Third (1948–9) recall Berg, while Bartók and Bruckner are suggested respectively in the scherzo and slow movements of the Fourth (1946–7). The Sixth (1951–3) draws on Stravinsky's early and neo-classical styles, as well as on Berg's fusion of developing variation and fugue. (It is noteworthy that Hartmann's penchant for fugue, chaconne, passacaglia and ritornello forms, while ultimately a tribute to J.S. Bach, was profoundly influenced by Reger.) It was also in these works that Hartmann developed a polyphonic style based upon layered and paired mirror images, themes and motives sound simultaneously with their inversions or retrogrades.

A prevailing adagio concept also appears, characterized by bridge forms that proceed through alternating sections of stress and relaxation to a point of climax before rapidly subsiding to an original point of departure.

In the last decade of his life (1953–63) Hartmann began to explore new compositional techniques. Primary among these was the exploration and application of Blacher's theories of variable metre in works such as the Concerto for Piano (1953), the Concerto for Viola (1955) and the palindromic Scherzo for Percussion Ensemble (published posthumously). In the Piano Concerto, thematic material is shaped into a palindromically arranged series of changing metres. In the first movement of the Viola Concerto, based on the French rondeau form of alternating études and couplets, an additive process is used: each alternating étude and couplet is four measures longer than its immediate predecessor. The first movement of the Seventh Symphony (1957–8), employing a slightly different compositional scheme, is comprised of two repetitions of the sequence: fugue, concerto, tutti. As a fusion of fugue and variation forms, the second fugue acts as a variation of the first while the concerto sections also disclose variations of the fugue subject. Within this process, mirror patterns occur within individual parts. The second movement of the work is an elaborate embodiment of the aforementioned adagio concept; the third movement is a concerto grosso blending some of the elements of the Fifth Symphony with those of the two concertos.

Late in life Hartmann returned to texts similar to those set in his earlier *Bekenntnismusik*. 'Ghetto' (1960–61), his movement of *Jüdische Chronik*, a work to which Blacher, Henze, Dessau and Wagner-Régeny also contributed, sets a text referring to the Warsaw Ghetto. *Gesangsszene* (1963), based on the prologue to Jean Giraudoux's drama *Sodome et Gomorrhe* is a universal plea, warning of the consequences of an economic division of rich and poor nations, the exploitation of science, the abuse of technology, and the pollution of the physical and spiritual environment. A synthesis of his earlier symphonic achievements and an exploration of a new formal and gestural rhetoric, Hartmann describes the composition as:

> a work-of-art with a message. It needs to be grasped in terms of its structure and technique, but it should be understood in its spiritual content, which is not always easily formulated verbally. The work should be an expression of content of such a broad generality that tables of synonyms and explications appear insufficient and by comparison blind and sterile.

### WORKS

#### STAGE

Wachsfigurenkabinett (5 chbr ops, E. Bormann), 1929–30, Munich, 28 May 1988

Leben und Sterben des heiligen Teufels (Rasputin), Munich, 1930

Der Mann, der vom Tode auferstand, completed by G. Bialas and H.W. Henze

Chaplin-Ford-Trott, completed by Henze

Fürwahr, completed by W. Hiller

Die Witwe von Ephesus

Simplicius Simplicissimus '3 Szenen aus seiner Jugend' (chbr op, 3 scenes, H. Scherchen, W. Petzet, K.A. Hartmann, after H.J.C. von Grimmelshausen: *Der abenteuerliche Simplicissimus*), 1934–5, rev. 1956, radio broadcast, Munich, 2 April 1948 [as Des simplicius simplicissimus Jugend]; staged, Cologne, 20 Oct 1949; rev. staged, Mannheim, 9 July 1957

Undine, unfinished, 1955, frags. in *D-Mbs*

Macbeth, unfinished, 1959, frags. in *Mbs*

#### ORCHESTRAL

Syms.: Sym. no.1 'Versuch eines Requiems' (W. Whitman), A, orch, 1935–6, rev. 1954–5; Sym. 'L'oeuvre', 1937–8; Sinfonia tragica, 1940–43; Sym. no.2 'Adagio', 1945–6; Sym. no.4, str, 1946–7; Sym. no.3, 1948–9; Sym. no.5 'Hommage à Stravinsky' (Symphonie concertante), 1950; Sym. no.6, 1951–3; Sym. no.7, 1957–8; Sym. no.8, 1960–62

With solo insts: Chbr Conc., cl, str qt, str orch, 1930–35; Conc., tpt, wind, 1932; Konzertante Musik, vc, orch, 1932–3 [lost]; Symphonie divertissement, bn, trbn, db, chbr orch, *c*1932–4; Concerto funebre, vn, str, 1939, rev. 1959; Conc., 2 tpt, wind, db, 1948–9; Conc., pf, wind, perc, 1953; Conc., va, pf, wind, perc, 1955

Other: Miserae, sym. poem, 1934; Ov. 'Simplicius Simplicissimus', 1934–5; Suite 'Simplicissimus', 1934–5; Sinfonia tragica, 1940–43; Symphonische Hymnen, 1942; Sym. Ov., 1942; Klagegesang, 1944–5; Sym. Suite: Finale 'Vita nova', 1948; Fugue–Scherzo, perc, 1956–7 [completed by W. Hiller, 1992]

#### VOCAL

Cant. (J.R. Becher, K. Marx), a cappella chorus, 1929; Profane Messe (M. See), a cappella chorus, 1929–30; Friede Anno '48 (cant., A. Gryphius), S, SATB, pf, 1936–7; Lamento (cant., Gryphius), S, pf, 1955 [rev. of Friede Anno '48]; Ghetto (J. Gerlach), A, Bar, nar, chbr chorus, small orch, 1960–61 [3rd movt of Jüdische Chronik, collab. B. Blacher, P. Dessau, H.W. Henze, R. Wagner-Régeny]; Gesangsszene (J. Giraudoux: *Sodome et Gomorrhe*), Bar, orch, 1963

#### CHAMBER

Ens: Burleske Musik, wind sextet, perc, pf, 1921; Kleines Konzert, str qt, perc, 1931–2; Tanzsuite, wind qnt, 1931; Toccata variata, 10 wind, pf, perc, 1931–2, lost; Str Qt no.1 'Carillon', 1933–5; Str Qt no.2, 1945–6 [rev. str orch]; Lied, tpt, wind

Solo inst (pf, unless otherwise stated): Sonata no.1, vn, 1927; Sonata no.2, vn, 1927; 2 Suites, vn, 1927; Jazz Toccata und Fuge, *c*1928; Kleine Suite no.1, 1929–30; Kleine Suite no.2, 1929–30; Sonatina, 1931; Sonata, 1932; Sonata 'den 27. April 1945', 1945, rev. 1947

Principal publisher: Schott

ANDREW D. McCREDIE

**Hartmann, Rudolf** (*b* Ingolstadt, 11 Oct 1900; *d* Munich, 26 Aug 1988). German director. He studied in Munich and Bamberg, then joined the municipal theatre of Altenberg as resident director (1924). After engagements in Nuremberg (1928–34) and with the Berlin Staatsoper (1934–8), he was invited by Clemens Krauss to become chief director of the Bayerische Staatsoper in Munich, where he remained until 1944. It was during this period that he formed his personal and professional association with Richard Strauss. He directed the premières of *Friedenstag* (1938) and *Capriccio* (1942) at Munich. He was also responsible for the abortive first production of *Die Liebe der Danae*, whose first night at Salzburg was cancelled when the theatres closed in August 1944. The opera was eventually staged by Hartmann in Munich in 1952. This was the year he was appointed Staatsintendant of the Bayerische Staatsoper, where he consolidated Munich's status as the Strauss city after World War II by restaging most of his operas there. He had directed *Die Meistersinger von Nürnberg* at the first postwar Bayreuth Festival (1951) in a traditional production which contrasted starkly with Wieland Wagner's 'new Bayreuth style' and he was never invited back. After 1952 he set about establishing Munich as a rival to Bayreuth as a centre of Wagner production. In 1967 he embarked on a late freelance career, directing Strauss's *Die Frau ohne Schatten* (1967) and a romantic production of *Die Meistersinger von Nürnberg* (1968) at Covent Garden, where earlier triumphs had included *Elektra* (1953), a *Ring* cycle (1954) and a legendary *Arabella* with Lisa della Casa and Dietrich Fischer-Dieskau (1965). His work was notable for his fidelity to the composer's and librettist's conception. He was a devotee of the German ensemble system with house casts and meticulously prepared new productions.

HUGH CANNING

**Hartmann, Thomas (Alexandrovich de)** [Gartmann, Toma Aleksandrovich] (*b* Khoruzhevka, 9/21 Sept 1885; *d* Princeton, NJ, 26 March 1956). Ukrainian composer and conductor. He studied the piano with Yesipova at the St Petersburg Conservatory (1900–02) and took lessons in composition from Arensky and in counterpoint from Taneyev (1907). Subsequently he studied with Boleslav Yavorsky (1906–12) and taught at the Tbilisi Conservatory (1919–21). Hartmann met George Gurdjieff (1877–1949) and joined his circle of 'Seekers of the Truth'. For the next 12 years he travelled widely with him and they collaborated in the composition of numerous piano works which were used as accompaniments to the dances and exercises performed by Gurdjieff's pupils. He lived variously in Erevan, Constantinople, Berlin (where he founded a Russian orchestra), Paris and New York (from 1951). His early compositions show influences from Musorgsky and the Russian tradition in general, but from 1925 he introduced modernistic traits, particularly polytonality and polyrhythm.

WORKS
(*selective list*)

Stage: Esther (op); Alenkiy tsvetochek [Alenka's Flower] (ballet, after S.T. Aksakov), 1907; Der gelbe Klang (W. Kandinsky); Babette (ballet), 1935

DETLEF GOJOWY

**Hartmann von Aue** [Hartmann von Ouwe, Meister Hartman] (*b* c1160–65; *d* after 1210). German poet. He was a member of a freeborn family from Aue (presumably in south-west Germany or northern Switzerland), received a religious education and rose to ministerial rank. His preeminence as an epic poet is due to his courtly poetic romances, *Erec*, *Iwein*, *Gregorius* and *Der arme Heinrich*, and as a lyric poet to his Minnelieder. His verse is highly developed, his language graceful and both rhyme and rhythm are highly polished. Hartmann's Minnelieder encompass the conventional concept of courtly love, yet they reveal a note of impatience with this deceptively formal, socially hidebound ideal. In its place, they portray the experience of love without the courtly conventions. He took part in a crusade, most probably that of 1189–90; and the epics which he wrote after that reflect his humility and devoutness.

Hartmann's poetry consists of 18 lieder (without melodies), four of which may not be by him. In substance and motivic material it owes something to French and Provençal models (notably the work of Chrétien de Troyes, the legends, and troubadour strophic structure). His poem *Ich muoz von rehte den tac iemer minnen* (ed. Lachmann, 215.14) may be a contrafactum of one of several similarly built Romanic models, the most famous of which is Gace Brule, *Ire d'amour qui en mon cuer repaire* (R.171). Hartmann's poem is published with this melody in Aarburg, 38.

BURKHARD KIPPENBERG

**Hartog, Eduard** [Isaac] **de** (*b* Amsterdam, 15 Aug 1825; *d* The Hague, 5 Nov 1909). Dutch composer and pianist.

In Amsterdam he studied the piano with Bertelman and Henry Litolff and composition with Heinze, completing his studies in Paris with Damcke and with K.A.F. Eckert, the accompanist and conductor of the Théâtre Italien. He remained in Paris, teaching the piano and giving concerts, from 1852 to 1900 when he returned to the Netherlands. He contributed much to advancing the cause of French music, as a collaborator in Pougin's supplement to Fétis's *Biographie universelle* and later as a journalist in The Hague.

De Hartog was one of the first Dutch composers to escape the influence of Mendelssohn and his followers. His orchestral *Equisses caractéristiques* op.51 contain striking rhythmic and Spanish colouristic elements; in some of his piano works, such as the Barcarolle op.16, *Poésies musicales* op.20 and the large-scale *Sonate-Symphonie* op.21, he was influenced by Chopin, Liszt and Alkan. He also composed three *opéras comiques*, three symphonic poems, a setting of Psalm xliii op.43 and the hymn *Chant de mai 'Au soleil'* op.31 for soloists, chorus and orchestra, three string quartets, other chamber works and songs.

JAN TEN BOKUM

**Harton, Andrea.** German lute maker. *See under* HARTUNG, MICHAEL.

**Harton, Michielle.** *See* HARTUNG, MICHAEL.

**Hartung, Johannes** [Hans] (*b* Ansbach, 1493; *d* Heilsbronn, 15 Oct 1554). German music collector and composer. He studied at the University of Leipzig from 1511, and in 1514 took the bachelor's degree. Even before he matriculated he seems to have known the university deacon Nikolas Apel, whose love of music may have stimulated Hartung's interest in collecting musical works. He was one of Luther's early adherents and from 1517 was the lawyer and imperial notary of the Cistercian monastery at Heilsbronn which had embraced the Reformed faith; in 1523 he became its chief magistrate and first secular official. Between 1538 and 1548 he compiled the seven volumes known as the *Heilsbronner Chorbücher* (the four surviving volumes are now in *D-ERu* 473, 1–4) which contained the complete repertory of an early Lutheran church choir. Although nearly four-fifths of the contents are from contemporary printed volumes, the four surviving volumes constitute the unique or primary source of a large number of compositions; for this reason they are among the most important south German sources of the Reformation period. In 1547 Hartung's daughter married Caspar Othmayr, whose *Bicinia sacra* (Nuremberg, 1548; RISM 1547[18]) contains two pieces signed 'J.H.' (one is incomplete, the other ed. in EDM, 1st ser., xxvi, 1956). Eitner ascribed them to Johann Heugel, and Albrecht to Joachim Heller. On stylistic grounds both attributions are doubtful and it seems probable, in view of the relationship between Hartung and Othmayr, that the pieces are by Hartung.

FRANZ KRAUTWURST

**Hartung, Michael** [Harton, Michielle] (*fl* Padua, *c*1591–*c*1627). German lute maker. He came from Tieffenbruck in the Bavarian Alps. In 1590 he bought his freedom, and according to E.G. Baron (1727) was apprenticed to Leonardo Tieffenbrucker the younger in Venice. However surviving evidence (including his instrument labels) places him in Padua between at least 1591 and 1627. References cited by Toffolo appear to refer at least in part to another Michael Hartung, whose relationship to the luthier has yet to be established.

Hartung's surviving instruments include three lutes in the Germanisches National Museum, Nuremberg; number MI 56 is a small bass lute from 1599; MI 44 is a large bass from 1602; MIR 899 is undated, and has a later extension added. There are further instruments in Birmingham, Ann Arbor, Washington DC (Folger Shakespeare Library: a lute dated 1598), Bologna (Museo Civico, no.1808, dated 1599) and Füssen (Museum der Stadt, dated 1611). Hellwig (1971) mentions a further instrument dated 1594 in a private collection. These are typical of their period, with a rounded profile and multi-rib backs of striped heart- and sapwood yew. Hartung's brand consists of the initials MH on either side of a tall cross. This is clearly visible on the endclasp of a large multi-rib yew lute in two pictures by the Italian still-life painter Evaristo Baschenis.

Hartung's instruments have often been confused with those of Andrea Harton, possibly a relative. Andrea worked in Venice, and only two instruments by him are known to survive. An ebony and ivory theorbo, now converted to a German Baroque lute, is in the Musikhistorisk Museum og Carl Claudius Samling, Copenhagen (no.102A), and is dated 1617. The second instrument is in the Shrine to Music Museum, Vermillion, South Dakota.

LYNDA SAYCE

**Härtwig, Dieter** (*b* Dresden, 18 July 1934). German musicologist. He studied musicology at Leipzig University where his teachers included Besseler, Serauky, H.C. Wolff and Eller (1954–9); he took the doctorate there in 1963 with a dissertation on the life and works of Wagner-Régeny, and completed the *Habilitation* there in 1970 with a work on Fidelio Finke. He worked as a Dramaturg at the Staatstheater in Schwerin (1959–60) and as lecturer in music history at the Dresden Musikhochschule (1960–62; 1973–91), where he was made honorary professor in 1984. Härtwig was artistic director of the Dresden

Philharmonic (1965–97), on which he has written several monographs, and he is active as a music journalist. His major research has been on the music history of Saxony.

HORST SEEGER/MICHAEL MÄRKER

**Harty, Sir (Herbert) Hamilton** (*b* Hillsborough, Co. Down, 4 Dec 1879; *d* Brighton, 19 Feb 1941). Irish composer, conductor and pianist. He was taught the viola, the piano and counterpoint by his father and at the age of 12 was organist at Magheracoll Church, County Antrim. He held organist's posts in Belfast and Dublin, and in Dublin was advised and helped by the Italian composer Michele Esposito, professor of the piano at the Royal Irish Academy of Music. Harty went to London in 1900 and soon became known both as a promising composer and as an outstanding accompanist. His Trio (1901) and Piano Quartet (1904) won prizes, but more significant was the success of his *Comedy Overture* (Promenade Concerts, 1907). At the 1907 Cardiff Festival Harty's wife Agnes Nicholls, whom he had married in 1904, was the soprano soloist in his fine setting of Keats's *Ode to a Nightingale*. Szigeti gave the première of his Violin Concerto in London in 1909; the tone poem *With the Wild Geese* was performed at Cardiff in 1910 and the cantata *The Mystic Trumpeter* (to words by Whitman) at the 1913 Leeds Festival.

Meanwhile Harty had also been establishing himself as a conductor with the LSO, and during World War I he frequently appeared in Manchester with the Hallé Orchestra, of which he was appointed permanent conductor in 1920. For the next 13 years he made the Hallé probably the best orchestra in England. While his tenure was not free from the controversy inseparable from his mercurial, witty personality, Harty introduced many new works and composers to his audiences; the music of Bax, Sibelius, Casella, Berlioz, Moeran, Walton and Strauss featured largely in his programmes. Outstanding occasions were the first performances in England of Mahler's Ninth Symphony (27 February 1930) and of Shostakovich's First Symphony (21 January 1932); the first Manchester performances of Mahler's Fourth Symphony (1927) and *Das Lied von der Erde* (1930); and the first public performance of Lambert's *The Rio Grande* (12 December 1929), with Harty as pianist and the composer conducting. His florid orchestrations of Handel's *Water Music* and *Fireworks Music*, and his own *Irish Symphony*, were also performed during his Hallé period, which ended in resignation and acrimony in 1933. Thereafter Harty was principally associated with London orchestras and conducted the first performance of Walton's First Symphony (without finale) on 3 December 1934 (LSO), subsequently giving the first performance of the completed work on 6 November 1935 (BBC SO). Recordings capture the brilliance of his conducting. They include *The Rio Grande*, Walton's First Symphony, some outstanding Berlioz extracts and Elgar's *Enigma Variations* and Cello Concerto (with W.H. Squire). His compositions deserve to survive, for they are attractive; several have been recorded by the Ulster Orchestra. Harty was knighted in 1925 and received the gold medal of the Royal Philharmonic Society in 1934.

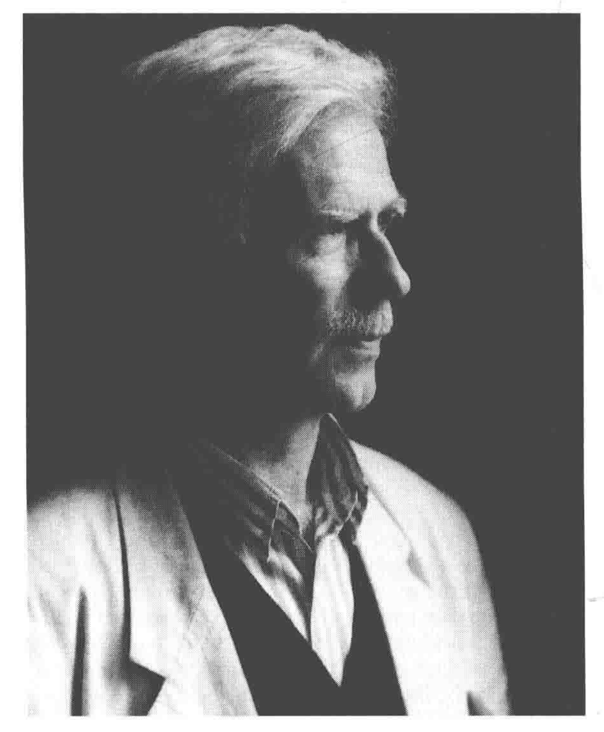
MICHAEL KENNEDY

**Harvey, Jonathan (Dean)** (*b* Sutton Coldfield, 3 May 1939). English composer. After studies at Cambridge (MusD, 1972) and Glasgow universities, he was a lecturer at Southampton University from 1964, and successively lecturer, reader, and professor at the University of Sussex from 1977 to 1993. He then became part-time, honorary professor at Sussex, and also part-time professor at Stanford University from 1995.

With the encouragement of his father, Harvey began to compose at an early age. Studying with Erwin Stein and Hans Keller, the influence of (among others) Bartók and Britten was soon complemented by interest in the serial techniques of Schoenberg and Webern, and also in the alliance between modality and mysticism found in Messiaen. An early ability to generate substantial structures by means of such diverse sources is demonstrated in Harvey's Symphony (1966), but at that date his creative evolution had only just begun. During the mid-1960s he became increasingly aware of new attitudes to time and space in the music of Stockhausen (on whom he published a monograph in 1975), and a period of study at Princeton with Babbitt strengthened his concern with post-tonal compositional systems as well as with the possibilities of electro-acoustic techniques. He began to include material on tape alongside writing for instrumental and vocal performers, as in *Cantata VII: On Vision* (1971) and the *Inner Light* trilogy (1973–5).



The title of the trilogy points to one of the most important of Harvey's discoveries and interests, the writings of Rudolf Steiner (1861–1925), whose meditative approach to spirituality is embodied in most of Harvey's mature works in varying degrees. In the first string quartet (1977) Harvey responded to Steiner's idea that 'the future development of music will . . . involve a recognition of the special character of the individual note', which 'expands into a melody and harmony leading straight into the world of the spirit'. There is a clear affinity between Harvey's quartet and the contemplative harmonic explorations of Stockhausen's *Stimmung*, while its dance-like melodic character evokes the musical world of Messiaen. But for Harvey, like Stockhausen, the best way to explore 'the special character of the single note' was by means of electro-acoustics, and as an early recruit to IRCAM he

found Boulez's Paris Institute a stimulating environment for the development of his technical and aesthetic predispositions.

Beginning with *Mortuos plango, vivos voco* (1980), a brilliantly successful tape piece built from the sounds of a bell and a boy soprano, Harvey progressed to one of his most substantial and satisfying scores, *Bhakti* for fifteen players and pre-recorded tape (1982). Bhakti is a Hindu religious term signifying 'devotion to a god, as a path to salvation', but it is also a form of yoga, and its musical implications involve the exploration of devotional states which combine the contemplative and the celebratory. Its range of expression and spontaneity of musical character, as well as its technical assurance, makes *Bhakti* one of the outstanding British compositions of its time, and it had a decisive impact on Harvey's later work.

One of Harvey's most revealing comments is that 'the bass moves into the middle: that is our revolution' (Harvey, 1982, p.2). This implies rejection of tonality's bass-generated coherence, and an embrace of the new freedoms and possibilities of an atonal language in which various kinds of mirror symmetry provide generative impetus for an idiom that can move flexibly through musical space, rejecting the rootedness of traditional kinds of harmonic function.

Harvey has increasingly favoured live electronic transformation as a means of exploring the intense ambiguities present within sounds and between instruments, and these explorations can generate highly dramatic structures and ideas, as in *Madonna of Winter and Spring* (1986). Harvey has also composed two operas, *Passion and Resurrection* (1981) and *Inquest of Love* (1991–2), but his music seems most fully itself when the drama is implicit in textures and structures, through which acoustic and electro-acoustically modified sounds can interact. It is therefore a logical development for Harvey that from the mid-1990s he has been working with what he terms 'the new Pythagoreanism', using computer manipulation to explore harmonic structures in ways which align him with the French 'spectralist' school of composers.

*Jonathan Harvey, 1995*

After *Inquest of Love* Harvey's works of the 1990s ranged from the ritual dance of *Lotuses* (1992) and the *Bhakti*-like euphony of *One Evening . . .* (1994) to the fierce rituals of *Advaya* (1994) and *Soleil noir/Chitra* (1995). For all its spiritual poise and meditative intensity, his music does not shun darker moods and more turbulent feelings. *Scena* (1992), a work without an electro-acoustic element, is a concentrated violin concerto which charts a spiritual transformation from a powerfully human sense of grief and rage to an otherworldly release. In *Scena* Harvey displays a resourceful command of instrumental sonority. His writing for strings may often resist their more traditional lyrical qualities, but it proceeds from a deep knowledge and experience of their technical possibilities, reflecting his respect for the music of Xenakis and the younger, 'complex' composers (Ferneyhough, Dillon), and also his close association with such virtuoso performers as the cellist Frances-Marie Uitti and the Arditti Quartet.

In 1995 Harvey gave the Bloch Lectures at Berkeley, and their title, *In Quest of Spirit: Explorations of the Spiritual Nature of Music*, indicates his continued commitment to a view of modern man as having the potential for developing what he terms 'a free-willed unity of consciousness, which contains divergence, beyond opposites'. Harvey's music is no less representative of a unity that contains and even rejoices in divergence, in keeping with his understanding of music's inherent duality and ambiguity, and, above all, his search for a spiritual dimension in which energy and stillness interact.

ARNOLD WHITTALL

**Harvey, Mary.** *See* DERING, MARY.

**Harwood, Basil** (*b* Woodhouse Down, Olveston, Glos., 11 April 1859; *d* London, 3 April 1949). English organist and composer. After winning a scholarship to Trinity College, Oxford, where he gained a degree in classics and modern history (1881), he took the BMus in 1880 after studying under Corfe. In 1882 he travelled to Leipzig to study composition under Jadassohn and the organ under Robert Papperitz. On returning to England he took further organ lessons with George Riseley of Bristol Cathedral. In 1883 he began a series of organist appointments: St Barnabas's, Pimlico (1883–7), Ely Cathedral (1887–92) and Christ Church, Oxford (1892–1909). Besides his responsibilities at Christ Church, Harwood was also precentor of Keble College (1892–1903), conductor of the Oxford Orchestral Association (1892–8) and the founder-conductor of the Oxford Bach Choir (1896–1909). In 1909 Harwood retired from the music profession in order to manage the family estate in Gloucestershire.

As a composer Harwood concentrated essentially on music for ecclesiastical use. Although he produced a number of large-scale choral works for provincial festivals, he is best known today for his liturgical works, notably his anthem *O how glorious is the Kingdom*, the Service in A♭ and numerous fine hymn tunes. A highly capable organist, he made a substantial contribution to the repertory of English Romantic organ music with his exacting Sonata no.1 in C♯ minor op.5, the *Dithyramb* op.7 (much admired by Elgar) and the Toccata op.49, pieces which demand a considerable virtuoso technique. His shorter organ works and many of his anthems incorporate hymn tunes reflecting a lifelong devotion to hymnody and its cultivation.

WORKS
*(selective list)*

Choral: Inclina domine (Ps lxxxvi), op.6, S, chorus, orch, 1898; As by the Streams of Babylon (Ps cxxxvii), op.20, S, chorus, orch, 1907; Ode on a May Morning (J. Milton), op.27, chorus, orch, 1913; Love Incarnate (R. Browning), op.37, semichorus, chorus, orch, org, 1925; Ye Choirs of New Jerusalem, op.47, chorus, orch, org, 1928; Sacrifice Triumphant, op.64, S, T, B, chorus, org, 1939

Anthems and motets: O Salatus, op.2/2, 1882; O how glorious is the Kingdom, op.12, 1898; This is the day which the Lord hath made, op.21, 1908; Thy boundless love to me (P. Gerhardt, trans. J. Wesley), op.22, 1908; Festival of the Sons of the Clergy, 1909; 2 Anthems, op.60, 1937; 4 Motets, op.62, ?1938; 6 Short Anthems or Introits, op.61, ?1938

Many hymns, service settings and partsongs

Org: Sonata no.1, c♯, op.5, 1886; Dithyramb, op.7; 6 Pieces, op.15, 1902; Capriccio, op.16, 1903; 2 Sketches, op.18, 1903; Conc., org, orch, D, op.24, 1910; [3 Pieces], op.25, ?1911; Sonata no.2, f♯, op.26, 1912; In an Old Abbey, op.32, 1923 [orig. vc and org 1919]; Christmastide, fantasia, op.34, 1920; Rhapsody, op.38, 1922; Wedding March, op.40, 1923; 3 Preludes on Anglican Chants, op.42, 1925; Voluntary, left hand, pedals, D♭, op.43, 1925; Processional, op.44, 1926; 3 Short Pieces, op.45, 1926–7; In exitu Israel, voluntary, op.46, 1928; Toccata, op.49, 1929; Lullaby, op.50, 1930; Prelude, Larghetto and Finale, op.51, 1931; 2 Preludes on Old English Psalm Tunes, op.52, 1931–2; 2 Meditations, op.57, 1935; 8 Pieces, op.58, 1935; Quiet Voluntary, op.70, 1946; Complete Works for Organ Solo, 6 vols (London, 1991) [incl. all of the preceding]

JEREMY DIBBLE

**Harwood, Elizabeth (Jean)** (*b* Kettering, 27 May 1938; *d* Fryerning, Essex, 21 June 1990). English soprano. After studying in Manchester, in 1960 she won the Kathleen Ferrier Memorial Prize, and made her début as Second Boy (*Die Zauberflöte*) at Glyndebourne, where she later sang Fiordiligi, Countess Almaviva and the Marschallin. In 1961 she joined Sadler's Wells, where her roles included Susanna, Konstanze, Adèle (*Le comte Ory*), Zerbinetta and Massenet's Manon. In 1963 she toured Australia, singing Lucia, Adina and Amina. She made her Covent Garden début in 1967 as the Fiakermilli, returning for Marzelline, Gilda, Bella (*The Midsummer Marriage*), Norina, Donna Elvira and Teresa (*Benvenuto Cellini*). For Scottish Opera (1967–74) she sang Fiordiligi, Sophie and Lucia. After Karajan heard her at Aix-en-Provence, in 1970 she was invited to Salzburg, where she sang Konstanze, Fiordiligi, Countess Almaviva and Donna Elvira. She also appeared at La Scala (1972) and the Metropolitan (1975). Her voice, capable of both brilliant coloratura and lyrical warmth, was used with elegance, complemented by a charming stage presence. Her recorded legacy includes Hanna Glawari (*Die lustige Witwe*) and Musetta under Karajan, Britten's Titania under the composer, Bella, Schumann's *Szenen aus Goethes Faust* and *Messiah*, and an important video of her Violetta in *La Traviata* (BBC production).

ALAN BLYTH

**Harwood, Ian** (*b* Petersfield, 29 Aug 1931). English maker of lutes and viols, lutenist and singer. He received his early musical training as a chorister at Winchester Cathedral, and was later an alto at St Albans Cathedral, New College, Oxford, and Ely Cathedral. He also studied aircraft design (graduate of the Royal Aeronautical Society, 1953). He made his first lute in 1956 and studied with Diana Poulton; in 1958 he set up as an instrument maker in Oxford, then moved in 1960 to Ely, where he was soon joined by John Isaacs, his partner until 1972. He made his début as a professional lutenist in 1960, when he demonstrated as a performer the musical effect of the lighter construction and low-tension stringing which he advocated as a maker. In 1964 he received the Tovey Prize for his research into the sources of English lute music. He founded the Campian Consort in 1967, performing and recording much 16th- and 17th-century music with it and other ensembles. An active teacher of lute playing and construction, he was a founder-member of the Lute Society and edited its journal (1965–70). In 1974 he began making 16th-century-type viols. He ceased musical instrument making in 1984, at the same time retiring from the spheres of research and performance. However, following his election as president of the Lute Society in 1998 as successor to the late Robert Spencer he has returned to the field of musical research. His work has exercised an extensive influence on British lute making and playing, causing younger lutenists to reject those of the elements of construction and playing technique based on the guitar that were cultivated by some noted earlier modern builders and performers. His pioneer work in the revival of the Renaissance viol has had a similar influence on an entire school of British makers.

HOWARD SCHOTT/R

**Harzanish.** Sign indicating a melodic formula in Armenian EKPHONETIC NOTATION.

**Harzebsky, Adam.** *See* JARZĘBSKI, ADAM.

**Ḥasan ibn Aḥmad** [al-Kātib], **al-** (*fl* ?late 10th century/early 11th century). Arab theorist. From the evidence of the one of his two treatises on music to have survived, the *Kamāl adab al-ghinā'* ('Perfection of musical knowledge'), he would appear to have been born in the 10th century. He may have been active in northern Mesopotamia, but nothing is known about his life. His professional title al-Kātib (chancery secretary) suggests that he was a man of wide culture and accomplishments, but he remained sufficiently inconspicuous to be overlooked by standard bio-bibliographical sources.

The *Kamāl adab al-ghinā'* draws upon the existing philosophical tradition, with material from al-Kindī and al-Sarakhsī, a pupil of al-Kindī whose works have not survived, and above all quoting extensively from AL-FĀRĀBĪ. Its major contribution is, however, less on the analytical or speculative side than on the descriptive, and it pays particular attention to vocal characteristics and the qualities required in a singer. It touches on vocal training and care of the voice, audience response, aspects of composition and the aesthetic dimensions of text-setting, and it also provides lists of the technical terms used by musicians for vocal and instrumental techniques.

WORKS

*Kamāl adab al-ghinā'* [Perfection of musical knowledge]; Fr. trans. as *La perfection des connaissances*, A. Shiloah (Paris, 1972); ed. Z. Yūsuf in *al-Mawrid*, ii/2 (1973), 101–54; ed. G. Khashaba (Cairo, 1975)

OWEN WRIGHT

**Hasard, John** (*fl* London, 1622; *d* *c*1640). English harpsichord maker. He was possibly the father-in-law of the virginal maker Gabriel Townsend. Over the years, a number of researchers have attempted to decipher the inscription in black and yellow paint which appears on the nameboard of the second oldest surviving authenticated English harpsichord (dated 1622) at Knole, Kent. That part of the inscription which is quite clear reads: 'JOHANNES .A.ARD FECIT LONDINI MDCXXII'. Since 1860, when Rimbault first suggested 'Asard' as the surname, others have come forward with 'Hayward', 'Haward', 'Iasard' and 'Izzard' as possibilities, of which 'Haward' seemed the most likely since the existence of a maker with that name was already confirmed. In 1978, however, Ann and Peter McTaggart demonstrated clearly that the name was 'Hasard'. It has not been possible to establish anything further about John Hasard other than a fleeting reference to a man with this name (or Hazard) of the parish of St Bartholomew-by-the-Exchange, and a passage in Ashbee, iv, 207 which reads as follows: 'Paid to Hazard that keepeth her graces virginalls in tune for his stipend for the qrter ending at xpemas 1612: 10s'. It seems likely that this refers to the maker of the Knole harpsichord.

CHARLES MOULD

**Hase, Georg.** *See* HASZ, GEORG.

**Hase** [Haase], **Wolfgang** (*b* Quedlinburg, Saxe-Anhalt, bap. 2 June 1611; *d* Sülzhayn, Harz Mountains, 31 July 1673). German theologian and writer on music. He was educated in the schools of Quedlinburg, including the Lateinschule, where he studied with Henricus Baryphonus. A scholarship from the town enabled him to enrol at the University of Helmstedt, where he spent three years studying theology. In 1634 he became Kantor at Schwanebeck (south of Helmstedt), thus beginning a long career as Kantor and minister in a number of Protestant churches in the Harz Mountains region, including periods as Kantor at Einbeck (1635–43) and Osterode (1643–4), rector and later vicar at St Alexandri, Einbeck (1644–57) – from 1647 he was simultaneously pastor at neighbouring Negenborn (Holzminden) – and finally as pastor at Sülzhayn (see Liebminger for additional biographical details). He wrote his only known work, *Gründliche Einführung in die edle Music oder Singe Kunst* (Goslar, 2/1657), as a teaching manual for his pupils at Osterode, but he stated that it was also widely used in the schools of other small towns in the region. An earlier edition printed at Osterode in 1644 does not seem to survive. Hase's most important pedagogical innovation is the adoption of the seven-letter system for singing in place of the traditional six syllables of solmization. He also touched on various aspects of musical notation and gave interesting suggestions for the correct singing of plainsong that are of some importance to a study of vocal liturgical practices in Protestant churches in mid-17th-century Germany.

GEORGE J. BUELOW

**Haselbach, Josef** (*b* Gams, St Gallen, 14 June 1936). Swiss composer. He studied in Zürich simultaneously at the music academy and the university (where Kurt von Fischer was his musicology professor), and then with Klaus Huber at the Basle Musik-Akademie (1964–8). His first acknowledged works, two sets of Ungaretti songs, date from his student years, and contacts with the Schola Cantorum Basiliensis led to the composition of *Mironton* (1969). In 1975 he began teaching theory and composition at the Zürich Conservatory, where he wrote his first significant vocal works. After settling in Zollikon he became a close friend of the cellist Raffaele Altwegg, and their association led to a series of works: two string quintets, the *Abendlied* for cello solo and the cello concerto *Trema*, which explores multiple possibilities of vibration. Haselbach's is a music generally of soft sounds and fine nuances, as his titles often suggest, and of many-layeredness and poetic ambiguity. He was vice-president of the Swiss Musicians' Association, a member of the music commission of the Zürich Tonhalle-Gesellschaft, and a teacher of counterpoint at Zürich University from 1989. Shortly after, illness obliged him to give up all his activities, since when he has worked at smaller compositional projects.

WORKS
(*selective list; complete catalogue in CH-Zz*)

Stage: Moving Theatre I, 5 dancers, 2 fl, vn, tape, 1972–3; Tanzlied, flamenco dancer, vn, 3 va, 1977–8; Quadrature, ballet for TV, 1979

Orch: Transtuli, large orch, 1969–70; Trema, vc, wind, perc, pf, 1976–7; Prélude, 1979; Sinfonietta, str orch, 1981; Nocturne, orch, 1982; Conc., vib, pf, chbr orch, 1983; Sinfonia concertante, cl, sax, tpt, str orch, 1985; '... und vertreut Gedichte ...', wind, perc, str, 1986; Hegareske, 1986; Anima di bronzo, 1988; Leporellos Traum, 1989

Chbr: Mironton, 2 b viol, 1969; Trio, fl, ob, bn, 1971; Fragen an die Nacht, 2 vn, 2 va, vc, 1975; Licht und Schatten, 2 vn, va, 2 vc, 1978–80; Liederseelen, 2 vc, 1979; Sommer-Sonant, va, pf, 1980–81; Tönungen II, 7 tpt, fl, cl, hn, str qt, 1981; Paraphrases, hn, pf, 1985; Vorschatten, cl, va, hp, 1988

Vocal: Chiaroscuro (G. Ungaretti), S, orch, 1967; Nach 10 (X. Gwerder), Bar, 1972; Voce mea – so stammle denn!, chorus, 1974; Ode an Zürich (E. Gomringer, Haselbach, K. Marti), chorus, 1977; Cant. no.1 'Ausbruch und Einkehr' (Marti, Haselbach), Bar, 2 choirs, brass, perc, 1978; Cant. no.2 'Büchner-Kantate' (G. Büchner), S, speaking choir, choir, orch, 1977–80; Neige, choir, 1987; 3 Lieder (K. Sallenbach), Bar, pf, 1987; Monodien, T, hp, str, 1987; L'été dernier (J.-D. Humbert), choir, org, 1987; A-Mor(S) I, S, chorus, orch, 1989

Kbd: 'Piano, piano ...!', pf, 1976; Kreuz-Xeichen, 2 org, 1978; Méditations, org, 1986

Other solo inst: Abendlied, vc, 1977; Abendlied, ob, 1983

Principal publisher: Hug

THOMAS GARTMANN

**Haselböck, Hans** (*b* Nesselstauden, 26 July 1928). Austrian organist, composer and musicologist. From 1947 to 1952 he studied musicology, German and classics at the University of Vienna and received the DPhil in 1953 with a dissertation on Wagner. From 1948 to 1953 he studied the organ and improvisation under Walter Pach at the Conservatory and Music Academy in Vienna. He then became organist at the Dominikanerkirche in Vienna. In 1958, 1959 and 1960 he won first prize at the International Organ Competition in Haarlem. Haselböck began teaching the organ and improvisation at the Vienna Music Academy (later the Hochschule für Musik) in 1960, and was director of the department of church music 1965–87, and vice-rector, 1985–90. He has made regular concert appearances in most European countries, the USA, Egypt and the Lebanon, and has been a member of the jury at international organ competitions. Most of his compositions are liturgical; his *Salzburger Messe* (1966) and the radio montage *Kreuzweg 70* (1969) have won prizes. He has given seminars and broadcasts and made records, often in connection with organ improvisation, and he also specializes in Austrian music. He has written numerous articles and essays on organ construction and performing technique for Austrian and German music journals, and has edited organ music by Bruckner, Kerll and Sechter.

WRITINGS

*Die dichterische Entwicklung des jungen Richard Wagner* (diss., U. of Vienna, 1953)
*Barocker Orgelschatz in Niederösterreich* (Vienna, 1972)
*Von der Orgel und der musica sacra: historische-kritische Beiträge zu Fragen von Orgelbau, Orgelkomposition und neuer Kirchenmusik* (Vienna, 1988)

GERHARD WIENKE

**Haselböck, Martin** (*b* Vienna, 23 Nov 1954). Austrian organist and conductor, son of Hans Haselböck. He studied the organ, the harpsichord and composition at the Musikhochschule in Vienna, and continued his organ studies with Jean Langlais and Daniel Roth in Paris. In 1972 he won first prize in the Vienna-Melk international organ competition, and the following year made his professional début as an organist, in the Konzerthaus, Vienna. Haselböck was appointed organist of the Augustinerkirche in Vienna in 1976, and of the Vienna Hofkapelle in 1977, the year he was also appointed assistant professor of organ at Luther College, Iowa. He became a professor at the Vienna Musikhochschule in 1979 and professor of organ at the Musikhochschule in Lübeck in 1986. In the early 1980s he began to develop a parallel career as a conductor, and in 1985 he founded his own period-instrument orchestra, the Wiener Akademie, with which he has made numerous tours and recorded works by Biber, Bach, Telemann, Vivaldi, Haydn, Mozart and Schubert. He has also appeared as a guest conductor with the Vienna SO, the MDR SO, Leipzig, the Northern Sinfonia, the Zürich Opera Orchestra, the Hungarian National PO and other orchestras. His operatic experiences include performances at the Prague Mozart Festival. As an organist he has performed with the Vienna PO, the Berlin PO and other leading orchestras, and has given recital tours and masterclasses throughout the world. Among his premières are concertos by Krenek (who dedicated both his organ concertos to Haselböck), Albright, Cristóbal Halffter, Peter Kiesewetter and Rainer Bischof (likewise dedicated to him) and solo works by Krenek, Schnittke (including another dedication, *Schnell und hell*), Ligeti, Feldman and others. His discography includes the complete organ works of Bach, Liszt and Schoenberg. Haselböck has published many articles on organ music and edited the complete organ works of Mozart and Liszt.

RICHARD WIGMORE

**Hasenknopf, Sebastian** (*b* ?*c*1545; *d* after 1597). Austrian composer. His early years were spent in the city or principality of Salzburg. In 1556 he became a boy chorister at Salzburg Cathedral, where he was made a part-time singer in 1561 and a *Choralsänger* in 1564. He was converted to Lutheranism before 1589, for in that year he applied unsuccessfully for posts at the Lutheran schools of Linz, Upper Austria, and Graz. He composed several five- and six-voice *cantiones* specifically for the latter application. He was employed in the court chapel at Innsbruck in 1590, but was unable to secure a permanent position there. However, he maintained connections with Salzburg: he dedicated his *Sacrae cantiones* (1588) to two members of the wealthy mining family, the Weitmosers, and an eight-voice mass (1590) and two *cantiones* (1593) to the abbot of the Benedictine monastery of St Peter in Salzburg. By 1597 he was appointed schoolmaster and organist at Goldegg im Pongau (in the principality of Salzburg). Apart from 23 pieces in organ tablature (in *D-Mbs* 259 Ps 115) Hasenknopf's works comprise 27 psalm settings, hymns, a gospel setting and a Whitsuntide sequence, all of which were published in the *Sacrae cantiones quinque, sex, octo et plurium vocum, tum viva voce, tum omnis generis instrumentis cantatu commodissime* (Munich, 1588).

OTHMAR WESSELY/WALTER KREYSZIG

**Hasidism.** A Jewish tradition that originated in the 18th century in Eastern Europe. *See* JEWISH MUSIC, §III, 3(iii).

**Haskil, Clara** (*b* Bucharest, 7 Jan 1895; *d* Brussels, 7 Dec 1960). Romanian pianist. Of Sephardi background, she displayed astonishing gifts at an early age, entering the Bucharest Conservatory in 1901 and beginning studies with Richard Robert (whose students included Serkin and Szell) the following year. At the age of ten she entered the Paris Conservatoire, officially to study with Cortot though more often working with Lazare-Lévy and Mme Giraud-Letarse. At 15 she was awarded the *premier prix*, playing before a jury consisting of Fauré, Moszkowski, Raoul Pugno and Ricardo Viñes. Busoni heard her perform his own arrangement of Bach's Chaconne at a Zürich recital in 1911. Just as recognition as one of the most remarkable young pianists of her time seemed assured, however, she was hospitalized for four years with curvature of the spine. Haskil later resumed her career, playing recitals in New York in 1924 and Manchester in 1926. She gave five performances of the Schumann Concerto with the Philadelphia Orchestra under Stokowski and in 1933 gave an outstanding performance of Brahms's Second Concerto. In 1941 the German invasion forced her to flee Paris. She

*Clara Haskil*

courageously continued her career after another operation, for a tumour on her optic nerve, and in 1951, at the age of 56, she made her Wigmore Hall début and gave a series of recitals for the BBC. In 1957 she was made a Chevalier of the Legion d'Honneur in belated recognition of the inimitable clarity and eloquence of her playing. Particularly admired by Lipatti, Enescu, Stokowski, Cortot and Giulini, she excelled above all in Mozart, Beethoven and Schubert. She made memorable recordings of the complete Beethoven sonatas for violin and piano with Grumiaux as well as of several Mozart concertos which, in their sensitivity and profound simplicity, have rarely been equalled. Haskil was, as one critic wrote, a pianist 'who observed the smallest detail in the music without drawing attention to it'. Ill-fated to the last, she died in 1960 after failing to recover from a fall at a railway station, just before she was due to give a recital with Grumiaux. (J. Spycket: *Clara Haskil*, Lausanne, 1975)

BRYCE MORRISON

**Haslemere Festival.** Annual English music festival devoted to the performance of early music, founded by Arnold Dolmetsch in 1925. *See under* DOLMETSCH family.

**Haslinger.** Austrian firm of music publishers.

1. History. 2. Publications.

1. HISTORY. The firm was founded as the Chemische Druckerey in Josefstadt, Vienna, on 27 July 1803 by Alois Senefelder (1771–1834), who chose the bookshop of Peter Rehm's widow as his sales outlet. As early as 7 December 1803 he transferred his outlet to the firm of Franz Grund 'beim rothen Apfel'. The very early publications bore the imprint 'A. Senefelder' and later 'Singerstr. Nr.932 à la pome rouge', which was retained after Senefelder transferred his privilege to Sigmund Anton Steiner (*b* Lower Austria, 26 April 1773; *d* Vienna, 28 March 1838). On 23 October 1805 the firm moved into premises at Graben, Paternostergässchen 612, where it remained until 1835. Between 1809 and 1812 Rochus Krasnitzky was a joint proprietor; until 1815 Steiner was again sole proprietor, trading from 6 April 1815 as K.k. priv. Kunst- und Musikalienhandlung des S.A. Steiner, and then going into partnership (14 August 1815) with his employee Tobias Haslinger (*b* Zell, 1 March 1787; *d* Vienna, 18 June 1842), as S.A. Steiner & Co. Haslinger took over the firm in his own name on 2 May 1826 and in 1832 acquired the Mollo publishing business; on 16 September 1835 the firm moved into premises in the Trattnerhof. After his death in 1842 the firm was known as Tobias Haslingers Witwe und Sohn until 19 April 1848, when it became Carl Haslinger quondam Tobias (Caroline Haslinger had died on 24 March 1848). Carl Haslinger (*b* 11 June 1816) died on 26 December 1868; his widow Josephine carried on the still considerable publishing and retail business until 1875 when she sold the publishing business to Robert Lienau (A.M. Schlesinger) in Berlin.

2. PUBLICATIONS. Steiner, who took over the Chemische Druckerey shortly after Senefelder founded it, was licensed as a music dealer by the municipal authorities in 1806. The publications of the firm of Franz Anton Hoffmeister were transferred to the Chemische Druckerey in 1807. After being made a freeman of the city in 1810, Steiner was elected president of the art, book and music dealers' corporation in 1812 and licensed as an art dealer in 1813. During the partnership with Haslinger, Anton Diabelli was employed as a proofreader. Probably at Haslinger's instigation, Steiner gave up his lithographic printing licences on 7 July 1821 and part of the lithographic production was transferred to the Lithographisches Institut. The publishing rights of the K.k. Hoftheater-Musik-Verlag were acquired in 1822 and those of Josef Riedl as the successor to the Bureau des Arts et d'Industrie in May 1823.

The firm's dealings with the composers it published in this period included a paternalistic relationship with Beethoven, reflected in the entertaining correspondence with him between 1 February 1815 and 11 November 1826. The Chemische Druckerey catalogue covered a wide variety of works by all the composers then living and working in Vienna; of the great masters, however, only Mozart was represented, and then merely by a pirated edition of the Breitkopf *Oeuvres complettes*, the first edition of the parts of the Requiem, and (still in Senefelder's time) an early vocal score of *La clemenza di Tito*. Standards rose with the acquisition of the publishing house of F.A. Hoffmeister and especially after Tobias Haslinger joined the firm; he contributed greatly to its later rise in fortune by replacing the rather poor finish of lithographic printing with clear music engraving and by his dual talent for music and business.

Haslinger's partnership with S.A. Steiner (1815–26) brought the firm a worldwide reputation; he was responsible for the handsome edition of Beethoven's collected works (62 volumes), which the copyist Mathias Schwarz prepared on English vellum between 1817 and 1823; it was finally bought by Archduke Rudolph of Austria and bequeathed with his library to the Vienna Gesellschaft der Musikfreunde.

A notice in the *Wiener Zeitung* of 11 May 1805 lists the firm's publications to date and gives plate numbers from 1 to 134. A catalogue of publications to plate no.1881, published on 1 April 1812 (now in *A-Wst*), provides a complete record of production to that date; another notice dated 8 August 1812 contains a supplement up to plate no.1967. This is followed by six inventories printed as supplements, again with details of plate numbers, the first under 'Chemische Druckerey und S.A. Steiner' and the rest under 'S.A. Steiner & Co.'. This tradition was carried on by means of supplements or by listing publications on the last page of works. In 1817–24 the firm published its own periodical, the *Allgemeine musikalische Zeitung mit besonderen Rücksicht auf den österreichischen Kaiserstaat*. The printing process improved from 1819 and achieved an outstanding quality about 1826.

The firm's most important publications were the first editions of Beethoven's opp.90–101, 112–18 and 121*a* (brought out by S.A. Steiner & Co.) and important editions of his works taken over from the Bureau des Arts et d'Industrie and the K.k. Hoftheater-Musik-Verlag. Mozart is represented by an edition of *Sämmtliche Werke für das Clavier mit und ohne Begleitung* in 38 volumes, and numerous works were published by other leading composers of the time including Czerny, Anton Diabelli, Eybler, Hummel, Isouard, Krommer, Mayseder, Moscheles, Onslow, Hieronymus Payer, J.P. Pixis, Riotte, Rossini, Spohr, Maximilian Stadler and Weber; many of these were also published later by Haslinger. The firm ran several popular series: Kirchenmusik fürs Land, Musée musical des clavecinistes, Musica sacra, Sammlung komischer Theatergesänge, Thalia für das Pianoforte and Theater-Journal für Gesang und Pianoforte (with opera music). Even in Steiner's day the large-scale production of light music was necessarily the firm's source of financial security; opportunity was provided by the demand for dance music at Carnival time.

On 2 May 1826 Steiner handed over the publishing firm to his partner Tobias Haslinger but remained president of the dealers' corporation until 1837. At the time of the change-over, production stood at plate no.4747. Haslinger was a cathedral chorister at Linz under the Kapellmeister F. Glöggl and also worked in his music shop. Subsequently he directed the music department in F.E. Eurich's book and art dealer's shop. In 1810 he went to Vienna and initially worked in Katharina Gräffer's bookshop; he became known by publishing his own compositions. Under Haslinger's direction the business assumed larger dimensions. His initiative led to music printing of an exceptionally high standard, particularly evident in the many surviving de luxe editions. The business had up to 50 employees, its own music engraving establishment and a copperplate printing office with 14 presses. Haslinger's success was due to his amiable disposition, enormous industry and a marked business acumen which was, however, totally scrupulous. In 1830 he was made imperial and royal court art and music dealer, and later an honorary freeman of the city of Vienna and an honorary member of the Swedish Royal Academy of Music. The firm published his portrait in 1842.

The plan for a complete Beethoven edition, which Steiner drew up with other firms in 1810, could not be implemented for some time; this was one reason for the rift between the firm and Beethoven. In 1828 Haslinger embarked on a complete edition which reached 73 volumes in 1845. The firm published the first editions of Schubert's opp.77–83 and 89–91 (starting with the *Valses nobles* on 22 January 1827), the *Grätzer Galopp*, the quartets *Grab und Mond*, *Wein und Liebe* and, posthumously, *Schwanengesang*. Numerous composers were added to those already listed in S.A. Steiner & Co.'s catalogue, including Chopin, Gänsbacher, Handel (*Jephtha*), Carl Haslinger, Franz Lachner, the elder Adolf Müller, Bernhard Romberg, Schumann, Seyfried and Sigismond Thalberg. Attempts at complete editions of J.S. Bach and Domenico Scarlatti both foundered at an early stage. The popular series included Musikalische Blumengalerie, Flore theatrale for two and four hands, Sammlung der Galoppen, Moser's Weiner Local-Gesänge, Neuigkeiten für das Pianoforte and Musikalische Theaterbibliothek für die Jugend. Again dance music maintained the firm's stability; Haslinger greatly encouraged its leading exponents, publishing almost all the works of the elder Johann Strauss in up to ten different arrangements as well as a complete edition in two series, and Joseph Lanner's works (previously published by Pietro Mechetti) from op.170. The firm's outstanding copperplate engravers lavished all their skill on the graphic design of the title-pages (see illustration).

Between 1842 and 1848, the six years after Haslinger's death, the firm's publication numbers ran from 9000 to 11,007. Carl Haslinger, who was a pupil of Czerny and Seyfried, became known as the composer of over 100 works, though of minor importance. Under his direction the firm's publishing and production standards fell

*Title-page of the younger Johann Strauss's 'Tritsch-Tratsch-Polka' op.214 (Vienna: Carl Haslinger quondam Tobias, 1858)*

considerably; arrangements and fashionable items predominated. Only the dance publications remained successful: the firm published opp.95–278 of the younger Johann Strauss but his works from op.279 were lost to C.A. Spina. At the same time Haslinger also lost Josef Strauss, whose works he had published up to op.150; he acquired C.M. Ziehrer as a replacement, publishing his works up to op.209, and then Josef Kaulich. Nevertheless, through its management of midday and evening concerts, the firm remained a focal point of society. When it was sold to Lienau (1875) the final publication number was 15,170.

ALEXANDER WEINMANN

**Haslmayr, Adam** (*b c*1550; *d* ?Wattens, Tyrol, after 1616). Tyrolean composer, probably of upper Austrian origin. According to his own account, he studied with the French scholar and cathedral organist Andreas Casletanus in Bressanone. In a document of 1587, Haslmayr refers to himself as citizen and organist of Bolzano. After serving as schoolmaster at St Pauls, Alto Adige, he was appointed schoolmaster and choirmaster of the principal parish church in Bolzano on 23 March 1588. He was dismissed from this post at the beginning of 1604 because of mental disorder. After unsuccessful attempts to regain his old position in 1605, he was recommended by Archduke Maximilian for a vacancy as a singer in the convent at Hall in the Tyrol, although it was only in about 1611 that he served in a musical capacity at the convent. He moved to Schwaz in the Tyrol in 1612 and was actively engaged in mining; he then settled in Heiligkreuz near Hall as a notary. He was closely connected with Rosicrucianism and by 1602 his relations with the Catholic church had become precarious. In 1612, suspected of Calvinism, he was imprisoned in Innsbruck and sentenced to go to Genoa to work in the galleys. He was released from internment in 1617. He may perhaps have spent his final years in Wattens with his son Adam (*d* 1666).

Haslmayr was active as a theologian, lawyer, alchemist and inventor. His vehement debates on medicine with the physician Hippolytus Guarinoni (1571–1654) show that he was a progressive natural scientist, but his work in this field was prejudiced by his interest in the occult sciences. He was an imaginative composer, but completely abandoned the practice of music in 1603 in order to devote his time to the study of theology, philosophy and medicine. His works comprise 12 settings of German psalm paraphrases by Casletanus and five secular songs, of which the *Totentanzlied, O sterblicher Mensch* is noteworthy. In his sacred works, Haslmayr used *cori spezzati* techniques. All his extant compositions are found in a single publication entitled *Newe teütsche Gesang, mit vier, fünff, und sechs Stimmen* (Augsburg, 1592).

OTHMAR WESSELY/WALTER KREYSZIG

**Hasoserah.** *See* HATZOTZEROT.

**Hasprois** [Asproys, de Haspre, de Haspra, de Aspre, Haprose], **Johannes Symonis** [Jehan Simon] (*fl* 1378–1428). French composer. A native of Arras, he was at the Portuguese royal court in 1378, in the service of King Charles V of France in 1380, and 'petit vicaire' at Cambrai Cathedral in 1384. He obtained a rectorate at the parish church of Liessies, Cambrai, probably in 1388, but abandoned this benefice between August 1390 and 1393. He was in the papal chapel at Avignon, under Clement VII and Benedict XIII, from before 1393 until 1403; however, his enrolment as chaplain in the private chapel probably took place earlier, since in the registers his name always precedes that of Johannes de Bosco (*see* BOSQUET), who was certainly a member in 1391. He may have been the 'magister Johannes Symonis' who in 1417, during the Council of Konstanz, wrote an astrological essay (see Tomasello). He served in the curia as apostolic notary until his death in 1428, and held benefices in Rozoy and Arras and at Cambrai Cathedral.

Hasprois is represented by only four works in four manuscripts. The early two-voice ballade *Puisque je sui fumeux*, with its many syncopations and skilfully shaped final climax, is a prime example of the exceedingly complex style of the Ars Subtilior. The phrase 'Jo Simon de haspre composuit dictum. Ja. de Noyon' is copied immediately after the text in the source (*F-CH* 564). The text survives also anonymously as *Balade de maistre fumeux*, though it is probably not by 'Ja. de Noyon' as Apel (in contrast to Reaney in *MGG1*) supposed. Like a similar rondeau by Solage, this ballade seems to have been written for the highly eccentric circle of men associated with Jean Fumée, as described in Deschamps' *Charte des fumeux* (1368); Hasprois could have been a member of this society while working for Charles V. The other two ballades are typical of the love-lyric around 1400; *Ma doulce amour*, well known from *F-CH* 564, *I-MOe* α.M.5.24 and *GB-Ob* Can.misc.213, is more complicated than the somewhat syllabic *Se mes deux yeux* (Can.misc.213). Only the incomplete rondeau refrain from *I-Bc* Q15 with two texted parts and textless tenor shows the somewhat simpler style of the early 15th century. Reaney (1969) identified three anonymous compositions (in *GB-Ob* 213) as being in a style close to that of Hasprois' known works. Günther (1975) suggested that two chansons from the Leiden fragments (ed. in MMN, xv, pp.46, 51; see Biezen and Gumbert, 1985) might have been written by Hasprois because his name is mentioned in their texts. Both pieces have the same words

to the same rhythm in all three voices. The drinking-song *Ho, ho, ho* particularly, with its regular two-bar motifs and imitation, seems either to be in the style of the early 15th century or to testify to the existence of simpler 'lateral traditions' (*StrohmR*, 70) parallel to the Ars Subtilior.

URSULA GÜNTHER

**Hass** [Haas, Hasse, Hase, Hasch]. German family of harpsichord, clavichord (and organ?) makers. Hieronymus Albrecht Haas (*b* Hamburg, bap. 1 Dec 1689; bur. Hamburg, 19 June 1752) received Hamburg citizenship on 2 October 1711. In 1713, at the time of the birth of his son, he was described as *Instrumentenmacher* and *Clavirmacher*. Chamberlain's accounts from Plön dating from 1744 record the delivery by Hieronymus Albrecht of a 'Clavicimbel' for Duke Friedrich Carl von Plön. This instrument was probably one of his last; the latest known instruments by him, two unfretted clavichords, are dated the same year (Boalch, 3/1995, pp.369–70).

Johann [Johan] Adolph [Rudolph] Hass (*b* Hamburg, bap. 12 March 1713; bur. Hamburg, 29 May 1771), son of Hieronymus Albrecht, received his citizenship on 28 October 1746. On 12 October 1747 he became a member of the city chamber of commerce. His seventh child, Margaretha Catharina, married the instrument maker Johann Christoffer [Christopher] Krogmann (1748–1816), who may have succeeded to his father-in-law's business. Krogmann built pianos in the English style.

The Hass family was not mentioned in published sources until the second half of the 18th century, when Adlung (1758) described 'Hasse in Hamburg' as the maker of a 'cembal d'amour'. Burney (1773) mentioned 'Hasse, father and son, both dead' among the well-known German organ builders, adding that 'their *Flügel* and *Claviere* are much sought after'.

Dietrich [Dieterich] Christopher Hass [Hase, Haase, Haas] (1731–after 1795), a musician (and instrument maker?), was a member of an old Hamburg family of civic musicians (his father Christian Hase (1697–1765) was *Musikdirektor* in Hamburg, 1725–65), apparently unrelated to that of Hieronymus Albrecht. The only extant instrument by him, a clavichord dated 1796 (Museum für Kunst und Gewerbe, Hamburg), is thought by some to be an instrument by Johann Adolph, repaired and re-signed by Dietrich Christopher (Schröder and Boalch, 3/1995). D.C. Hass is neither listed as a musician nor as an instrument maker in the Hamburger Adress-Büchern.

An assessment of the work of the Hass family can be based on Russell's view (2/1973) that the 'extent and quality of their surviving work must place them first in German instrument making' and Hubbard's comment that of all their instruments 'only one has what could be regarded as a normal disposition'. Burney implied that they also made organs, and Russell's idea that all their harpsichords may have been made to special order is not unlikely. It is a gross oversimplification to see Hieronymus Albrecht's harpsichords, as Hubbard did, as 'the grotesque result of the barbarous imposition of tonal concepts appropriate to the organ'.

As a harpsichord made by Christian Zell in 1728 shows (*see* HARPSICHORD, fig.13), Hamburg builders had established their own style of decoration, construction and (probably) sound by the 1720s. Several Hass instruments show an attempt to develop the potential of the harpsichord. That of 1721 (Göteborg) is 2·58 metres long, that of 1723 (Copenhagen) has four sets of strings (8′, 8′, 8′, 4′, *F*′ to *c*‴) and a sliding lower manual for coupling, several have a 16′ row (including one made in 1734) and even a 2′ for the lower half or so of the lower manual. Their scale is similar to that of English harpsichords (though the bass of the 4′ is normally longer), their plucking points to French instruments. Stop levers are usually placed on the wrest plank, so that the player has to reach over the nameboard; decoration usually incorporates many techniques, e.g. lacquered and oil-painted casework, tempera-painted soundboard, olive wood, ivory, mother-of-pearl and tortoiseshell veneers or plates for various details, the latter more especially on clavichords. The largest harpsichord known to have been made before the 20th century was built by H.A. Hass in 1740, with three manuals, five sets of strings (16′, 8′, 8′, 4′, 2′), six rows of jacks (including a lute stop), harp for the 16′ row, and coupling devices. What it was built to play is uncertain.

Apart from a harpsichord, J.A. Hass's known instruments are clavichords, rarely fretted, often long, large, brass-strung instruments, with a compass of *C* to *d*‴ or *F*′ to (*d*‴) *f*‴; some have 4′ strings in the bass (which were not admired by C.P.E. Bach; *see* FRIEDERICI), and at least one with strings of 8′, 8′, 8′, in the treble, 8′, 8′, 4′, in the bass to *c*′. It was large instruments such as these that so many later 18th-century German composers had in mind,

with good *Bebung* effects, discreet volume and a fairly bright tone. For details of surviving Hass instruments see Boalch (3/1995).

For illustration of a clavichord by J.A. Hass, *see* CLAVICHORD, fig.10.

DONALD HOWARD BOALCH/PETER WILLIAMS, ALEXANDER PILIPCZUK

**Hass, Georg.** *See* HASZ, GEORG.

**Hass, Peter.** *See* HASSE family, introduction and (1).

**Hasse** [Hesse, Hassen, Hass]. Many German musicians, active primarily as organists, and in a few cases as composers, throughout the 17th and 18th centuries, bore this surname or one of its variants. There is no evidence that they were all related – there are doubts, for example, about such men as Andreas Hasse, organist and organ builder at Greiz, Vogtland about 1688; Peter Hass, organist at Travemünde, near Lübeck, from 1687 to 1732, who was succeeded by his son Peter (*d* 1737); and Johann Ludwig Hasse, Kantor at the Marienkirche, Rostock, until his death in 1795 – but several of them certainly belonged to one important north German family, of which there were two main branches. The longer-established line was centred on Lübeck from 1600 onwards. Its most notable members were those discussed at (1) and (2) below. The former was thrice married and had four other sons, three of whom were musicians: Esajas assisted, and in 1671 succeeded, Johannes Buxtehude (father of Dietrich) at the Olaikirche in Helsingør, Denmark; Hinrich (*c*1630–1696) was organist at the Petrikirche in Lübeck from 1650; and Friedrich Hasse (i) worked in Neuengamme from 1660 until 1672, when he moved to Bergedorf, near Hamburg, establishing there the second branch, which culminated in by far the most important member of the entire family, (3) Johann Adolf Hasse. At Bergedorf Friedrich was organist of St Petri und Pauli, a post inherited by Johann Adolf's father, Peter (iii) (*b c*1668; *d* Bergedorf, 6 Oct 1737) and then by his brother Johann Peter (1708–76). Apart from the family members discussed below, Hinrich's son Peter Hasse (ii) (*b* Lübeck, bap. 18 Feb 1659; *d* Lübeck, 16 Oct 1708), organist of the Jakobikirche in Lübeck from 1686, is the only one by whom any music survives, in the form of an incomplete organ prelude (in *D-LEm*; ed. in Organum, iv/21, 1925).

Johannes, the eldest son of (1) Peter Hasse (i), was not an organist, but two of his daughters married into the Bruhns family of musicians. These, and other family connections, are documented in H. Fishback: 'The Organist Family Hasse', *American Organist*, xviii/8 (1984), 36–7.

**(1) Peter** [Petrus] **Hasse (i)** (*b* Franconia, ?*c*1585; *d* Lübeck, bur. 16 June 1640). Composer and organist, father of (2) Nikolaus Hasse. He stands at the head of the Lübeck line of the family. He is first heard of on his appointment at Easter 1616 to the coveted post of organist of the Marienkirche, Lübeck. Since his three surviving organ works are found in a manuscript collection alongside compositions by Sweelinck and his known pupils such as Andreas Düben, Jacob Praetorius (ii), Samuel and Gottfried Scheidt, Paul Siefert and Melchior Schildt, it is believed that he too was a pupil of Sweelinck at Amsterdam, from about 1606–9 onwards. In order to have obtained the post at Lübeck he may have been resident in the area beforehand. He held the post until his death. During this period he supervised a number of structural alterations to both of the organs at the Marienkirche and established himself as a teacher and performer; four of his sons were among his pupils. His variations on *Allein Gott in der Höh sei Ehr* reflect the early north German style of organ composition in their idiomatic use of the chorale melody as a readily perceived cantus firmus accompanied by a variety of contrapuntal devices, a piece often being divided into well-defined sections depending on the treatment of the subject. Hasse's two extant vocal works show the influence of the prevailing Venetian polychoral style in the rhythmic declamation of the text in association with homophonic concertato textures.

Praeambulum, *Bsb*; ed. in Organum, iv/21 (1925)

**(2) Nikolaus** [Nicolaus] **Hasse** (*b* Lübeck, *c*1617; *d* Rostock, ?8 March 1672). Composer and organist, eldest son of (1) Peter Hasse (i). He studied with his father, but other information about his early life is unclear, for there is little agreement among what is to hand in secondary biographical sources (see Hennings and Praetorius). In 1642 he became organist of the Marienkirche, Rostock, and held the post tenuously until 1671, when he seems to have retired. He appears always to have been in financially embarrassing circumstances.

Hasse has long been known as a composer of chamber music and sacred songs, but his organ music remained for a long time undiscovered. His chamber music is all contained in *Delitiae musicae* (1656), comprising 21 suites (allemande–courante–saraband) and 14 other dance movements; they were originally intended for use by the students of Rostock University. Hasse was the principal contributor of melodies (and possibly the harmonizations as well) to *Geistliche Seelen-Musik*, a collection of religious verse edited by HEINRICH MÜLLER. His 50 melodies are much more florid than the others in the volume and are consequently more akin to Italian arias than to simple German hymns. Most of his other vocal works are occasional pieces. His four surviving organ works, all of which are to be found in the Pelplin organ tablatures, illustrate the development of the north German organ style. In *Jesus Christus unser Heiland* ('pro Organo pleno') the chorale is presented in the soprano in the first verse, the tenor in the second and the bass in the third. There is no ornamental elaboration of the cantus firmus, which is presented in strict counterpoint throughout. In

*Allein Gott in der Höh sei Ehr* the chorale melody is treated much more imitatively; when it appears in the soprano it is often expanded by the use of decoration that in turn adds to the rhythmic movement of the setting. Ornamentation is used to an even greater extent in *Jesus Christus unser Heiland* (for two manuals and pedals) and in a manner similar to that adopted later by, for example, Buxtehude and Böhm. In its fantasia-like passages Hasse made particular use of echo devices and motivic imitation. Whereas ornamentation is here still confined to the soprano, in *Komm, Heiliger Geist, Herre Gott*, an impressive piece of some 292 bars, it extends to all the other voices except the pedals, which, with its periodic, undecorated statements of the various phrases of the cantus firmus, cogently supports the increased imitative counterpoint and motivic interplay in the upper voices and imparts unity to the work. Hasse here developed ideas and techniques that Tunder and Reincken incorporated more intensively into their chorale fantasias.

(3) **Johann Adolf** [Adolph] **Hasse** (*b* Bergedorf, nr Hamburg, bap. 25 March 1699; *d* Venice, 16 Dec 1783). Composer. For several decades he was the most widely admired composer of *opera seria* in Italy and German-speaking lands. His finest operas, written between the mid-1720s and the late 1760s, represent a highly systematized, rational style; they were handsomely produced and sung at leading theatres. Festival operas and vocal chamber works were composed for weddings and similar occasions at the Habsburg court in Vienna during the 1760s, by which time Hasse had come to be associated stylistically with the librettist Metastasio. Qualities described today as neo-classical also pervade his Dresden oratorios, his Venetian sacred works and his later flute music probably for Berlin; much of his music exhibits dramatic effects of harmony, orchestration and vocal line. He was able to compose at great speed, and his skill at adjusting to the voice of each singer was highly prized. Bel canto was for him always the *sine qua non* of great music, and to the beautiful display of the human voice all else was subordinated.

1. EARLY YEARS: GERMANY, NAPLES AND VENICE. Hasse was the second of five children of Peter Hasse (iii) and Christina Klessing, daughter of a mayor of Bergedorf. He studied in Hamburg, 1714–17, and in 1718 joined the Hamburg opera company as tenor, having been recommended by J.U. von König, with whom he had much contact in later years (König was Dresden court secretary and poet from 1720, and his son was opera impresario there and a court official). Hasse is said to have had a fine tenor voice and acting talent; he sang before the dauphine in Paris as late as 1750, but by 1755 he had lost his singing voice. His singing career was probably limited to his early years in Germany; he had a court post in Brunswick from 1719, performing in operas by Schürmann, F.B. Conti and Caldara, as well as his own *Antioco*, at least partly composed when he was in Hamburg and performed at Brunswick on 11 August 1721. Hasse's operatic singing in Hamburg has not been ascertained because the custom of citing singers' names in librettos did not begin there until 1721.

Shortly after the production of *Antioco* Hasse left Germany; according to his testimony in his marriage contract of June 1730, he had spent several months in Venice, Bologna, Florence and Rome before living six or seven years in Naples and a concluding half-year in Venice. He was converted to Roman Catholicism in Naples; his patron the Marquis Vargas Maccina may have been of influence in this. Another patron was Carlo Carmignano, a councillor at the Neapolitan court, at whose country estate Hasse's serenata *Antonio e Cleopatra* was given in 1725, sung by Carlo Broschi (Farinelli) and Vittoria Tesi. It earned him a commission at the S Bartolomeo opera house. Studies with Alessandro Scarlatti may also have advanced Hasse's career; Quantz, who visited Hasse in 1725, reported that Scarlatti had befriended him and was giving him lessons. Arias from Scarlatti's *La Griselda* reworked by Hasse (*I-Mc*) demonstrate his careful study of Scarlatti's music. Burney's

claim that Hasse was also a pupil of Porpora is less easily verified.

*Il Sesostrate*, given on 13 May 1726 and revived with revisions on 28 August, was the first of Hasse's seven serious operas within six years for S Bartolomeo. His rapid emergence as one of the busiest, most successful opera composers in Naples has few parallels in the 18th century. His eight intermezzos for the *buffo* singers at the Neapolitan court were extremely popular and were sung by other pairs of comedians throughout Italy and Germany. A full-length *opera buffa, La sorella amante*, his only work of the kind, was performed in spring 1729 at the Nuovo theatre. Almost nothing is known about two serenatas composed for Naples, *La Semele, o sia La richiesta fatale* (1726) and *Enea in Caonia* (1727). The circumstances that prompted Hasse to set texts from P.A. Rolli cantatas in the 1720s are also unknown; the pieces survive along with the reworked Scarlatti arias, suggesting that they may have been intended as exercises if not for private performance.

It has often been stated that Hasse visited Venice in 1727 or 1728, composed a *Miserere* for the women's chorus and orchestra of the Ospedale degli Incurabili and was appointed *maestro* there. No *Miserere* dated before 1730 has been found; besides, Porpora was *maestro di cappella* from 1726 until at least 1733, if not officially until 1738 (Baldauf-Berdes, B1993). Moreover, on 28 June 1728 and again on 15 February 1729 Hasse submitted a written appeal to the captain of the German guard, who served the court as inspector of the music of the royal chapel in Naples, to be appointed supernumerary *maestro di cappella*; his conversion to Roman Catholicism four years earlier is cited in his appeal. He was told that there were already four *maestri* and therefore none more was needed, but the viceroy, Cardinal Michael Johann Althann (from the Austrian nobility), overruled the captain to name Hasse supernumerary *maestro* the next day, 16 February (Cotticelli and Maione, B1993).

Hasse's first documented visit to Venice was during Carnival 1730 when his *Artaserse* was given at the S Giovanni Grisostomo theatre. The libretto was nominally by Metastasio; this may be regarded as Hasse's earliest encounter with a Metastasian text, though it had been altered by Giovanni Boldini. Only in 1760 did Hasse set Metastasio's original libretto. Farinelli, who performed in several of Hasse's operas, was particularly pleased with the *Artaserse* arias; he sang them in London on 27 October 1734 in a pasticcio, *Artaxerxes* (Burney mistakenly claimed that Hasse directed it). Two arias from Act 2, 'Per questo dolce amplesso' and 'Pallido il sole', to Boldini texts, were sung every evening for Philip V during the decade Farinelli served him (1737–46), and survive in countless copies; they may have been Hasse's most widely circulated arias.

2. Vienna and Dresden, 1730–33. In the libretto of *Artaserse* for the 1730 carnival season in Venice Hasse is called 'Maestro sopranumerario della Real Cappella di Napoli'; other librettos of 1732–3 repeat the information. But the librettos of *Dalisa* (Venice, May 1730), *Arminio* (Milan, August 1730) and *Ezio* (Naples, autumn 1730) identify him as 'Primo maestro di cappella di S.M. Re Augusto di Polonia ed Elettore di Sassonia'. Evidently he was granted use of the title of Kapellmeister at Dresden between the carnival season and Ascension, and therefore before his marriage on 20 July 1730 in Venice, though he did not set foot in Dresden until 6 or 7 July 1731. His wife, the soprano Faustina Bordoni, sang in *Dalisa* and *Arminio* but not in *Ezio*, having been contracted to perform in Riccardo Broschi's *Ezio* setting at Turin in December 1730. She may have joined Hasse early in 1731 in Vienna, where his oratorio *Daniello* was performed at court on 15 February. Because this oratorio survives in only one copy (*A-Wn*, in a Viennese hand and with a leather court binding) and because it has been attributed to Caldara by later observers (Allacci is the earliest) and shows in places considerable counterpoint, an ascription to Hasse has been questioned (Koch, F1989). On the other hand, a contrapuntal aria such as 'Bel piacer di tua grandezza', copied and performed as Hasse's by the early 19th-century Viennese collector Simon Molitor, may strengthen the assumption that, with this oratorio, Hasse attempted to satisfy a taste for the learned sacred style at the imperial court. Moreover, a few other arias in *Daniello* resemble the style of his earlier Neapolitan operas. If Hasse's, this oratorio represents his earliest major work for Vienna and a significant compliment (the text was a new one by the imperial court poet Apostolo Zeno), since the protocol would have had Caldara set it first.

Hasse's authorship of *Daniello* is also strengthened by the fact that he must already have come to the attention of the Austrians when his operas were performed at S Bartolomeo; Austrian interest in the cultural affairs of Naples, under their rule until 1734, was keen, and it was no coincidence that new operas were given on days honouring the Austrian royal family. For example, Hasse's very first *opera seria, Il Sesostrate*, was first performed at the S Bartolomeo theatre on 13 May 1726, the ninth birthday of Maria Theresa, the future empress. When repeated in the autumn season, it marked the birthday of Maria Theresa's mother, Elizabeth of Brunswick-Wolfenbüttel (26 August). It is noteworthy that in both librettos Hasse is identified as *maestro di cappella* to the Duke of Brunswick (where his *Antioco* had been performed in 1721). The first four of Hasse's operas for S Bartolomeo (1726–8) were dedicated, albeit *pro forma*, to the viceroy Cardinal Althann, the next five (1730–32) to Althann's successor, Count Harrach, or Harrach's wife. Although Hasse's visit to Vienna in 1731 is the first of which anything is known, his wife, Faustina, had already sung for the Viennese court in the mid-1720s.

On 7 or 8 July 1731, the day after their arrival in Dresden, Faustina made her début before the Saxon crown prince, and on 26 July she sang a cantata (now lost) by her husband to a text by M.A. Boccardi to celebrate the nameday of Princess Anna of Holstein. Hasse first conducted sacred works in the court chapel on 15 August. The main musical event of the year was the première of *Cleofide*, Hasse's first opera for Dresden, on 13 September. The text had been adapted from Metastasio's *Alessandro nell'Indie* by Boccardi: half of the 30 aria texts were not by Metastasio and as many were taken from earlier operas. Boccardi introduced an *ombra* scene in Act 2 reminiscent of the ghost scene that Boldini had added for Hasse's *Artaserse* (1730, Venice). Probably considered dramatically stronger by Hasse (and by H. Abert, *Niccolò Jommelli als Opernkomponist*, Halle, 1908), the portrayal of madness, in an accompanied recitative, added a Baroque element lacking in the original libretto. But in 1736, well before a close relationship between Hasse and Metastasio had developed, the

composer's reworking of *Alessandro nell'Indie* for Venice returned to Metastasio's original text.

The première of *Cleofide* was attended by J.S. Bach and his eldest son. Bach gave an organ recital the next day in the Sophienkirche; the court musicians were in attendance, so it was probably also heard by Hasse. C.P.E. Bach told Forkel in 1775 that his father and Hasse were well acquainted; Hasse could have visited Bach in Leipzig in the 1730s and 40s. The great interest that Hasse's first Dresden opera generated in the Saxon capital and elsewhere is indicated in various ways. For instance, elaborate vocal ornamentation for the aria 'Digli ch'io son fedele' (Act 2 scene ix) survives in the hand of Frederick the Great (*D-Bsb*). Suggesting broad interest in the opera are the arrangements for solo lute of 14 of its arias by Johann Kropfgans, and perhaps by Kropfgans's teacher Silvius Weiss, in a manuscript dating from about the 1740s (*D-LEm*). Weiss was a close friend of Hasse: he and Faustina were godparents to Weiss's son Johann Adolf Faustinus in 1741. Many contemporaneous lute arrangements of other Hasse arias, some with written-out cadenzas and a few with singers' names and text underlaid, survive (Crawford, G1993). An alternative third movement in a manuscript at Aalholm, Denmark, for Hasse's Flute Concerto in G (Walsh, op.3 no.1; Witvogel, op.1 no.2) has been identified by Oleskiewicz (G1998) as a literal transcription of 'Se trovo perdono' from *Cleofide*.

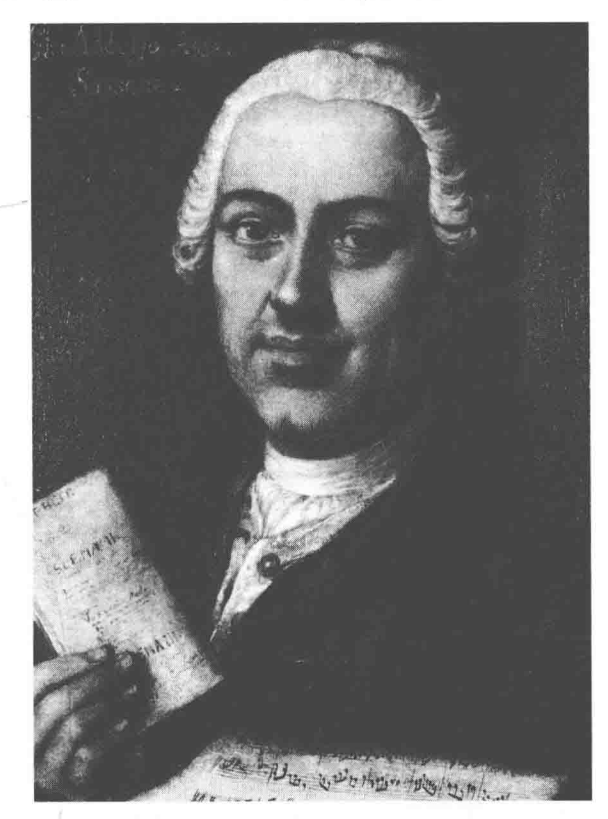
This movement, along with much other evidence, supports Oleskiewicz's well-reasoned argument that the *galant* style of Hasse's vocal music of the 1730s was a powerful influence on the music of Quantz, who was flautist in the Dresden court orchestra from 1727 to 1741. Quantz brought many elements of the Dresden style to Berlin when he transferred to the court of Frederick the Great, and his *Versuch einer Anweisung die Flöte traversiere zu spielen* (1752) reflects Dresden experiences rather than established Berlin practices when advocating specific musical styles, size of orchestras, articulations, subtle dynamics, tempo rubato and other details of performing practice.

On 7 October 1731 Hasse directed at Dresden his cantata *La gloria sassonia* (music lost) in honour of the crown prince's birthday; the next day he left with Faustina for Italy for the premières of his next operas, *Catone in Utica* in Turin in December and *Cajo Fabricio* in Rome in January. The libretto of *Catone* shows that 11 of the arias did not belong to Metastasio's original text; of *Cajo Fabricio* only four arias and a concluding chorus were Zeno's. However, earlier arias were used; but Hasse's productivity was enormous. Shortly after the premières in Turin and Rome he provided two operas for Venice: *Demetrio*, in the 1732 carnival season at S Giovanni Grisostomo, and *Euristeo*, given in May at S Samuele (the latter was a pasticcio of arias from other Hasse operas, the former probably original). Two arias in *Euristeo*, to a libretto ostensibly by Zeno though modified by Lalli, are from Metastasio's cantata *Irene*; it seems reasonable to assume that Hasse had earlier set this text. Faustina did not sing in Hasse's Turinese and Roman operas; she did, however, appear in Hasse's *Demetrio* and Giacomelli's *Epaminonda* during carnival at the S Giovanni Grisostomo theatre. That she did not sing in *Euristeo* was probably because the arch-rival of her London years, Francesca Cuzzoni, was in it; Cuzzoni sang in several Hasse operas, but never opposite Faustina.

In autumn 1732 Hasse visited Naples, where *Issipile* had its première at S Bartolomeo on 1 October, the birthday of Emperor Charles VI. For the 1732–3 season in Naples Faustina was paid the enormous fee of 3300 ducats; for what is conjectured to have been his intermezzo *Arighetta e Cespuglio* Hasse was paid 50 ducats (Cotticelli and Maione, B1993). With Spain's recovery of Naples in 1734 Hasse's influence there waned for a few years. Except for a performance (much altered) of *Cajo Fabricio* in 1733 and one of *Alessandro nell'Indie* in 1736 (under Giuseppe de Majo, who provided a prologue), he had no works performed in Naples until *Tito Vespasiano* (or *La clemenza di Tito*) in November 1738. Interest in Hasse's music returned, however, with the marriage in May 1738 of the Saxon princess Maria Amalia to the Bourbon king, Carlo; many of his operas were staged at S Carlo during their reign, as mentioned below.

At the Teatro Malvezzi in Bologna *Siroe*, Hasse's only new opera in 1733, was produced in an exceptionally grand manner with excellent singers, including the castratos Farinelli and Caffarelli, the contralto Vittoria Tesi and the tenor Filippo Giorgi. Faustina did not perform because she was pregnant at the time. It had its première on 2 May and was repeated 25 times until 21 June; Hasse officiated at the harpsichord for as many as 19 performances, and was well paid with 1260 lire and lodging. The opera was revived in more than a dozen cities before 3 August 1763, when Hasse directed a partly reworked version at Dresden, the first opera given there after the Seven Years War.

The Saxon Elector Friedrich August I ('the Strong') died on 1 February 1733, and because of court mourning Hasse remained abroad. It was not until 1 December 1733 that Hasse took up duties as Kapellmeister to the Dresden court under Friedrich August II (1696–1763). If he divided most of 1733 between Venice and Vienna, he probably began writing some of the many motets and other sacred works for the soloists at the Incurabili: there are at least 20 of his motet texts in two large volumes (in *I-Vmc*), copied by members of the Ospedale choir between 1733 and 1742. Two more volumes contain texts set between 1745 and 1760. For many of these 215 texts no composer is named and it is difficult to estimate how many Hasse may have set. But about 40 have been located in full scores, some in two versions (Hansell, B1966). The motets were performed mostly at Vespers, followed by a solo setting of a Marian antiphon. 12 antiphon settings that Hasse must have intended for the Incurabili survive. His oratorio for the Incurabili, *Serpentes ignei in deserto* (also known by other titles), could have been written as early as 1733 but more probably dates from about 1735–9, the years when Hasse was officially named *maestro* at the Ospedale degli Incurabili; in style it resembles his secular music of that time. The oratorio *Il cantico de' tre fanciulli*, given in Dresden in 1734, uses the same overture. Koch (F1989) reports that *Il cantico* survives in several versions performed in Dresden seven times between 1734 and 1753; *Serpentes* (arranged for mixed chorus) was, on the other hand, revived in Berlin, and at a rather late period: in 1778 and 1788.



Hasse's *Euristeo* (1732, Venice) was dedicated to the English nation, and his *Demetrio* honoured the Earl of Middlesex. Hasse may have sought invitations to visit London; but he did not take up the direction of the Opera of the Nobility in December 1733 (as Gerber stated). He

never visited London, although he told Burney 'that he had often been invited, and had often wished to go to England, as he had known many persons of that kingdom, from whom he received great civilities'. On 4 December 1733 Handel directed in London an opera, *Cajus Fabricius*, mainly by Hasse: 19 of its arias were from *Cajo Fabricio*, two from *L'Ulderica* and *Tigrane* of 1729 and only five from other composers' operas. Handel's respect for Hasse is shown by the 49 arias from 15 different Hasse operas he used in seven of his London pasticcios of 1730–34, and the Opera of the Nobility presented many of his arias in *Artaserse* and *Siroe* during 1734–5. Hasse must have known about these performances. He may have met Handel in Naples after the carnival season of 1729, when Handel acquired copies of his early operas. He could also have heard about the performance of *Siroe*, about which Burney remarked: 'This is the first time that I ever perceived the composer of an opera named in the advertisements and bills of the day'.

3. Dresden and Venice, 1734–44. Hasse's second period in Dresden lasted from 3 February to 5 November 1734, during which he wrote no new opera for the court. He and Faustina were paid, nevertheless, a full year's salary, 6000 thalers, plus 500 thalers for travel. With a revival of *Cajo Fabricio* in July, the intermezzo *L'artigiano gentiluomo* (a revision of his *Larinda e Vanesio* of 1726) was performed. *Sei tu, Lidippe*, a serenata for four soloists and chorus, celebrated the return to Dresden of the elector, who had been in Danzig in July. In addition to these minor works and the oratorio *Il cantico de' tre fanciulli* for Good Friday, 23 April 1734, Hasse could have composed some of the sacred works that survive in undated copies. A trip to Jaromeritz (Jaroměřice) in Moravia, where *Cajo Fabricio* was performed in autumn 1734 under the auspices of Count Johann Adam von Questenberg, seems possible, though unlikely; an autograph score entitled not *Cajo Fabricio* but *Pirro*, as in the Moravian production, was among Hasse's own scores at the end of his life (*I-Mc*).

In November 1734 the Elector of Saxony, also King of Poland, took his court to Warsaw. Hasse was again free to visit Italy, and did not return until January 1737. He probably spent most of this period in Venice, where he rented a house. He directed his new setting of *Tito Vespasiano* (a modified version of Metastasio's *La clemenza di Tito*) to inaugurate the Teatro Pubblico in Pesaro on 24 September 1735; Faustina sang a leading role. Their return to Venice must have preceded the 1736 Carnival season, when *Alessandro nell'Indie* was staged at S Giovanni Grisostomo. Its libretto is the first to name Hasse *maestro di cappella* of the Incurabili; by the mid-1730s he may well have composed for the institution for several years but had not had the Saxon elector's official permission to call himself *maestro*. Copies of the *Salve regina* in A, sung by Farinelli in London and published there in 1740, indicate that it was composed for an Incurabili soloist in 1736.

Especially intriguing are performances in 1735 of Hasse's *Artaserse* and *Demetrio*, originally given in Venice 1730 and 1732 respectively, as the earliest *opere serie*, at Malta's first opera house, the Teatro Manuel in Valletta, built in 1732. Moreover, Hasse's *La sorella amante* of Naples 1729 was revived in this theatre in 1736 to be Malta's earliest *opera buffa*. Its cast of four male and four female singers was Neapolitan according to a libretto

*1. Johann Adolf Hasse: portrait by an unknown artist (Civico Museo Bibliografico Musicale, Bologna)*

printed in Naples. The performance poses the question of whether this *opera buffa* was staged about this time elsewhere in Italy. The autograph score (*D-Dl*) shows alterations in Hasse's hand that postdate the 1720s. The *Demofoonte* revived at Valletta in 1765 is credited to Hasse (possibly his revision of 1758 for Naples).

During Hasse's next visit to Dresden, from February 1737 to autumn 1738, he composed five *opere serie* to texts by S.B. Pallavicino, court poet there from 1698 until his death in 1742. The smaller orchestra used at Hubertusburg, the court's country estate, for operas such as *Asteria* on 7 October 1737, is comparable to that employed in concerted works performed in the Hofkirche (Oleskiewicz, G1998). Thanks to surviving parts (*D-Dl*), payment accounts (*Dla*) and the published *Hofkalendar* for 1737, it is possible to ascertain the make-up of such a reduced orchestra. It consisted of two flutes (Quantz and Pierre-Gabriel Buffardin), two oboes (one of whom doubled on chalumeau), two horns, six violins (as well as the Konzertmeister J.G. Pisendel), two violas, two cellos, double bass, two bassoons, lute (S.L. Weiss) and harpsichord (Hasse, when available). It is above all the string section that would have been expanded for Dresden's large opera house. In her discussion of orchestral practices Oleskiewicz points out that performances of flute concertos in the large private music chamber of Queen Maria Josepha might have used only one instrument to a part.

Hasse also prepared a revision of *La clemenza di Tito* (17 January 1738) on the anniversary of the coronation of the Saxon Elector Friedrich August II. For *Alfonso* (11 May 1738), celebrating the marriage of Princess Maria Amalia to Carlo, King of the Two Sicilies, the opera house

was rebuilt, and a revised version of Hasse's intermezzo *Lucilla e Pandolfo* (1730) was given. In fact Maria Amalia is credited with having requested performances in Naples soon afterwards of three other intermezzos by Hasse, *Carlotta e Pantaleone*, *Merlina e Galoppo* and *Dorilla e Balanzone*. After the Saxon court's removal to Warsaw in September 1738, Hasse and his wife went to Venice, where Faustina sang in several operas, including Hasse's *Viriate* at Carnival 1739. Lalli, the impresario there, dedicated the production to Hasse's Saxon patron, Crown Prince Friedrich Christian, then touring Italy; he also altered the text, based on Metastasio's *Siface*, and issued a collection of a dozen sonnets flattering Faustina. Her husband's popularity in Venice was at its peak: the French traveller Président de Brosses (*Lettres familières*) declared 'le Saxon est aujourd'hui l'homme fêté'.

Hasse's next, and longest, stay in Dresden was from early 1740 to January 1744. *Demetrio*, almost completely rewritten and given on 8 February 1740, probably has nothing to do with the version performed almost simultaneously at S Angelo, Venice, as *Cleonice* (like *Viriarte*, it was dedicated to Prince Friedrich Christian, then in Venice). The Dresden production was staged with Pergolesi's *La serva padrona* (it was the first time in Dresden that Hasse had conducted a work he had not composed). A revised setting of *Artaserse* was given in September 1740 on the prince's return; there were 12 new arias, five of them for Faustina. *Numa Pompilio*, the last opera of 1741 and the last to a Pallavicino text, was performed on 7 October in the small theatre at Hubertusburg and revived at Dresden during Carnival 1743. An intermezzo, *Pimpinella e Marcantonio*, was given not only between the acts of the *opera seria* but penetrating the fifth and sixth scenes of Act 2 (an old-fashioned usage). It was Hasse's first new intermezzo for over a decade; this and *Rimario e Grilantea*, possibly performed with *Numa Pompilio* on 3 November 1741, were his last two comic works. He evidently came to share the opinion Faustina voiced to Vogler in October 1775 when she bade him never to compose an *opera buffa* because it could only hurt the sublime style of singing.

Quite unusual are two lost pasticcios by Hasse performed with puppets at the Nuovo Teatro de' Bambocci or di S Girolamo owned, managed and financed by Angelo Maria Labia in the Cannaregio of Venice. This *teatrino* was a reproduction in miniature of the S Giovanni Grisostomo theatre in Venice, so that singers and instrumentalists were hidden from view backstage. Hasse's *Lo starnuto d'Ercole* (Carnival 1745 and 1746) and *Eurimedonte e Timocleone* (1746) were the first two of six operas by different composers performed there in the period 1745–8. Despite splendid costumes and scenery and an excellent orchestra, *Lo starnuto* had a burlesque, at times satirical, libretto, atypical for Hasse. Since many details connect Hasse to Labia and his wife, the singer Caterina Barberis, it is not unlikely that, while Andrea Adolfati directed the orchestra, both Hasse and Faustina took their turn with other singers. There is evidence that the Nicolini troupe, which toured Germany and Bohemia in the 1740s, performed some of Hasse's intermezzos with puppets.

Hasse's oratorio *I pellegrini al sepolcro di Nostro Signore* had received its première on 23 March 1742. His most popular oratorio in Dresden, it was repeated in Holy Week in nine subsequent years until 1756. Several operas by Hasse were performed at the Brunswick court during the 1740s. After his first opera, *Antioco*, given there on 11 August 1721, there was no music sung until a pasticcio, *Farnace*, was performed in 1738. Starting in 1743, six or seven operas by Hasse were given, including *Titus Vespasianus* (1743/4), *Antigonus* (1746), *Hermann und Varus* (the second version of *Arminio*, 1747), *Leucippo* (1747 and 1765, also performed at the summer residence at Salzthal in 1748), *Die erkannte Semiramis* (1748) and *Artaserse* (1751). Hasse's music was also included in no fewer than seven other pasticcios between 1744 and 1749. His intermezzo *Il Tabarano* (i.e. *Scintilla e Don Tabarano*) was performed in 1750. Despite some German titles, the arias of these works (but probably not recitatives) were sung in Italian. Hasse's presence at any of these performances is unlikely. In fact, no evidence indicates that he ever visited his brother and other relatives in Bergadorf (Hamburg), not far from Brunswick or Berlin.

4. Hasse and Metastasio. Hasse's interest in the expression of drama and other issues in the fine arts must have deepened in the 1740s and 50s. The scholar, theatre critic and poet Francesco Algarotti, who served the Saxon elector as court councillor from 1742 to 1747, the painter Antony Raphael Mengs and a circle of literati, painters and sculptors surrounding these men in Dresden, must have provoked debate into which Hasse could well have been drawn. Perhaps Frederick the Great, undoubtedly influenced by Algarotti, whom he had kept at his court in the early 1740s, also helped Hasse to ponder his own best approach to the opera libretto. The Prussian ruler entered Dresden on 19 January 1742 to sign a treaty, and that evening requested a performance of Hasse's *Lucio Papirio*, which, loosely based on Zeno, had had its première the previous day. Frederick later revealed his enthusiasm for the opera and his thoughts on classical principles in letters to Algarotti. In time, Hasse, the Dresden art academy director C.L. von Hagedorn, Mengs and later the classical archaeologist J.J. Winckelmann reacted to and explored Algarotti's canons in different ways.

In 1742 Algarotti altered for Hasse Metastasio's *Didone abbandonata* for performance on the small stage of the Hubertusburg theatre: the burning of Carthage which concludes the original text was replaced by a lengthy recitative and aria. The classical restraint of Algarotti's substitution must have seemed an improvement on Metastasio's youthful libretto of 1724; as late as 1757 Hasse asked Algarotti to send the score of the closing scene so that he could give it to Padre Martini (it is now in *I-Bc*). But Algarotti, who at times voiced criticism of certain conventions of the Metastasian theatre, may nonetheless have guided the composer indirectly towards a preference for Metastasio's original texts, which Hasse, along with other composers, had cavalierly disregarded, accepting them in altered form with every new revival or revision.

In 1743–4 Hasse was called on to set two new Metastasian texts; he was thus obliged to set them without changes. These were *Antigono* (1743, Dresden) and *Ipermestra* (1744, Vienna). The latter was commissioned by the Habsburg Empress Maria Theresa to celebrate the wedding of her younger sister, Archduchess Maria Anna, with Carl Alexander of Lorraine (brother of her husband). The empress initially intended to sing a key role herself, and some rehearsals with family members did take place at the Vienna court. That plan abandoned, Hasse and

Metastasio attended rehearsals in December 1743 with a professional cast assembled too late to be listed in a printed libretto. But the production at the Burgtheater was lavish with scenery by Giuseppe Galli-Bibiena. Hasse's close friendship with Metastasio blossomed at this time, as the poet wrote on 9 March 1744:

> Never until now had I happened to see [Hasse] in all his glory, but always detached from his many personal relationships in such a way that he was like an aria without instruments; but now I see him a father, husband and friend, qualities which make an admirable union in him with those solid bases of ability and good behaviour, for which I will cherish him so many years.

Metastasio would undoubtedly have met Hasse in Vienna a few months later, on 12 May 1744, when the tenor Amorevoli and Hasse's wife, Faustina, sang to the harpsichord playing of Hasse himself before the imperial family in the hall of mirrors at Schloss Schönbrunn (see Grossegger, C1987). It is likely also that Hasse and Faustina frequently visited Vienna throughout the many years they were contracted to the Dresden court, and that their friendship with Metastasio deepened. By 1761 Hasse had set all the opera texts Metastasio had written before *Antigono* bar *Temistocle* (which he never set). The altered Metastasian librettos that Hasse had set before the early 1740s were reset with great fidelity to the poet's original intentions: *Demofoonte* (1758), *La clemenza di Tito* (1759), *Artaserse* (1760) and *Siroe* (1763); and as Metastasio wrote new *opera seria* and *festa teatrale* texts during the 1760s Hasse was usually the first to set them. Following *Il Ruggiero* of 1771, their last collaboration, Burney remarked:

> This poet and musician are the *two halves* of what, like Plato's *Androgyne*, once constituted a *whole*; for as they are equally possessed of the same characteristic marks of true genius, taste, and judgement; so propriety, consistency, clearness, and precision, are alike the inseparable companions of both ... [Hasse] may without injury to his brethren, be allowed to be as superior to all other lyric composers, as Metastasio is to all other lyric poets.

5. Dresden, 1744–56. The most important event of Hasse's subsequent period in Dresden, from autumn 1745 until spring or summer 1746, was the visit of Frederick the Great after the battle of Kesselsdorf. He heard a Hasse *Te Deum* in the Kreuzkirche on 19 December 1745, and ordered a performance of Hasse's *Arminio* (the first to a libretto by the new court poet, G.C. Pasquini). Frederick's enthusiasm for Hasse's operas was matched by interest in his flute music, much of which had been published in London before the king's 1742 visit to Dresden. Some of Hasse's many flute sonatas, trios and concertos probably date from this time. The fact that few survive in autograph may be explained by their having been among the material for the 'complete edition of all his works' (Burney) being prepared by the Leipzig firm of Breitkopf but destroyed in the Prussian bombardment of Dresden on 19 June 1760. Hasse's letter of 14 June 1756 asking the Saxon elector's permission to publish his 'operas and musical works' does not mention flute pieces or chamber music specifically (Viertel, A1973). But since Hasse's operas, oratorios and large choral pieces survive in autograph scores (mostly at *I-Mc*), and since the market for his larger vocal works would not have approached that for sonatas, trios and concertos, the music for Frederick the Great may have made up the greater part of what was to have been printed. Perhaps it was not pretentious boasting when Hasse told Burney in 1772 that if Frederick the Great 'had known that contingencies would have obliged him to bombard Dresden, he would previously have apprised him of it, that he might have saved his effects'.

The Dresden opera house was closed from December 1745 until January 1747, but several operas, including Hasse's *La clemenza di Tito*, were given in a temporary theatre by the Mingotti troupe. The only large new work conducted by Hasse in 1746 was his Easter oratorio *Sant'Elena al Calvario*. Although never as popular in Germany as his *I pellegrini* of 1742, it was performed there occasionally before 1772, when Hasse completely reworked it for Vienna.

Despite Prague's close proximitity to Dresden, no Hasse opera was performed in Prague under the direction of the impresario Antonio Denzio until *Semiramide* in summer 1746. In his study on the Sporck theatre in Prague, Freeman (C1992) has argued that singers for Hasse's music would always have been expensive, and therefore that Gluck and Stamitz during their youths saw only a narrow and old-fashioned repertory dominated by Venetian operas. Only three other productions attributed to Hasse were ever shown in Prague: *Semiramide* (revived in 1760), *Solimano* (1761) and *Il trionfo di Clelia* (1766), all at the Kotzen theatre.

On his way to Italy in July 1746 Hasse visited Munich, where he accompanied the Bavarian Elector Maximilian on the bass viol and his sister Maria Antonia Walpurgis, who sang and who later provided Hasse with several poetic texts. In a double wedding for which Hasse, once more in Dresden, wrote his *La spartana generosa* (14 June 1747), Maximilian and Maria Antonia Walpurgis married the Saxon Princess Maria Anna and her brother Crown Prince Friedrich Christian. For the name days of her new parents-in-law, Maria Anna Walpurgis wrote the poetry for Hasse's orchestral cantatas *Grande Augusto* and *Che ti dirò*, in which she herself sang on 3 August and 8 December 1747. Soon thereafter, Maria Antonia engaged Porpora as her vocal tutor; he came to Dresden in February 1748, was named Kapellmeister on 13 April and remained until 1 January 1752. His appointment undoubtedly prompted Hasse's promotion to Oberkapellmeister (i.e. *primo maestro di cappella*) in 1750. Reports that Hasse treated Porpora badly are unsubstantiated. Burney wrote that 'He spoke ill of no one; but, on the contrary, did justice to the talents of several composers ... even to those of Porpora; who, though his first master, was ever after his greatest rival'.

For the marriage, also in 1747, of the Saxon Princess Marie Joseph to Louis XV of France Hasse provided a reworked version of *Semiramide riconosciuta* (the score, in *D-Dl*, shows extensive revisions in his hand). This union no doubt explains Hasse's visit to Paris in summer 1750. He composed four harpsichord sonatas which survive in manuscript, marked 'fatte per la Real Delfina di Francia', and probably also his only cantata with a French text, *Long tems par une rigueur feinte*. The *Te Deum* Hasse was asked to write could be the one in D dated 1751. His *Didone abbandonata* was perhaps given with the intermezzo *Pimpinella e Marcantonio* at Versailles on 28 August 1753. In addition, the oratorios *I pellegrini al sepolcro di Nostro Signore* and/or *La conversione di Sant'Agostino* (to a libretto by Maria Anna Walpurgis) may have been performed during the French visit of 1750. It is reported that Hasse was irked by music she mailed to him in Paris: she expected him to correct or

orchestrate her melodies for *Il trionfo della fedeltà* (1754, Dresden). The numerous manuscript copies of Hasse's operas, handsomely bound with the emblem of the Menus Plaisirs du Roi, in the Bibliothèque Nationale, further attest the queen's interest in his music.

From May 1748 until early 1749 the Saxon court was again in Warsaw, and Hasse probably supervised the production of a revised *Ezio* to inaugurate the Margrave Opera House in Bayreuth at the occasion of the nuptials of Frederike, daughter of Margrave Frederick and Wilhelmine (sister of Frederick the Great) to the Württemberg archduke Charles Eugene, on 23 September 1748. Thereafter, Hasse was probably in Venice, where revised versions of his *Demofoonte* and *Leucippo* were staged. When he returned to Dresden, his serenata *Il natal di Giove* was given at Hubertusburg (August 1749) and he worked on Metastasio's *Attilio Regolo* (fig.2), a libretto written in 1740 but owing to Emperor Charles VI's death that year never performed. In a long and famous letter of 20 October 1749 Metastasio gave Hasse detailed advice regarding the use of the orchestra, for example:

> a brief symphony seems necessary to me to give the consul and the senators time to take their seats and in order that Regulus may arrive without haste and take time to reflect ... it is necessary that the instruments anticipate him, assist him, and support him until he is seated .... Although [in recitatives] there are places ... which could be suitably accompanied by the violins, it seems to me unwise to make this ornamental procedure too familiar, and I should be pleased if, particularly in the third act, there were no instruments used until the last scene.

2. *Domenico Annibali in the title role of Hasse's 'Attilio Regolo', Dresden, 1750: design by Francesco Ponte, pen and ink and colour wash (Kupferstichkabinett, Dresden)*

Since Hasse usually did as Metastasio recommended, especially in the reticent use of orchestrally accompanied recitative, the letter may have been written mainly for the benefit of interested connoisseurs at the Dresden court rather than for Hasse himself.

The highlight of the 1751 carnival in Dresden was the singing of Felice Salimbeni, the celebrated castrato who had been lured away from the Berlin court, in a revised version of Hasse's *Leucippo* and in *Ciro riconosciuto*. The latter marked the last operatic performance of Faustina and of Salimbeni (who died in August). Both sang in Hasse's *I pellegrini* in March, and Faustina probably sang in his new Mass in D minor and *Te Deum* in D at the dedication of the Hofkirche on 29 June 1751. The transparent style of the *Te Deum*, indeed of all his hymn and psalm settings for chorus and orchestra, is sometimes thought to have been due to the resonant acoustic of the Hofkirche, mentioned by J.F. Reichardt, Vogler and others. Hasse's masses, on the other hand, sometimes show four-part counterpoint and full orchestral accompaniments as well as ornate arias that belie a concern solely for the church's resonance. Hasse was able to draw on the international Dresden opera orchestra for performances of his church music. J.-J. Rousseau called Hasse's orchestra (of 1754) 'l'ensemble le plus parfait de l'Europe' and included a seating plan in his *Dictionnaire* (1768). Marpurg printed an impressive list of the musicians in 1756 and J.G. Pisendel, the Konzertmeister, wrote to Telemann expressing great respect for Hasse.

But difficulties arose for Hasse in 1752. The singer Regina Mingotti was to have been Faustina's successor as prima donna beginning with *Adriano in Siria* (Carnival 1752), but a rivalry between the two women seems to have involved Hasse, who then had his earliest severe attack of gout. Rehearsals would not have begun before March, it was feared, had not Pisendel stepped in for Hasse as orchestral director. Thus the opera was given its première on 17 January and performed 11 times in all by 15 February. But Pisendel's complaints of poor rapport and his recommendation that only German-speaking orchestral musicians should be engaged earned Hasse's reprimand. Further evidence of malaise at the musical establishment is provided in Act 3 scene vii of Hasse's autograph score of *Adriano* (*I-Mc*), where his handwriting is even more illegible than that of his occasionally trembling hand of the late 1770s. The notation of the aria in question, 'Ah che manca un sento' for Mingotti, dramatically interrupts the well-regulated, elegant hand of the composer and the clear writing of the recitative texts by the Dresden court copyist Girolamo Personé, it also contrasts with that of Mathäus Schlettner, responsible for notating words and music of the final chorus immediately following. That neither aria nor chorus is included in the printed libretto hints once again at untidy management at the court. The situation culminated, it would appear, in Mingotti's release without pension on 1 March 1752.

As if to demonstrate her ability and readiness to match Faustina's best qualities, Teresa Albuzzi-Todeschini, who was engaged to replace Mingotti, sang the role of Tusnelda (which Faustina had created at Dresden in 1745) in the 1753 revival of *Arminio*. Todeschini was prima donna in Hasse's next five operas (1753–6). Among these, *Solimano*

and a substantially revised *Ezio*, for the carnival seasons of 1753 and 1755, were imposing spectacles, with hundreds of extras for mob scenes and an array of animals including horses, mules, elephants and camels, using outdoor space behind the stage illuminated by thousands of candles and lamps. 23 exquisite drawings at the Albertina in *A-Wn* by Francesco Ponte for *Solimano* show not only costume designs in detail but also singers' faces; 41 other of his designs illustrate Dresden productions of *Antigono* (1744), *Adriano* (1752), *Arminio* (1753) and *Artemisia* (1754). The librettist of *Solimano*, G.A. Migliavacca, is said to have displeased Hasse, who set and then cut out much recitative. Except for Coltellini's tragic intermezzo *Piramo e Tisbe* (1768) Hasse was never to set another text by any poet but Metastasio.

Hasse's new operas for the autumn and carnival seasons 1755–6, *Il re pastore* and *L'Olimpiade*, were of conventional dimensions, but the opulence of opera at Dresden might have continued with works matching the grandeur of *Solimano* and a revised *Ezio* but for the Third Silesian War. Although the Saxon elector was exiled in Warsaw from September 1756 to April 1763, Hasse remained initially in Dresden between 14 November and 20 December 1756 presented daily concerts for Frederick the Great. He had been Frederick's guest in Potsdam in March 1753, shortly after his *Didone abbandonata* had received ten performances in the Königliches Opernhaus in Berlin.

Between 1743 and the mid-50s half a dozen different operas and intermezzos by Hasse had been performed in Berlin and Potsdam. Handsome staging and excellent singing characterized the productions, generously financed by Frederick the Great (see Henzel, C1997). While perhaps seven Hasse operas were staged in the 1760s, the following 20 years witnessed at least 14 productions of his *opere serie*, at a time when almost all the other opera houses of Europe had ceased to cultivate his operas. Performances of several of his oratorios, on the other hand, were numerous and widespread throughout the 1770s and 80s, and a few even into the 19th century, in German-speaking Europe.

6. Works for Naples and Warsaw, 1756–63. Either respect for Hasse or fear of imminent war prompted the Saxon elector to grant Hasse *Urheberrecht* (copyright protection) on 31 July 1756. At about the same time, the elector granted Hasse liberty to travel as he transferred his court to Warsaw for the duration of the Seven Years War. (As king of Poland he was named August III.) In fact, Hasse travelled extensively and showed an astonishing ability to execute commissions in widely separated places, and he must have composed at great speed and coached singers with remarkable efficiency. We know that he and Faustina had often visited Venice whenever court music was not required in Dresden; but in the late 1750s and early 60s Hasse's travels connected Naples and Warsaw, with Venice and Vienna *en route*.

Hasse composed much sacred music for the ladies of Venice's Incurabili. He showed loyalty to the institution virtually throughout his life, and might well have helped out in 1757–60, while its *maestro di cappella* Gioacchino Cocchi was in London. Although Hasse's oratorio *Giuseppe riconosciuto* was performed at S Filippo Neri (also known as the Fava church) during Holy Week 1757 (in what Koch has called the composer's 'last supervised version'), Hasse would not have been expected to direct it, and he would not normally have conducted at the Teatro S Benedetto, where *Nitteti* was performed in January 1758: its survival in many copies suggests that it was considered more important than the occasional pasticcio, though it could have been assembled by someone other than Hasse. In summer 1758 P.J. Grosley de Troyes witnessed Hasse's conducting: '400 voices and instruments chosen from among the virtuosos of Italy, who had gathered in Venice for this festival [of St Lawrence], made up the forces directed by the famous Sassone who had composed the music'.

By early summer 1758 Hasse had gained permission to visit and compose music for Naples, thanks to the urging of Princess Maria Amalia of Saxony, who exerted considerable influence through her husband on music there. From documents in the Dresden Staatsarchiv, Dietz (B1996) was able to shed much light on the cultivation of Hasse's operas during Maria Amalia's years in Naples (June 1738 to October 1759). During the initial decade (1738–47) there were at least ten revivals of operas by Hasse, some reworked by local composers (Antonio Palella and Leonardo Leo), and as many as 16 opera productions might well have included music by Hasse. Only one, *L'asilio d'amore*, was actually composed for Naples, although it received its première at Hubertusburg on 7 October 1743. Hasse had suggested that the Neapolitan production should be conducted, in his absence, by his 'antico amico' Francesco Feo. Hasse was paid 100 zecchini for it, but the date of a Neapolitan performance remains unclear. It is noteworthy that recent works by Hasse pleased the Neapolitans; revivals of 15-year-old operas, on the other hand, disappointed and were deemed old-fashioned. 'Old' operas by Vinci, Leo, Porpora and other Neapolitans were similarly criticized.

During the second decade the number of operas by Hasse falls to a meagre two, but they were recent works and well received: *Demofoonte* (1750) and *Adriano in Siria* (1755). It was during the third period of Hasse operas, however, that considerable excitement for the composer animated the city. The petition of King Charles and Maria Amalia to her father, then exiled in Poland, to let Hasse visit Naples and supply new operas were granted. Hasse revised three operas and wrote one new one for Naples: *Demofoonte* (November 1758), which Grosley de Troyes witnessed and praised, *La clemenza di Tito* (January 1759), *Achille in Sciro* (November 1759) and *Artaserse* (January 1760). Maria Amalia was not to see the last two because she and Charles left for Spain on 10 October 1759. As a new queen of Spain, she yearned for the musical scene in Naples and for her old tutor: she had waited 20 years to see Hasse come to Naples. Less than a year after her arrival in Spain she died, on 27 September 1760.

Before his exile during the Seven Years War, August (as Elector of Saxony) had sponsored hardly any opera in Warsaw. The earliest Hasse opera August brought to Poland was on a six-month visit in 1754; revived on the king's birthday (on 7 October, just one year after its première at Hubertusburg), it was *L'eroe cinese*. It was performed only eight times, but the production was undoubtedly opulent since 170 musicians, dancers, stage technicians and others were brought from Dresden, largely under the supervision of Count Heinrich von Brühl, the prime minister at the Saxon court. The 'Mr. Goldberg' who played the harpsichord may well have been Johann

Gottlieb Goldberg, J.S. Bach's friend, at that time in the personal service of Brühl. Earlier Brühl had paid the lutenist S.L. Weiss to be his house musician.

Considerable information on the seven years August spent in Poland and on Hasse's Warsaw operas survives in the Dresden Staatsarchiv, and is supplemented with information from Polish sources (see Zórawska-Witkowska, C1993). Letters of the king, his 'inseparable' Brühl and Count Wackerbath to and from Maria Antonia in Naples and the king's son, Crown Prince Frederick Christian, and daughter-in-law Maria Antonia Walpurgis, both left behind in Dresden, indicate the melancholy of the king, the importance of music to him and his eager reliance on Hasse for new operas and singers. Initially August had no musical resources at hand. The performance of Hasse's *I pellegrini* on 24 March 1758 at the Chiesa dei Cappuccini in Warsaw was probably given by local forces. In that month Hasse posted from Venice a revised version of his opera *Nitteti* to Brühl, who promptly had it copied and sent to Maria Antonia so that it might be performed in both Naples and Warsaw. At the same time Hasse sent to Warsaw a serenata for five voices, *Il sogno di Scipione*, for performance on his patron's birthday (7 October). The text was printed in Warsaw – librettos of Hasse's operas were sometimes issued with Polish translation – but only the first half of the music survives (in *D-Dl*).

Zórawska-Witkowska suggests that Hasse attended performances of *Nitteti* in Warsaw (the dress rehearsal was on 22 July 1759) and that he composed *Achille in Sciro* for Naples while still in Poland. The Warsaw version of *Nitteti* includes five arias taken from the Neapolitan version of *Demofoonte* (which was given in its entirety at Warsaw on 7 October 1759); there was thus new music for 14 of its 19 arias, six or seven with modified text, as well as a new final chorus to distinguish the Warsaw version of *Nitteti* from the Venetian version of the preceding year. Similar changes for other Warsaw productions indicate the composer's willingness to adjust music to new singers. The cast for *Nitteti*, as for several other Warsaw operas, was all male. Evidence shows that Hasse continued to compose quickly – between seizures of gout which the king described in his correspondence as terrible – and probably worked on more than one opera at a time. Four Hasse operas were performed for August in 1760: *Nitteti* (seven times) and *Demofoonte* (three times) in January, *Artaserse* (11 times, beginning on 3 August) and *Semiramide riconosciuta* (three times, beginning on 7 October). On 10 September the king wrote to say that he wished to return to Dresden, which had been badly bombed by the Prussians during the summer, but he awaited the peace settlement of 1763.

With his obligations to Naples barely completed, in January 1760 Hasse committed himself to a new score for Vienna (*Alcide al bivio* received its première in October 1760), while preparing more operas for Warsaw: *L'Olimpiade* (January 1761), *Arminio* (18 July 1761) and *Zenobia* (7 October 1761). The oratorio *Sant'Agostino* was performed, probably without revisions, in Warsaw on 20 March 1761. The next year, 1762, the most brilliant for opera in Warsaw, marked an artistic climax for the king. Four operas were performed a total of 46 times with excellent casts: *Zenobia* (given 18 times in two seasons), *Ciro riconosciuto* (17 January), *Il trionfo di Clelia* (3 August, given 17 times in one season) and *Il re pastore* (7 October) directed by Hasse himself, who had arrived in Warsaw some time in the autumn. Of these operas the newest was *Il trionfo di Clelia* – it had received its première in Vienna less than four months earlier – and yet it was adjusted for Warsaw with two additional arias (out of a total of 20). Hasse's pupil and and close friend, the Austrian soprano Elisabeth Teyber, arrived in Warsaw in June 1762, but Hasse may have returned to Vienna by August to rehearse the première of his Litany in G for the Habsburg family.

In Warsaw performances of *Il re pastore* continued into the carnival season of 1763. *Siroe re di Persia*, reworked in Warsaw during the preceding autumn, was not yet finished, as planned, by 19 January. Since peace was announced on 15 February, the king and his musicians left for Dresden in April. Therefore it was in the Saxon capital that August saw a performance of *Siroe* on 3 August 1763, but one which contained six arias of Hasse's old 1733 version. Contrary to what these six arias suggest, Hasse's stamina for reworking arias was not yet exhausted: he revised *Leucippo* (for the fifth time) and the king attended the dress rehearsal in early October. It was the king's last opera; on 5 October he died.

What Hasse encountered in Dresden in April 1763 was a city badly harmed, with much of the court's library of sacred music burnt, his own home destroyed and the opera house devastated. The new elector, Frederick Christian (brother of Maria Amalia), was forced to institute severe economies, and musical galas were discontinued. Hasse and Faustina were paid 12,000 thaler (two years' salary) and may have been preparing to leave when the new elector died of smallpox. Hasse's Requiem in C had been performed for August on 22 November; now further exequies delayed their departure until 20 February 1764. The composer was paid 1000 thalers for performances in November and December 1763 but given no pension (Mennicke, B1906). For years, nevertheless, he continued to be named *primo maestro di cappella del re di Polonia ed elettore di Sassonia* in librettos printed in Vienna and Italy.

But Hasse was not at a loss for a new home. In fact, he was already hard at work on a new collaboration with Metastasio, *Egeria*, for performance on 24 April 1764 in Vienna. This was the fourth of eight opera or *festa teatrale* librettos Hasse was to set within a dozen years for the Habsburg court.

7. Vienna, 1760–74.

*(i) Occasional operas.* Soon after Maria Amalia, August's daughter in Naples, had petitioned her father to let Hasse compose operas for the Neapolitan court, the Habsburg Empress Maria Theresa must have requested August, her loyal political ally, to let Hasse write occasional music for her court too. Since the theatres used for the operas the empress commissioned were not commercial establishments like those in Venice, permission for new operas by Hasse was an obligatory courtesy. Throughout the decade that saw the Habsburg children come of age and submit to highly visible, political marriages, Hasse supplied music reflecting at times the French practice of filling the stage with dance and chorus, and even special scenic effects of magic reminiscent of the antiquated Baroque practice of displaying an apotheosis of the aristocrat at hand. Such was the case in Metastasio's *festa teatrale* entitled *Alcide al bivio* for the wedding of Maria Theresa's eldest son Joseph.

This entertainment was part of the wedding festivities that had begun in Parma, where the bride, Princess Isabella, granddaughter of Louis XV, had already been honoured by a French-inspired entertainment, *Le feste d'Imeneo*, by the court poet C.I. Frugoni and the *maestro di cappella* Tommaso Traetta. On the Viennese stage, renovated a year earlier by the French architect J.-A. Morand, Hasse's choruses and ballets filled a richly varied scenery that ostensibly combined aspects of French and Italian opera, recalling the recommendations of Algarotti's *Saggio sopra l'opera in musica* (1755); in Vienna all was executed under the watchful eye of Count Giacomo Durazzo, who, with the cooperation of the state chancellor Kaunitz-Rietberg, was general director of theatres under imperial control. Not to be outdone by Parma, Viennese resources were lavishly spent to produce a mingling of Italian song and French pantomime dance – all to promote the image of Alcide acting out the virtuous courage yet honest misgivings of the groom and future emperor, Joseph. The dance troupe, under the direction of Gasparo Angiolini, was at least as large as the Parmese, and the stage of the Burgtheater was equipped to accommodate scenery into which actors could move. In other words, set designs allowed a greater part of the stage to be practicable rather than, by means of optical tricks, give the illusion of space larger than the actual stage and thus discourage penetration by actors, who would thereby spoil the perspective intended. The scenographer was Jean-Joseph Chamant, who later conceived the scenery for Traetta's *Armida* (1761); the designer of stage machinery was Pietro Rizziono (or Rizzini); and the overall planner of visual effects, the 'aparato festivo del teatro', was Giovanni Maria Quaglio, who prepared the stage designs for Gluck's *Orfeo ed Euridice* (1762). Lastly, the printed libretto credits Giuseppe Ercolani as 'direttore della rappresentatione', which means that, along with the poet Metastasio, he taught stage movements to the singers. All these men had witnessed recent French and German entertainments in Vienna while Italian opera had been curtailed at the Burgtheater during the Seven Years War, and were ready to exploit naturalism in place of the formalized acting and illusionistic architecture typical of the traditional, aristocratic *opera seria*.

Owing to the role of chorus and dancers, *Alcide al bivio* may be said to belong to the earliest stage of Viennese opera reform usually associated with Gluck. That the Empress Maria Theresa liked the *festa* is in part explained by her fondness for Hasse, but even more by the way Hasse's arias display the vocal skills of virtuoso singers without getting in the way of poetic texts. While Heartz (C1985) justly identifies conservative elements in two arias from Hasse's *Artaserse* and *Alcide al bivio* (both of 1760), which he then relates to devices in Vinci's *Artaserse* of 1730, Hasse's rhythmic vitality and variety of counterpoint, along with the aptness and ingenuity of his melodic invention, reach a level of distinctiveness rarely encountered in his earlier scores. Despite his astonishingly heavy schedule of travel and composing for both Naples and Warsaw, and the fact that Metastasio's texts sometimes lack a strong psychological projection of contrasting moods and actions, Hasse wrote remarkable music: orchestrations freely mix textures in two to five (and more) parts, and instruments frequently move with highly profiled rhythms and independence against the solo voice. Even Gluck never surpassed Hasse's ingenuity and keen ear for handling instrumental colours.

The fork in the road to which Alcide (read Archduke Joseph) finds himself returning during the opera leads either towards the realm of sensuous pleasure (bathed in light, colourful vegetation, fountains and alluring music) or to a heroic, yet dark, architecture, both stony and severe. Both realms are enlivened by dancers and choirs seen through 'transparencies', and each area is transformed into a magnificent palace or temple described in many pages of music. In only one passage of the autograph score (*I-Mc*) is there a simple dance tune inserted by a copyist; otherwise dance melodies are elegant and, like the orchestrations, all in Hasse's hand. Like Gluck, whose serenata *Tetide* was also composed for this wedding, Hasse had 40 instrumentalists at his disposal placed backstage and in front of the stage: 28 strings, six pairs of wind instruments (flutes, oboes, english horns, bassoons, horns and trumpets) and timpani. Hasse's *festa teatrale* was given three times between 7 and 16 October in alternation with other entertainments. Despite its important visual component, however, a later concert performance in the Burgtheater, with the original singers seated in front of the orchestra and holding their music, was reported by Francesco Maria Hasse, the composer's son, in a letter of 28 February 1761 to the Venetian economist Giammaria Ortes, a close friend of the Hasse family. *Alcide* was performed in this manner six times between 10 February and 8 March 1761. Librettos crediting the Viennese singers, dancers, stage hands and so on were published in Florence, Milan, Naples, Rome and elsewhere, but these do not represent subsequent productions. In Vienna the *festa* was revived in a concert performance on 11 and 13 March 1781 by the Tonkünstler-Societät. It had reappeared as a puppet entertainment nearby at Eszterháza in the mid-1760s. That Haydn was influenced by the work when composing his *Acide e Galatea* for a wedding at Eszterháza in 1763 (Heartz, C1982) suggests the possible impact that numerous works of Hasse probably made on Haydn from time to time. Hasse's praise of Haydn's *Stabat mater* (reported in Haydn's letter of 20 March 1768 and his autobiographical sketch of 6 July 1776) pleased the younger composer greatly.

Another major work for the Habsburg court, Hasse's and Metastasio's *Il trionfo di Clelia* (27 April 1762), was again distinguished by lavish scenery and dance. Performed 21 times, it celebrated the birth of a daughter to Joseph and Isabella of Parma. The following year, at the time of her second child, the princess died of smallpox. But while the imperial court was in mourning Hasse set Metastasio's new one-act *festa teatrale Egeria*, to commemorate the coronation in Frankfurt of Emperor Joseph II on 3 April 1764; it was performed in Vienna on 24 April.

In January 1765 Hasse was not among the composers supplying operatic entertainments for the wedding festivities of Joseph and his second wife, the Bavarian Princess Maria Josepha, at Munich and Vienna. Instead he was in Turin to supervise a new setting, with a first-rate cast, of *L'Olimpiade*, given its première on 26 December 1764. (Earlier versions had been given in Dresden in 1756 and Warsaw in 1761.) But on 6 August 1765 another Hasse opera, *Romolo ed Ersilia*, again to a new text by Metastasio, was given in Innsbruck for the wedding of

Joseph's younger brother, Archduke Leopold, and Princess Maria Ludovica of Spain. The traditional character of this three-act opera was due in part to the conventional stage at Innsbruck's Hoftheater. A four-part chorus was sung by the male choristers of St Jakob's Church. *Enea in Italia*, the heroic ballet linked to the opera, had music by Hasse's friend F.L Gassmann. However, the unexpected death in Innsbruck on 18 August of Maria Theresa's consort, Emperor Francis Stephan, brought a sudden halt to festivities. Khevenhüller-Metsch, often critical of Hasse's music, called the music old-fashioned and said the libretto was weak, cold and with insipid love scenes. In fact, Metastasio's text generated little subsequent interest: only Mysliveček ever set it again (1773, Naples). On the other hand, the opera had suited the festive occasion. It was judged to be in sharp contrast to Gluck's *Iphigenie*, performed in Innsbruck the day the emperor died, which was criticized by Metastasio's adherents for its doleful, unpleasant subject.

From correspondence between Hasse himself and Ortes we know that Hasse was residing in Vienna in early December 1765, but by 21 December he was in Venice, where he stayed till early March 1766, when the two again exchanged places. But Hasse did not compose music for the wedding in April 1766 of Archduchess Maria Christine of Habsburg and Duke Albert of Saxe-Teschen, the grandson of his former Dresden patron. Instead, as he wrote to Ortes from Vienna on 17 July 1767, he started work on the two-act *festa teatrale Partenope*, performed less than two months later. This occasional text by Metastasio was intended for the engagement of Archduchess Maria Josepha to the future King of the Two Sicilies, Ferdinand IV. After Maria Josepha's sudden death on 28 May 1767, however, her sister Maria Amalia was substituted as Ferdinand's bride. One is thus reminded how political a Habsburg marriage could be, along with its attendant operatic displays. On the other hand, *Partenope* was revived without ceremony at Sans Souci, near Berlin, in summer 1775. It had its Viennese première on 9 September 1767, and Hasse wrote to Ortes a week later saying that 'the opening chorus [linked to the sinfonia] is one of the best things I have made'. It is indeed a brilliant movement for chorus (SATB) and orchestra with brass. The concluding quartet for the principal soloists (all sopranos) is also handsome, if shorter and more conventional. But Hasse confessed to Ortes that the scenery for *Partenope* did not please the public. Celestial singing heralded the appearance in a cloud of the Goddess of Love, seated on a clam shell and accompanied by Imeneo, Cupid, graces and genies. This scene went so badly, Hasse confessed, that little prevented the opera from ending with 'solemn laughter'. In closing his letter Hasse wrote of 'the desire to give up the theatre, which no longer suited him'. And yet he was to compose two more operatic works.

In November 1768 Hasse directed the first performance of *Piramo e Tisbe*, a chamber opera for three singers that rivals *Alcide al bivio* in quality and originality. It was not commissioned by Maria Theresa for a Habsburg wedding and so there is relatively little extant information about its performances. An unnamed French lady who paid for the work sang the role of Tisbe, while Tisbe's father was sung by the opera's librettist, Marco Coltellini; who sang Piramo remains unknown. In letters to Ortes about the opera and its later revisions Hasse described the acting with satisfaction but also mentioned the taxing work of composing. Commanded to ascend to the royal box after a performance at the country estate of Laxenburg, outside Vienna, on 15 October 1770, Hasse was given a 'magnificent ring' by the empress herself. 'After such success', he declared, 'it would be well to leave opera.' Certainly the opera has much fine orchestrally accompanied recitative, handsome arias – if less demanding technically than most other recent ones – and admirable ballet music.

The wedding of archduchess Maria Amalia with archduke Ferdinand of Parma took place on 25 August 1769 in Parma, but Metastasio and Hasse supplied a cantata in lieu of an opera for preliminary festivities in Vienna (21–30 June). In this work the glass harmonica combines with orchestra and soprano to illustrate references to sounds and nature in the poem 'Ah perche col canto mio'. Cecilia and Marianne Davies, close friends of the Hasse family, sang and played the harmonica respectively. Metastasio wrote later (16 January 1772) that the sisters performed so marvellously that one could not distinguish between them. Over time, the empress listened to many performances at court.

In correspondence to Ortes (12 January 1771) Hasse again wrote of wishing his most recent opera were his last, yet disclosing that the empress had requested him to write one more for the wedding in Milan of Archduke Ferdinand and Maria Beatrice d'Este later that year. This opera, both Metastasio's and Hasse's last, was difficult to write, as they protested in correspondence. Moreover, as Hasse told Ortes, 'the Milanese would like a lot of spectacle and the fewest possible recitatives. *Il Ruggiero* is certainly a well-written libretto, but is lacking in the former and abounding in the latter'. That the opera had initially been intended for the wedding in 1770 of Archduchess Maria Antonia (Marie Antoinette) and the dauphin of France (later Louis XVI) explains the medieval legend selected as plot, but not the lack of dances and choruses for which Hasse thought the Milanese had a taste, and which Mozart's *Ascanio in Alba*, the companion piece in Milan, successfully displayed.

Shortly before his departure from Vienna for Milan, Hasse suffered an attack of gout that lasted 20 days. In a letter of 5 October 1771 he told Ortes that he had to be transported in a bed within his carriage, attended by his daughter 'Pepina' (Maria Gioseffa). One cannot help wondering if the vexations of this commission (like the strife with the singer Mingotti in 1752, which had brought on his first major attack of gout) had something to do with his illness. But the trip to Milan was as beneficial as he had predicted in a letter of 17 July 1771, and when he reached Milan in late August – Mozart said 30 August – he was strong once again. In his letter of 17 July Hasse had said that he hoped for the best; but after the première on 16 October he reported: 'My *Ruggiero* had on the first evening all those mishaps that could possibly occur to injure a theatrical production'. Leopold wrote to his wife that 'Wolfgang's serenata has killed Hasse's opera more than I can say'. Wolfgang himself, however, was delighted with Hasse's opera and wrote to his sister on 2 November: 'There is a performance of Hasse's opera today, but as papa is not going out, I cannot be there. Fortunately, I know nearly all the arias by heart and so I can see and hear it at home in my head'. The opera may well be the weakest Hasse ever composed, but it was revived with a

new cast on 20 January 1772 at the Teatro S Carlo, Naples, in a production promoted no doubt by Maria Theresa's daughter Maria Carolina, married there to Ferdinand IV: like her Saxon cousin Maria Amalia a few decades earlier, she must have remembered Hasse fondly as her former tutor.

After a short stay with Ortes in Venice, Hasse and his daughter reached Vienna on Wednesday 27 November 1771 and had an audience with Maria Theresa the following day. She gave Pepina a golden box containing a pair of brilliant, luxurious earrings, while Hasse was given a bigger, more magnificent golden box with a portrait of Archduke Ferdinand on the cover and inside a ring of yellow and white gems. This box is cited in Hasse's testament of 20 September 1782 since he wished it given to his other daughter, Maria Cristina, married by that time to Giorgio Torniello (*I-Vas* notaio F. Dana).

Hasse was living in Vienna in August and September 1772 when Charles Burney eagerly visited Metastasio, Hasse, Gluck and others. In his travel accounts (published the following year) the Englishman summed up what most modern scholars believe had gradually emerged during the preceding decade.

> Party runs as high among poets, musicians and their adherents, at Vienna as elsewhere. Metastasio and Hasse may be said, to be at the head of one of the principal sects; and Calsabigi and Gluck of another. The first, regarding all innovations as quackery, adhere to the ancient form of the musical drama, in which the poet and musician claim equal attention from an audience; the bard in the recitatives and narrative parts; and the composer in the airs, duos and choruses. The second party depend *more* on theatrical effects, propriety of character, simplicity of diction, and of musical execution, than on, what *they* style flowery description, superfluous similes, sententious and cold morality, on one side, with tiresome symphonies, and long divisions, on the other.

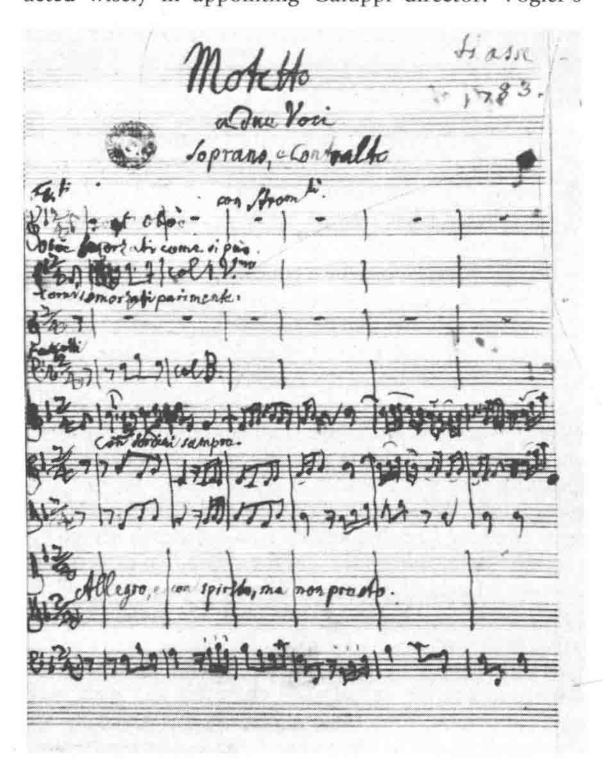
*(ii) Other works.* The patronage Hasse enjoyed during the 1760s gave rise to superb chamber music for solo singers unsurpassed by his Viennese contemporaries. If ever a conjecture should be accepted, it is that this music was heard, if not sung, by the imperial family, even though not all performers and occasions have yet been identified.

However, one clearly dated work written for the entire royal family is the earlier *Litania della B.V.M. cantata dalla famiglia imperiale* of 5 August 1762. Several manuscript copies identify the various members of the imperial family who took part in the performance, including the Empress Maria Theresa herself. What is particularly intriguing is the difficulty of several arias; while some melodies are limited in range and complexity, all demand considerable vocal training. Most impressive are two arias, as well as solo passages in the concluding movement, for Maria Theresa. Her relatively wide range and long melismas suggest considerable skill and the likelihood that many of Hasse's cantatas could have been intended for her, though her name appears on none as the dedicatee. A set of vocal solfeggi by Hasse is dated 1762 in a copy at *A-Wgm*.

Two earlier cantatas, or 'complimenti a 2', were written in 1760 for the archduchesses Maria Carolina, aged eight, and Maria Antonia, aged five, to celebrate the birthday of the empress on May 13 and that of her consort, Francis I, on 8 December. Both have texts by Metastasio. The music for the first, *Dove, amata germana*, is lost, but the second, *Apprendesti, o germana*, survives in an autograph (*I-Mc*) showing vocal parts commensurate with movements for these two children in the Litany of 1762, even if the accompaniments here are not merely for keyboard but for oboes and strings. An elaborate orchestral introduction begins like the sinfonia to *Zenobia* (1761). At the end of the *complimento* Hasse's score indicates that his *Il re pastore* must follow, but no surviving libretto documents a Viennese performance of this *festa* in 1760. What is particularly interesting is that Hasse was for a time the music tutor of these two archduchesses.

*La scusa*, a solo cantata for alto and orchestra, again with a Metastasian text, was performed in 1760, and in the following year Metastasio's *Amor prigioniero* for two sopranos and orchestra. Perhaps Hasse's daughters, Pepina and Cristina, performed in *Amor prigioniero* (or one like it) at a private academy given before Maria Theresa and her family, according to a letter of 28 February 1761 from the two daughters to Ortes. In this instance the orchestral introduction begins like the sinfonia to *Siroe* (1763). The only other indication of Pepina's singing ability appears in a letter from Ortes of 3 August 1771, in which he expresses the hope that whenever she comes to sing Hasse will accompany her on the harpsichord that Miss Davies has left in his Venetian residence.

Other Metastasian texts set orchestrally by Hasse in the early 1760s are *Il nome*, for alto, and *La gelosia* and *L'amor timido*, both for soprano. In 1775–6 we again encounter new orchestral cantatas: *La danza*, for soprano, and *Il ciclope*, for soprano and alto; these are his last known cantatas to Metastasian texts. Since these two works were written in Venice and near the end of Maria Theresa's life, they were surely not for her to sing. In cantata style, and possibly for Vienna, are the *Salve regina* in E♭ for soprano, alto and orchestra of 1766 and *Quivi pur vi ti veggio*, Hasse's only motet with Italian text for soprano and orchestra (1767).



Hasse's last two oratorios are his recomposed *Sant' Elena al Calvario* and *Il cantico de' tre fanciulli*. The first was supplied gratis to Vienna's Tonkünstler-Societät at the urging of Count Johann Wenzel Sporck (reported in Hasse's letter to Ortes, 24 October 1772) and of his esteemed friend Florian Gassmann, first director of the society. *Sant'Elena* was the second oratorio of the society's first season and Hasse laboured on it diligently but eagerly throughout October and November 1772. On 17 and 20 December the new version received its première in the royal Schauspielhaus at the Kärntnertor by 180 players, solo singers and choristers under Hasse's direction. He wrote to Ortes (19 December) that he could not remember any work in many years succeeding so well. Hasse also declared that if he wrote nothing more, he had the consolation of having finished well, and that he had never done anything so grand and been so excellently served by all performers. *Sant'Elena* was revived in two subsequent seasons: 21 and 25 March 1773 while Hasse was still in Vienna, and on 22 and 23 December 1781 when he was living in Venice.

In the society's third season (1774) Hasse's *Il cantico*, also reworked for an enlarged orchestra and with new music including four large choruses, was given in his absence on 18 and 21 December. Long and detailed tempo and articulation markings in his autograph score (*I-Mc*) are probably substitutes for oral instructions Hasse would have given at rehearsals. In sum, Hasse's two oratorios

account for half the performances of the Tonkünstler-Societät during its first three years.

8. Last years in Venice. Numerous letters to Ortes, full of plans to move his family (including Faustina, both daughters and their servants Franz and Annetta), indicate relatively modest living needs. In late April 1773 they finally brought their belongings to Venice, where they initially stayed in Ortes' residence. During the final decade of his life Hasse kept himself busy composing, revising earlier works and teaching. He travelled little. Among revised works are several originally composed for the Incurabili, presumably reworked for the singers there in the 1770s. His two *Miserere* settings of the 1730s arranged for mixed chorus, possibly for the Dresden court, a *Te Deum* of 1776, a mass of 1770 dedicated to the elector's widow Maria Antonia Walpurgis and two more for the Dresden court dated 1780 and 1783 (those of 1779 and 1780 exist in earlier versions), and motets (probably new) to be sung after the Credo indicate Hasse's continuing creative powers (fig.3). The care with which he phrased and articulated passages is particularly striking. Often he gave lengthy performing instructions; for example, the Kyrie of his Mass in D (1780) is marked 'Andante di molto, staccato, e sempre forte'. The Christe begins 'Un poco andante, ma non flebile' (*D-Dl*).

The *Te Deum* allegedly conducted by Galuppi on 16 May 1782 in Venice, at the SS Giovanni e Paolo basilica for the visit of Pope Pius VI, has not been identified, unless it was the *Te Deum* in G of 1776. Hasse and Galuppi had long been friends. Galuppi had used a Hasse *Miserere* to follow performances of an oratorio of his own in 1763. In 1768 Hasse wrote to Ortes that the Incurabili had acted wisely in appointing Galuppi director. Vogler's penetrating observations in 1778 about Galuppi's *L'Olimpiade* (1747) and other music probably represent the opinions of Hasse, with whom he had studied and been closely associated between 1774 and 1776. Mennicke (B1906) cites other composers whom Hasse befriended or even taught in the 1770s, including Angelo Baldan, J.G. Naumann, Joseph Schuster and J.G. Schwanenberger. He also tutored opera singers such as Cecilia Davies and Elisabeth Teyber. Since such singers hardly needed coaching in the mechanics of music and, though foreigners, probably knew Italian well, Hasse must have taught them the nuanced shaping of lines.

*3. Autograph MS of the opening of Hasse's motet 'Ad te levavi anima mea', 1783 (I-Mc 466, f.2r); written for insertion after the Credo of the Mass in G minor, 1783*

The Incurabili had financial problems in the mid-1770s, and theirs was probably the Venetian bankruptcy in which (according to the *Musikalischer Almanach für Deutschland*, 1784) Hasse lost much of his wealth. On 4 November 1781 Faustina died, and on 20 September 1782 Hasse made his will (*I-Vas*), in which he wrote: 'As regards my musical papers, if the Lord God grant me yet a little time on earth, I will put them in better order and tell Maria Gioseffa verbally what I wish her to do with them'. More than once he referred to Maria Gioseffa as his 'most affectionate and most beloved elder daughter'. He also cited a few portraits of Faustina and himself, along with gifts from prominent patrons to be given to his children, daughter-in-law and grandchild. He died in December of the following year after suffering from acute arthritis; his burial in S Marcuola across the square from his house was attended by his daughter but probably few others. He was virtually forgotten in Venice until F.S. Kandler financed a gravestone, still to be seen in S Marcuola, and wrote a biography in 1820.

9. Reputation. Fétis observed that few composers have been as famous as Hasse and yet as quickly forgotten. One city where his works continued to be performed was Dresden, where Naumann established the tradition of giving Hasse's sacred works on principal feast days. His D minor Mass and a *Te Deum* (both 1751) and his *Regina caeli* setting were given into the 20th century. The Hofkapelle in Vienna also cultivated a handful of his sacred works throughout the 19th century, including a version of his Litany of 1762 for a much expanded orchestra and mixed chorus (in *A-Wn*). Until Frederick the Great's death in 1786, Hasse's operas, sacred works and flute pieces were regularly performed in Berlin. Thereafter only occasional revivals of oratorios took place in north Germany for a few decades into the next century. In Italy his music was almost completely neglected, as though no-one had taken seriously G.B. Mancini's claim of 1775 that Hasse was the 'Padre della musica'. A lament by J.A. Hiller was the only music composed on Hasse's death. Hiller, who knew Hasse, published his arias with written-out ornamentation (*Sechs italiänische Arien*, 1778), as well as a keyboard reduction of *Die Pilgrimme auf Golgotha* (1784), a German version of the oratorio *I pellegrini* (1742) which he had copied in 1754 (*D-Bsb*). He also praised Hasse in his books, including *Beyträge zur wahren Kirchenmusik* (Leipzig, 2/1791, attributed in part to Hasse). Hiller tried to promote Hasse's sacred music in German translation, and the anthology *Meisterstücke des italiänischen Gesanges* (1791) was to have been followed by a collection of other works. Among German writers, Hiller's enthusiasm for Hasse was matched by that of Gerber, who reported Hasse's opinions and deeds in articles on many different

composers, and copied Hasse's *L'Olimpiade* and Litany in G in 1768 and 1790 (*F-Pc*). Simon Molitor and R.G. Kiesewetter also collected Hasse's scores and the latter performed a *Miserere* privately in Vienna between 1816 and 1820. Koch (F1989) cites other collector-performers.

Hasse's autograph scores, to which he referred in his testament, went ultimately to the Milan Conservatory; the *Allgemeine musikalische Zeitung* reported their acquisition on 23 July 1817. They were unknown to early 20th-century scholars, and were not identified as Hasse autographs until 1965 by Sven Hansell. Numerous copies showing corrections and amplifications in Hasse's hand survive (*D-Bsb*, *Dl*, *Hs* and elsewhere). The largest group of letters are the 97 written to Giammaria Ortes (*I-Vmc*); some others are also extant (*A-Wn*, *D-Dla*, *I-MOe*, *Rsc*). The last two decades of the 20th century witnessed a remarkable increase in research on Hasse resulting in the publication of important monographs, congress reports, editions and articles and the founding of a Hasse Gesellschaft in Bergedorf (Hamburg).

10. MUSICAL STYLE. The German-born Hasse's central place in Italian mainstream music represents one of the most intriguing chapters in 18th-century musical history, the more so since he was the favourite composer of Metastasio, the librettist thought most skilled at displaying rational control over emotional states to ensure good taste. In the 1760s, as he increasingly enjoyed the direct patronage of Maria Theresa in Vienna, the excellence of his operatic style as well as his personal character were equated with Metastasio's, his friend and closest collaborator. Moreover, Hasse's music served several generations of singers as a touchstone for their abilities. The apparent absence on paper of disrupting dramatic effects would seem to allow the vocal line and its text a continuity and consistency of refined feeling.

Yet there is at times an undercurrent of dramatic power that, if singers wished, could be brought to the surface. Thanks to the way Hasse conceived and notated his music, much emotional feeling can be coaxed forth. Ornamentation and other melodic nuances can be pushed beyond mere decoration displaying vocal technique. Heightened expressive liberties are encouraged by Hasse's unusually long descriptive 'tempo indications' of the 1760s and 70s. Perhaps there is also something to be read into his German origins, and also into the way that, although he always had extremely fine singers, he ceaselessly strove to flatter their strengths when composing, and painstakingly coached them before each première. Short of ugly sounds, he may have tolerated and even desired expressive emotional performance entailing dynamic and other vocal contrasts. If nothing else, this view should discourage the modern use of light chamber voices and countertenors rather than highly flexible female sopranos and altos for castrato roles.

When Hasse began replacing da capo arias with abridged da capo and through-composed arias, he participated in a general trend that seemed to heighten the subtle manipulating of musical ideas and a concomitant transforming of emotional states without disrupting balances or otherwise intruding upon the semblance of inherent musical logic. Through-composed arias recall the solo arias in Hasse's liturgical works such as the psalm, hymn and Marian antiphon settings. Initially designed, perhaps, to discourage virtuoso extemporization, their through-composed form was chiefly determined by the circumstance that sections of a liturgical text are not easily repeated after contrasting texts have been heard. That Hasse was able to set medieval Latin poetry with irregular verse lines as though it conformed to the rules of 18th-century Italian prosody was no small achievement; it may be reckoned an exercise that taught him how to compose operatic arias without relying on the da capo form to ensure balance and simplicity.

Along with varied lengths and shapes of phrases grew a mix of rhythmic gestures and articulations that clearly differentiate Hasse's early, middle and late scores. The rhythmic life of his late music may well have been the aspect that made the greatest impact on other composers. That there is gentle sensuality, proud resolve and many other nuances of feeling to be teased out of Hasse's music is suggested especially by his singers' lines and their subtly varied rhythmic details. Perhaps the appeal of the fantastic towards the end of his career (e.g. in *Alcide al bivio*, 1760, and *Partenope*, 1767) and its manifestation in the early operas with supernatural scenes (the accompanied recitatives in *Artaserse*, 1730, and *Cleofide*, 1731) and in various motets may be viewed as symptomatic of a creative imagination eager to portray a multitude of shifting mental states. On paper Hasse's recitatives and arias may seem to declare emotional restraint, if not detachment, as if these qualities inhered in Hasse's music and Metastasio's poetry. And yet the widespread 18th-century enthusiasm for specific singers and their vocal interpretations must belie our modern suppression of distinctively individual techniques and manners of representation.

Burney, the most articulate reporter to meet Hasse and describe his music, wrote of the composer's 'throwing the strongest light' on the singer's line. By this he may have meant no more than the differentiating of a nicely highlighted vocal line from its appropriately shaded accompaniment. At the same time, it seems possible that Burney wished to convey the idea that there is a modelling of arresting features to be highlighted, as in portraits by Mengs, to name but one painter well known to Hasse, Burney and contemporary connoisseurs of 18th-century art in London, Dresden and elsewhere. Burney wrote that Hasse was:

> the most natural, elegant, and judicious composer of vocal music, as well as the most voluminous now alive; equally a friend to poetry and the voice, he discovers as much judgment as genius, in expressing words, as well as in accompanying those sweet and tender melodies, which he gives to the singer. Always regarding the voice, as the first object of attention in a theatre, he never suffocates it, by the learned jargon of a multiplicity of instruments and subjects; but is as careful of preserving its importance as a painter, of throwing the strongest light upon the capital figure of his piece.

WORKS

† – *lacks recitatives*

OPERAS

*opere serie in 3 acts unless otherwise stated*

Antioco (B. Feind, after A. Zeno and P. Pariati), Brunswick, Hof, 11 Aug 1721, 6 arias *D-SWl*

Il Sesostrate (A. Carasale, after Pariati), Naples, S Bartolomeo, 13 May 1726, rev. 28 Aug 1726, *A-Wgm*, arias *D-MÜs*, *I-Nc*, *US-Wc*

L'Astarto (Zeno and Pariati), Naples, S Bartolomeo, Dec 1726, *I-MC*

Gerone tiranno di Siracusa (after A. Aureli), Naples, S Bartolomeo, 19 Nov 1727, *A-Wn*, *D-Hs*, *I-Mc** (Acts 2 and 3), *MC*, arias *Nc*

Attalo, re di Bitinia (F. Silvani) Naples, S Bartolomeo, May 1728, *D-Dl* (sinfonia), *Hs* (incl. int Carlotta e Pantaleone), *I-MC*, *Vnm*

L'Ulderica, Naples, S Bartolomeo, 29 Jan 1729, arias and duets *A-Wn*, *D-Dl*, *Hs*, *MÜs*, *GB-Lbl*, *I-Mc*, *MC*, *Nc*, *Rc*

La sorella amante (Lavinia) (commedia per musica, 2, B. Saddumene), Naples, Nuovo, spr. 1729; Valletta (Malta), Manuel, 1736, *D-Dl**

Tigrane (Silvani), Naples, S Bartolomeo, 4 Nov 1729, rev. A. Palella, Naples, S Carlo, 4 Nov 1745, *A-Wgm*, 13 arias, duet *D-MEIr*, *GB-CDp*†, *Lam*, *Ob*, *I-Mc**

Artaserse (P. Metastasio, rev. G. Boldini), Venice, S Giovanni Grisostomo, Feb 1730, *D-MÜs*, *GB-Cfm*, *Lam*, *Lbl* (2 copies, incl. 1734 pasticcio), *I-Mc* (Act 1), *Nc*†, *Vnm*, *US-Wc*; rev. Dresden, Hof, 9 Sept 1740, *A-Wn*, *D-Bsb*, *Dl* (2 copies, incl. vs), *Hs*†, *SWl* (sinfonia, 25 arias, pts), *F-Pc* (inc.), *US-NH*, *Wc*; rev. Naples, S Carlo, 20 Jan 1760, *D-Dl*, *F-Pc*, *I-Mc*, *Nc*, *P-La* (2 copies), *US-Wc*; *A-Wgm*, *Wn*, *B-Bc*, *D-Hs*, *LEm*, *LEmi*, *GB-Lbl*, *I-MC* (Acts 1 and 3), *US-NH*

Dalisa (Lalli, after N. Minato), Venice, S Samuele, May 1730, arias and duets *A-Wn*, *D-Dl*, *Mbs*, *MÜs*, *Rtt*, *F-Pc*, *GB-Ob*, *I-MC*

Arminio [1st version] (A. Salvi), Milan, Regio Ducal, 28 Aug 1730, arias *A-Wn*, *B-Bc*, *D-Dl*, *Hs*, *Mbs*, *MÜs*, *F-Pn*, *GB-Lbl*, *Ob*, *I-MC*

Ezio (Metastasio), Naples, S Bartolomeo, aut. 1730, *GB-Lbl*; rev. Bayreuth, Margrave, 23 Sept 1748; rev. Dresden, Hof, 20 Jan 1755, *B-Br*, *D-Dl*, *Hs*, *US-Wc*; *A-Wn*, *B-Bc* (2 copies incl. vs), *D-As* (2 copies), *Bsb*† (2 copies, incl. vs), *Dl*†, *LEmi*, *WERhb* (vs), *WRz*, *F-Pc*†, *GB-Lbl*, *I-Mc** (?1755)

Cleofide (Alessandro nell'Indie) (M.A. Boccardi, after Metastasio), Dresden, *D-Bsb* (2 copies, 1 without recits), 13 Sept 1731, *Dl* (2 copies, incl. vs), *Hs*, *LEm*, *Mbs*, *Mbs*†, *F-Pc*; rev. Venice, S Giovanni Grisostomo, 4 Nov 1736, *GB-Lbl*; rev. ?Venice, carn. 1738, carn. 1743, *B-Bc*, *D-HAmi*, *Rtt* (sinfonia pts), *F-Pc*†, *GB-CDp*, *I-Vnm*; aria with ornamentation by Frederick the Great, facs. with edn by W. Goldhan (Wiesbaden, 1991)

Catone in Utica (Metastasio), Turin, Regio, 26 Dec 1731, arias *D-Dl*, *Mbs*, *MÜs*, *F-Pc*, *Pn*, *GB-Lbl*, *I-Mc*, *MC*

Cajo Fabricio (after Zeno), Rome, Capranica, 12 Jan 1732, *D-MÜs*, *F-Pc*, *US-Cn*; rev. Naples, S Bartolomeo, wint. 1733; rev. Dresden, Hof, 8 July 1734, ?*A-Wgm*, *D-Dl*; as Pirro, Jaromeritz, Schloss Questenberg, aut. 1734, *I-Mc**; rev. Berlin, Hof, Sept 1766, *D-Bsb*; *B-Bc*, *Br*, *D-Bsb* (addl sinfonia), *Hs* (1733 London pasticcio), *I-Vc** (after 1740), *US-Wc*

Demetrio (Metastasio), Venice, S Giovanni Grisostomo, Jan 1732, *I-Vnm*; as Cleonice, Vienna, ?court, Feb 1734; as Demetrio, Venice, S Cassiano, carn. 1737; as Cleonice, Dresden, Hof, 8 Feb 1740, *B-Bc*, *D-Dl*, *Hs* (Act 2), *LEmi*; as Cleonice, Venice, S Angelo, 1740; as Demetrio, Venice, S Giovanni Grisostomo, carn. 1747; *A-Wn* (1739 Reggio pasticcio), *D-Bsb* (sinfonia), *Dl* (vs, pts), *F-Pc*

Euristeo (Lalli, after Zeno), Venice, S Samuele, May 1732, *B-Bc*, *D-Dl* (with sinfonia), *F-Pc* (1733, Warsaw)

Issipile (Metastasio), Naples, S Bartolomeo, 1 Oct 1732, 14 arias *D-MÜs*; rev. Leo, Naples, S Carlo, 19 Dec 1742; rev. Cafaro, Naples, S Carlo, 26 Dec 1763; *A-Wgm* (Acts 1 and 2), *I-Mc* (Act 1), *MC*, *Tco* (inc.)

Siroe re di Persia (Metastasio), Bologna, Malvezzi, 2 May 1733, *A-Wn*, *D-Dl*, *F-Pc*, *GB-Lbl*†; rev. Naples, S Carlo, 4 Nov 1747; rev. Dresden, Hof, carn. 1763, *D-Dl*, *Hs**; *A-Wn* (facs. in IOB, xxxiii, 1977), *B-Bc* (2 copies), *D-Bsb* (1763, Warsaw), *Dl* (sinfonia score and pts), *GB-Cfm* (14 arias), *Lbl*, *Lcm* (7 arias), *I-Mc** (1762, Warsaw), *Nc* (recits), *Vnm*, *S-Skma*†, *US-Wc* (1763)

Senz'attender che di maggio (cant. [prol]), S, orch, Dresden, 1734, *D-Dl*

S Petrus et S Maria Magdalena, Venice, Incurabili 1758 [history of Incurabili perfs. not established; different Miserere settings followed this work in 1760s (Koch, F1989)], *A-Wn* (2 copies), *CH-Zz* (score, parts), *D-Bsb*, *Dl* (2 copies, parts), *LEm*, *MÜs*, *GB-Er*, *Ob* Tenbury

La conversione di Sant'Agostino (Maria Antonia Walpurgis), Dresden, Taschenberg Palace, 28 March 1750, rev. Dresden, later 1750s, and Italy, 1760s, *A-Wgm*, *Wn*, *B-Bc*, *D-Bsb* (3 copies, plus 1 in Amalien collection), *BDk* (2 copies), *Dl* (3 copies, orig. parts (1750) for Dresden: 2477-D21a), *LEu* (pt 1), *Mbs*, *F-Pc*, *Pn*, *GB-Ob* Tenbury (1773 copy of orig. version), *I-BRc*, *I-Mc** (mostly orig. version), *Pca* (score, parts), *Vnm* (2 copies, parts), *US-Bp*; ed. in DDT, xx (1905)

Doubtful: Isacco figura del Redentore (Metastasio), *F-Pc* (attrib. Hasse, probably by M. Martinez); La morte di Cristo (pasticcio), *D-Mbs* (incl. arias by Hasse); Moses, *Mbs* (probably not by Hasse); La Passione del Redentore, *GB-Ob* (attrib. Hasse); La religione trionfante, *B-Br* (attrib. Hasse)

CANTATAS

*with basso continuo*

Ad onta del timore, S, *US-Wc* (? by N. Porpora); Ah, per pietade almeno, S, *B-Bc*, *GB-Lam*, *US-NHplamenac*; Appena affisi in due begl'occhi, S, *US-Wc*; Aura liete intorno a Clori, A, *D-MÜs*, *US-NHplamenac*; Bella, mi parto, oh Dio (Fille, mi parto, addio), A, *D-Bsb*, *I-PLcon*; Cadrò, ma i Filistei (Sansone), B, *PAc* (? by A. Caldara); Care luci che splendete, S, *US-Wc*; Caro Padre, *D-Hs*; Chieggio ai gigli ed alle rose, S, *GB-Lbl*; Chi mi toglie, *D-Hs*; Clori, mio ben, cor mio, S, *A-Wn*, *I-MC*; Credi, o caro, alla speranza, S, *GB-Lbl*; Dalle tenebre orrende (Orfeo ed Euridice), 2 S, *D-Bsb*, *I-Rsc*, *Vnm*; Di chi ti lagni, S, *GB-Cfm*; Ecco l'ora fatal, S, 1745, *B-Bc*, *D-Hs*, *GB-Lbl*, *I-Bc*, *US-NHplamenac*; Fatal forza, S, *I-Vnm*; Filli mia di vaghi fiori, A, *GB-Lam*, *S-SK*

Già il so verso l'occaso, S, *A-Wn*; Infelice Amarilli, che pensi, S, *US-BEm*; Irene, amata Irene, idolo mio, A/S, *B-Bc*, *D-MÜs*, *GB-Lam*, *I-BGc*, *Nc*; Lascia i fior, l'erbette e 'l rio, S (London, 1751), *D-MEIr*, *GB-Lbl*; La tua rara bellezza, A, *US-NHplamenac*; Long tems par une rigueur feinte, A, *GB-Bu*; L'ora fatale, *D-Hs*; L'ori mio ben, cuor mio, S, *I-MC*; Lungi d'ogni amoroso aspro tormento, S, *GB-Lbl*; Mirzia, già l'aria intorno, S, *B-Bc*; Oh Dio! partir conviene, A (London, 1751), *I-Nc*; Oh numi eterni! Oh stelle, S, *MC*, *US-BEm*; O pace del mio cor, S, *B-Bc*, *I-Mc*, *Nc*; Orgoglioso fiumicello (Inciampo) (P. Metastasio), S, 1732 (London, n.d.), *B-Bc*, *D-MEIr*, *GB-Lbl* (3 copies, 1 for A), *Lcm*, *I-PLcon*, *S-Skma*

Parto, mia Filli, è vero, S, *GB-Lcm*; Perchè leggiadra Irene, S, *I-Mc*, *PAc*; Povero fior di Clizia, S, *US-Wc* (? by Porpora); Povero giglio, oh Dio, A, 1729, *I-Nc*; Pur ti stringo in questo petto, S (London, 1751), *D-Hs*, *MÜs*, *GB-Bu*, *Lam*, *Lbl*, *I-Mc*, *US-NHplamenac*; Se al ciglia l'usingiuro, *D-Hs*; Tanto dunque è si reo, A, *GB-Lbl*; Trà l'odorose piante, S, *Lam*; Tutto amore, e tutto fede, S, *Bu*, *Lbl*, *US-NHplamenac*; Va cogliendo, la mia Clori, S (London, 1751), *A-Wn*, *CH-E*, *D-MEIr*, *GB-Lam*; Veggio la vaga Fille (P. Rolli), S, *A-Wn*; Vieni dell'alma mia, S, *I-Vnm*; Vien la speranza, *D-Hs*

*with 1 or 2 obbligato instruments and continuo*

Bell'aurora che d'intorno, A/S, vn, *GB-Bu*, *Ob*; Clori, mia vita, tu che di questo cor, A, 2 vn, *I-Mc* (3 copies); Direi ma fosse pria di dirti, S, 2 vn, lost; E pur odo o non moro, S, 2 vn, *I-Mc*; Fille, dolce mio bene, S, fl/vn, *D-MEIr*, *GB-Lam*, *Lbl*, *I-PAc*, *S-SK*; Ho fuggito Amor anch'io (P. Rolli), S, 2 vn, *I-Mc*; La fiamma che nel seno, A/S, fl/vn, *D-Bsb*, *I-Nc*, *S-SK*; Mentre Clori la bella, S, 2 fl, *F-Pc*; Pallido il volto, S, fl/vn, *D-Bsb*, *F-Pc*, *I-MC*; Passa da pene in pene, A, fl/vn, *D-MÜs*, *GB-Lam*, *Lbl* (2 copies); Per palesarti appieno, S, 2 rec/fl/vn (London, 1751); Pur deggio partire, S, 2 vn, *I-Mc*; Quel vago seno, ò Fille, S, fl, *D-MÜs*, *GB-Lcm*, *I-BGc*, *Nc*, *S-Skma*; Se il cantor trace, oh Dio, A, 2 vn, *D-Bsb*; Solitudini campestre (Rolli), S, 2 vn, *I-Mc*; Vaga madre di cari diletti (Adone) (Rolli), S, 2 vn, *Mc*

Arias from cants. (P. Rolli), S, 2 vn, bc, probably late 1720s, all *I-Mc*: Che bel piacer veder; Chiamarlo menzognero; Godo di mille cori; Non parlarmi più d'amor; Stemprar se potess'io; Vola, pietosa auretta

Arias from canzonettas (P. Rolli), S, 2 vn, bc, late 1720s, *I-Mc* unless otherwise stated: Ardor pietà diletto; Della noiosa estata; Dite almeno, amiche fronde; Dite che non mi lagno; Domando al core; La bionda Eurilla; Lo splendor del primo sguardo; Nò mia bella, il sol diletto; Prove son speranza e onore; Solitario bosco ombroso, *Nc*; Tu fai la superbetta; Una biondina

*with orchestra*

**Hasse, Faustina.** *See* BORDONI, FAUSTINA.

**Hasse, Karl** (*b* Dohna, nr Dresden, 20 March 1883; *d* Cologne, 31 July 1960). German composer, conductor and musicologist. He studied in Leipzig with Riemann and Kretzschmar at the university and with Straube, Ruthhardt and Nikisch at the conservatory. Subsequently he was a pupil of Reger and Mottl in Munich. From 1907 he assisted Wolfrum at Heidelberg University and in the Bachverein there. He was appointed organist and Kantor at the Johanniskirche, Chemnitz, in 1909, and music director in Osnabrück the next year. Having established a conservatory in that city, he took a post as music director and professor extraordinary at Tübingen University (1919), where he obtained his doctorate (1923) and founded both the music institute and the university music department. An enthusiastic proponent of the Third Reich, he was particularly active from 1933 onwards in furnishing musicological material to support the regime, and was rewarded for his loyalty in 1935 by being appointed director of the Staatliche Hochschule in Cologne, a post he retained until his retirement at the end of the war. Apart from these academic activities he did varied work as a practising musician and musicologist; he was, notably, one of the first to write a comprehensive study of Reger. His music never departed from the tradition which led back through Reger to Bach: craft and coherence were more important to him than personal expression or originality.

WORKS
(*selective list*)

Orch: Serenade, op.5, str orch, perf. 1909; Suite in alten Form, op.11, perf. 1913; Symphonische Variationen über das Lied 'Prinz Eugen', op.17, perf. 1915; Vn Conc. no.1, op.28, perf. 1924; Präludium und Passacaglia, op.30, perf. 1924; Vorspiel und Fuge, op.35, perf. 1926; Pf Conc., d, op.61, perf. 1938; Symphonic Suite, F, op.65, perf. 1940; Toccata, Passacaglia und Fuge, op.70, pf, orch, perf. 1939; Vn Conc. no.2, op.93; Vc Conc., op.102; Sym., g, op.109.

HANSPETER KRELLMANN/ERIK LEVI

**Hasselbeck, Rosa.** *See* SUCHER, ROSA.

**Hassell, Jon** (*b* Memphis, 22 March 1937). American composer and trumpet player. After studying the trumpet, he received a DAAD grant to study composition in Cologne with Stockhausen and Pousseur (1965–7) and pursued further study at the Eastman School of Music (BM 1969, MM 1970), where his teachers included Bernard Rogers. During the late 1960s he performed with ensembles led by Terry Riley and La Monte Young and composed works reflecting the influences of electronic music and minimalism. He has described *Solid State* (1969) as surrounding the audience with 'vibrational forms evoking the . . . shift of sand dunes'. In 1972 he began to study Indian music with Pandit Pran Nath, developing a quasi-vocal style of trumpet playing that has enabled him to 'curve' melodic lines – manipulating pitches with his lips, or by loosening or removing the mouthpiece – which are often unrecognizable as being played by a trumpet. He has combined this technique with elements from electronic and free jazz to create syntheses of African, Asian and Western musics, what he calls 'Fourth World' music, suggesting a combination of Third World musics and First World electronic experimentation. The dense, muted timbres, complex repetitive rhythms and sophisticated heterophony of his output after 1977 have been influential to musicians working in genres that cross between popular and art styles. His compositions include dance scores for Merce Cunningham, MOMIX, Dai Rakuda Kan and Alvin Ailey, and collaborations with Brian Eno, Peter Gabriel, Talking Heads, David Sylvian and the West African ensemble Farafina; his stage works often involve gently political attitudes. The Jon Hassell Concert Group has performed at major venues and festivals internationally.

WORKS

Stage: Sulla astrada (music theatre, after J. Kerouac: *On the Road*), 1982, Venice, May 1982, collab. M. Criminali; Zangezi, 1983–4
Other works: Music for Vibs, 1965; Blackboard Piece with Girls and Loops, 2 girls, 2 pitch-producing blackboards, 1968; Landscape Series, mixed media, 1969–72; Map nos.1–2, hand-held magnetic playback heads, 1969; Solid State, 2 synth, 1969; Superball, 4 players with hand-held magnetic tape heads, 1969; Pano da costa, str qt, 1987; Rainforest, installation, 1989

PAUL ATTINELLO

**Hasselmans.** Belgian-French family of musicians.

(1) **Josef H. Hasselmans** (*b* Antwerp, 1814; *d* Paris, 1902). Belgian conductor, harpist and violinist. He studied the harp in Paris with Antoine Prumier; he also studied the violin and became first violinist with the orchestra of the Théâtre Royal, Antwerp, and later its conductor. His career continued at Strasbourg where he conducted the orchestra of the Théâtre Municipal, and in 1854 he became the first director of the Strasbourg Conservatoire. In January 1858 he met Wagner who came to hear Hasselmans conduct the *Tannhäuser* overture as the prelude to a French play at the Théâtre Municipal; Wagner mentioned this incident in *Mein Leben* and referred to Hasselmans as 'a very good-natured, amiable fellow'. He was a respected teacher as well as a creditable

conductor, and may be remembered for two major schools of double-action harp playing which stemmed from his tutelage: the French school established by his son (2) Alphonse Hasselmans, and the German school established by his pupil Ludwig Grimm, who taught many leading German and Russian harpists including Ferdinand Hummel, Wilhelm Posse and Albert Zabel.

(2) **Alphonse (Jean) Hasselmans** (*b* Liège, 5 March 1845; *d* Paris, 10 May 1912). French harpist and composer of Belgian birth, son of (1) Josef H. Hasselmans. He first studied the harp with his father at the Strasbourg Conservatoire, then with Gottlieb Krüger in Stuttgart and Ange-Conrad Prumier (son of Antoine Prumier) in Paris. The early part of his career was spent in Brussels, where he became harpist at the Théâtre de la Monnaie. In 1877 eight successful solo concerts in Paris brought him appointments as solo harpist with the Paris orchestras of the Conservatoire, Opéra and Opéra-Comique. In 1884 he succeeded his teacher Prumier as professor of the harp at the Conservatoire. He revised the harp course, and the principles of his teaching appear in his article, 'La harpe et sa technique' (*EMDC*, I/iii (1913), 1935–41).

A virtuoso renowned for sonority, Hasselmans was also a significant force in the revival of harp playing at the turn of the century. A large number of compositions were inspired by his performance and dedicated to him, adding much of technical value to the repertory of the instrument. He wrote 54 pieces for the harp, including *Gitana* op.21, *La Source* op.44, *Trois Préludes* opp.51–3 and many studies and arrangements. His pupils included Marcel Grandjany, Pierre Jamet and Carlos Salzado.

(3) **Louis Hasselmans** (*b* Paris, 15 July 1878; *d* San Juan, Puerto Rico, 27 Dec 1957). French conductor and cellist, son of (2) Alphonse Hasselmans. He was a pupil of Lavignac, Godard and Massenet and he studied the cello under Jules Delsart at the Paris Conservatoire, where he won a *premier prix* for cello in 1893. He then toured Europe with the Caplet Quartet for six years. He made his conducting début in 1905 with the Lamoureux Orchestra, and continued his career directing the orchestras of the Opéra-Comique (1909–11, 1919–22), Montreal Opera Company and Marseilles Concerts Classiques (1911–13), Chicago Opera Association (1918–19) and the Metropolitan Opera (French repertory) (1922–36). He was on the staff of the Louisiana State University School of Music from 1936 until 1948, when he resumed his conducting activities in Europe, eventually settling in Aix-en-Provence.

ALICE LAWSON ABER-COUNT

**Hassen.** *See* HASSE family.

**Hassid, Josef** (*b* Suwałki, Dec 1923; *d* Epsom, 7 Nov 1950). Polish violinist. He first played in pulic at the age of eight and studied with Mieczysław Michaelowicz and Irena Dubinska in Warsaw. In 1937, at the instigation of Huberman, he joined Carl Flesch's course at Spa, Belgium, and in 1938 came to Britain for further studies with Flesch. He first appeared in London in a charity concert and shortly afterwards made his orchestral début playing the Tchaikovsky Concerto with the LPO. In 1940 he made a highly successful Wigmore Hall début with Gerald Moore. Prior to Hassid's concert appearances, he made recordings of genre pieces by Tchaikovsky, Elgar, Sarasate and others with Gerald Moore for HMV. He subsequently appeared in two more concerts at the Queen's Hall, playing the Beethoven and Brahms concertos. In 1941 HMV offered Hassid a three-year contract to record works including the Walton Concerto; but the onset of schizophrenia prevented him taking up the offer. He never played in public again and was confined to hospital, where he died after an unsuccessful leucotomy. The four recordings with Moore are all that remain of one whom Flesch claimed was the greatest talent he had ever encountered. They reveal his impeccable technique and dramatic, impassioned style.

MARGARET CAMPBELL

**Hassler.** German family of musicians.

(1) **Isaak Hassler** [Haissler, Hasler] (*b* Joachimsthal, *c*1530; *d* Nuremberg, bur. 14 July 1591). Organist. His parents left Nuremberg in 1526 for Joachimsthal, a prosperous town at the centre of a local silver-mining industry. His teachers in Joachimsthal were Johann Matthesius, headmaster of the local school and first biographer of Luther, and the Kantor Nicolaus Herman, a noted poet and composer of hymn tunes. Isaak moved to Nuremberg in 1554 and married in the following year. He worked as a lapidary and, despite persistent ill-health, also gained a reputation as an 'eminent musician'; from 1558 until his death, he served as organist at the Spitalkirche. He must have been a man of some means, for he eventually owned a house in Nuremberg. All three of his sons became musicians of stature.

(2) **Hans [Johann] Leo Hassler** [Haslerus] (*b* Nuremberg, bap. 26 Oct 1564; *d* Frankfurt, 8 June 1612). Composer, son of (1) Isaak Hassler. Following his early training in Nuremberg, Hans Leo became one of the first in a long line of German musicians who journeyed south of the Alps for study in Italian musical centres. After a sojourn in Venice in 1584–5, he played a pivotal role in the then-flourishing dissemination of italianate formal and stylistic idioms in Germany. His compositional efforts in several vocal genres, including his published collections of canzonettas, masses, motets and lieder, were widely circulated and notably influential. Hassler was also active throughout his life as an organist and consultant to organ builders. While he published no instrumental music during his lifetime, a substantial repertory of keyboard works attributable to him survives in manuscript, and among these are compositions remarkable in both scope and quality.

1. LIFE. Like his brothers (3) Kaspar and (4) Jakob Hassler, Hans Leo appears to have received his introduction to music from his father. By his own testimony, he quickly developed facility at the keyboard: in the dedication to his 1591 *Cantiones sacrae* he noted that he was

'from a tender age more talkative with the fingers than with the tongue'. During his youth in Nuremberg, Hassler would surely have come into contact with Leonhard Lechner, who held the title 'archimusicus' in the city of Nuremberg from 1575 to 1585.

In 1584 Hassler left Nuremberg to continue his education in Venice. It may have been Friedrich Lindner, Kantor of the Egidienkirche in Nuremberg, who encouraged Hassler to spend time in Italy; Lindner's many editions of Venetian music were in part responsible for the introduction and popularity of Italian vocal styles in Germany. Although the exact course of study that Hassler followed in Venice is unfortunately unknown, he received tutelage from Andrea Gabrieli in composition and organ-playing. His reputation as a keyboard virtuoso seems already to have spread: in March of 1585 the young Hassler was briefly summoned to Augsburg, where he was handsomely compensated for performing as an organist at the wedding of Ursula Fugger and Kaspar von Meggau.

During his time in Venice Hassler would likely have encountered a number of leading musicians associated with S Marco, including Zarlino and Claudio Merulo. He also came to know Giovanni Gabrieli, with whom he remained in contact during subsequent years; together they composed a wedding motet in 1600 for Georg Gruber, a Nuremberg merchant then living in Venice. Following the deaths of both composers, Gruber published in their memory an anthology of 62 motets for six or more voices: the *Reliquiae sacrorum concentuum* (Nuremberg, 1615[2]; see Hedges, 1983).

Hassler appears to have left Venice for good in the latter part of 1585, likely following the death of Andrea Gabrieli. In early January of 1586, he was once again in Augsburg, this time to accept the position of *Cammerorganist* to Octavian Fugger II. During the first decade of his Augsburg service, Hassler devoted a substantial portion of his energies to the composition and preparation for the press of vocal works in a variety of genres, and a succession of important publications appeared. Yet during this period Hassler must also have remained quite active in the instrumental realm. In a 1593 portrait of the composer (by the Antwerp engraver Dominicus Custos; see illustration), the emphasis is entirely on the keyboard: Hassler is described as a 'most esteemed organist', and a single-manual chamber organ with pedal is prominently included in the frame.

In 1596 Hans Leo was among 53 celebrated organists invited by Duke Heinrich Julius of Brunswick to examine and inaugurate a new instrument of 59 stops at the Schlosskirche, Gröningen. At this occasion, later documented in detail by Andreas Werckmeister in his *Organum Gruningense redivivum* (Quedlinburg and Aschersleben, 1705/*R*), Hassler was joined by such notables as Hieronymus and Michael Praetorius, along with numerous organists representing the cities and playing styles of north Germany. Over succeeding years, Hassler continued to enjoy recognition as an expert in organ design, and he was in regular demand as an examiner of new instruments. He also undertook ventures in mechanical instrument construction: one project involved a much-exhibited clockwork organ that was eventually sold to Emperor Rudolf II. In 1597, Moritz, Landgrave of Hesse, patron of Schütz and himself a composer and generous supporter of the arts, attempted to persuade Octavian II to release Hassler for service at his court in Kassel; perhaps with an eye to obtaining such a post, Hassler had dedicated his 1596 madrigal volume to Moritz. At the time, however, Hassler had been seconded by Octavian to the household of Christoph Fugger for a period of two years.

*Hans Leo Hassler: engraving by Dominicus Custos, 1593*

Around the turn of the century Hassler's vocal compositions began to appear in important anthologies, including those published by his brother (3) Kaspar Hassler, the *Rosetum Marianum* of Klingenstein (1604[7]), and Bodenschatz's *Florilegium selectissimarum cantionum* (1603[1]), which was widely circulated and still in use by Bach at the Thomasschule, Leipzig. Though the Augsburg council had appointed Hassler director of the *Stadtpfeiffer* and of town music in general, he left the city some months after the death of Octavian Fugger (on 31 August 1600); by the latter part of 1601 he had returned to Nuremberg as director of town music (having been succeeded at Augsburg by Christian Erbach). His four years in Nuremberg were busy ones, particularly after his appointment as 'Kaiserlichen Hofdiener' in the court of Rudolf II. His duties involved him in wide-ranging business and fund-raising missions for his patron, as well as the planning for new organs in the city's churches. During the same period he held the post of organist at the Frauenkirche. In 1604, perhaps distracted by increasingly complex business and legal dealings (see Roth, 1912–13), he was granted a year's leave of absence by the town council and moved to Ulm, where he married Cordula Claus, the daughter of a respected merchant family; the union produced no surviving children. After his leave expired, he ended his association with Nuremberg and in 1607 became a citizen of Ulm, joining that city's merchants' guild in the following year. Although he held

no specific musical appointment in Ulm, he was occupied there in various commercial undertakings and with the publication of his latest compositions and new editions of earlier works.

In the late summer or early fall of 1608 Hassler made the final move of his career, to the Dresden court of the Elector Christian II of Saxony. He was initially appointed electoral chamber organist, and was also made responsible for the care of the instrument collection and management of the music library. Eventually he came to assume the duties of Kapellmeister, though he had by then developed the tuberculosis that would eventually take his life. In the months preceding his death in 1612, Hassler drew up the specification for a large new organ for the Dresden Schlosskapelle, an instrument that was subsequently constructed by the celebrated organbuilder Gottfried Fritzsche, then also in the service of the Elector. The instrument is described in the *Syntagma musicum* of Praetorius (ii, Wolfenbüttel, 1618, 2/1619/*R*, 186–8; see also Beschorner, 1905, and Gress, 1992), and played an important role in court musical activities supervised by Praetorius and Schütz; its façade is visible in the well-known engraving of Schütz and his Kapelle at Dresden, published in the 1676 *Geistreiches Gesang-Buch* (RISM, BVIII/1 1676[11]). Hassler died while in attendance with the court of Johann Georg I (who had succeeded Christian II), during the election and coronation of the Emperor Matthias at Frankfurt.

2. WORKS. Hassler's vocal compositions on Latin texts, for both single choir and polychoral groupings, are among the finest German musical works of their time, displaying great expressive subtlety as well as a pervasive concern for sheer beauty of sonority. Presumably created for the observances of the Catholic Fugger households, Hassler's nine masses blend imitative passages with both strict and animated homophony. Frequent cadences punctuate relatively compact musical sub-units, which juxtapose distinctive and pleasingly varied motifs keenly sensitive to the rhythms and content of the texts; utter clarity in text presentation is a hallmark of these works. While the sound-worlds of Palestrina and Lassus are at times evoked, Hassler establishes an atmosphere of intimacy and repose that is altogether unique to him. Three masses are parody works based on the composer's own motets, and even in the masses not apparently related to motet models, the various movements are unified by thematically related openings.

Hassler's numerous surviving Latin motets, which favour texts appropriate to either Catholic or Protestant contexts, are of consistently high quality, though quite varied in technique. Many of these works are predominantly homophonic, at times with extended chordal declamation on short note values in a manner reminiscent of Lassus. The second motet print (1601), however, includes a number of compositions that are more contrapuntally complex: intricate textures are built up of long, flowing lines, balanced by careful harmonic articulation and by the employment of distinctive declamatory motives. While most of his motets are relatively restrained in manner, Hassler was not averse to musical extremes when they were justified by the text: in his setting of *Ad Dominum, cum tribularer*, for example, he employed both ascending and descending forms of the chromatic tetrachord. Given the conventions of the time, concerted performances of the Hassler motets would not have been out of the question, and indeed instrumental participation is indicated on the title pages of some of the anthologies in which his works appeared.

Hassler's principal work for the Lutheran rite was his 1607 collection of 52 four-part *Psalmen und Christliche Gesäng*, in which familiar melodies of Lutheran hymnody were set imitatively ('fugweiss componiert', in the composer's words). This publication bears notable similarities to Melchior Franck's *Contrapuncti compositi* (Nuremberg, 1602[3]); indeed, it has been speculated that the much younger Franck may have been a student of Hassler. Hassler's volume has a somewhat retrospective cast, incorporating techniques that had been the norm a half-century earlier. In the majority of the settings motifs derived from the cantus firmus are treated imitatively in all parts. In certain settings, however, the cantus firmus is presented strictly in one or more voices (in augmentation and sometimes in canon, resulting in a fifth part), while elsewhere there are homophonic passages in dialogue. In his ten-movement setting of the chorale melody *Vater unser in Himmelreich*, Hassler demonstrated his ingenuity by employing a different technique for each verse. The compositions in this volume could certainly have been performed by instruments as well (as Franck had suggested on the title page of his publication). There was still demand for Hassler's collection as late as 1777, when it was reprinted by Breitkopf.

With the final volume published during his lifetime, the 1608 *Kirchengesäng*, Hassler added to the repertory of music for Lutheran choir and congregation that Lucas Osiander had originated in his 1586 *Fünffzig geistliche lieder und Psalmen*. The bulk of the collection consists of straightforward, entirely homophonic settings in four parts, with the cantus firmus placed always in the highest voice; also included are two works for double choir that employ textures of eight real parts.

Hassler was equally renowned for his secular vocal compositions on both Italian and German texts. These include canzonettas (likely inspired by the publications of such composers as Gastoldi, Marenzio and Orazio Vecchi), superb Italian madrigals, through-composed narrative songs, and homophonic dance-songs with strongly profiled rhythms, including ballettos with 'fa-la-la' refrains such as *Tantzen und springen* (1601). His familiarity with earlier, specifically German lied forms, is evidenced in the well-known *Nun fanget an ein guts Liedlein* of 1596. Yet Hassler was strongly influenced by Italian musical and textual conventions: though he credited himself with the German texts in his *Neüe teütsche Gesang* (1596) and *Lustgarten* (1601), these include translations of Italian poetry by Guarini and Tasso among others. The *Lustgarten* also contains three eight-voice lieder for two choirs and eleven six-voice instrumental intradas. Hassler's lieder were important models for many younger German composers, including Johann Staden and J.H. Schein. The subsequent history of Hassler's love song *Mein G'müth ist mir verwirret* (1601) offers an idea of the composer's considerable influence. The upper part of the song appeared in the *Harmoniae sacrae* (RISM, B/VIII/1 1613[06a]), adapted to the words *Herzlich thut mich verlangen* and closely mirroring the original in mood. Johannes Crüger then included the tune in the *Praxis pietatis melica* (RISM, B/VIII/1 1647[08]) to the words of Paul Gerhardt's *O Haupt voll Blut und Wunden*; Gerhardt's words and Hassler's

music were eventually incorporated by J.S. Bach into his *St Matthew Passion*. Others adapted new texts to Hassler's songs (see Snyder, 1992), while the treble part of Hassler's *All Lust und Freud* (1601), identified by the composer as a 'gagliarda', served as a model for Schütz's setting of Psalm xcvii in the third edition of the *Psalmen Davids* (1661).

Hassler's significance as a keyboard composer has been increasingly recognized, thanks in part to the inventory of the Turin keyboard tablatures in the early 1960s, which added several dozen keyboard works to his previously known output. These include toccatas, introits, ricercares and fantasias, canzonas, organ versets, and variation sets. Like several of his comparably situated contemporaries, including Erbach and Sweelinck, Hassler apparently chose not to publish his keyboard compositions, nor did any of these works appear in prints edited by others either before or after his death; moreover, no autograph source materials survive.

While in Venice, Hassler encountered a number of keyboard genres that were not yet well known or widely cultivated in German-speaking lands. During the first three-quarters of the 16th century, south German keyboard composers had to a great extent based their compositions on pre-existing materials, with particular emphasis on the employment of sacred cantus-firmus melodies. Keyboard transcription and 'coloration' (embellishment) of extant vocal models, both sacred and secular, also formed an important part of keyboard tradition in the years of Hassler's youth. The introduction into Germany of more abstract and idiomatically conceived italianate instrumental genres opened the way to the creation of keyboard compositions largely independent of vocal prototypes. In this development, an evolution crucial to the later achievements of Buxtehude and Bach, Hassler played an essential role.

While certain of Hassler's keyboard works are economical of means and apparently pedagogical in nature, others represent professional repertory of the highest calibre. Venetian influence is frequently combined with highly original features: in the lengthy *Toccata sexti toni*, for example, the challenge of integration and cohesion is imaginatively addressed through the use of the 'soft' hexachord, which is employed throughout as a unifying element in a strategy unique to the toccata repertory. Hassler's 31 variations on the *Ich ging einmal spazieren* (or *monica*) tune stand as the most extensive single composition of the 1770 keyboard works preserved in the Turin tablatures, far surpassing in sheer scale any earlier variation work. Here Hassler moved well beyond the idioms of Venice, creating a 'summa' of keyboard techniques and figurations. This piece, like several others among Hassler's keyboard compositions, at times makes use of distinctive textures also identifiable in keyboard works by Sweelinck, Byrd, Bull and other northern contemporaries. Such striking correspondences likely reflect exchanges of material and ideas between south German and northern European musical centres at a date somewhat earlier than long supposed.

Hassler was an unusual phenomenon in the Protestant musical realm of the late Renaissance: a learned and cosmopolitan figure, at home in worldly affairs and fluent in several languages, who successfully cultivated a variety of genres and techniques. While his originality is invariably evident, he stood also as a resourceful intermediary who synthesized elements of Italian, south German and northern idioms in especially artful fashion. Following his death, his native city of Nuremberg characterized him as 'Musicus inter Germanos sua aetate summus', an epitaph he richly deserves.

DOUBTFUL AND MISATTRIBUTED WORKS

Canzon (attrib. C. Erbach in *I-Pu*, *Tn*; wrongly attrib. Hassler in W 95), ed. in CEKM, xxxvi/3, 120; Canzon quinti toni (attrib. C. Erbach in *D-Bsb*, *Mbs*, *I-Tn*; anon. in *Pu*; wrongly attrib. Hassler in W 94), ed. in CEKM, xxxvi/3, 100, 104; Can: di Johanne Leone Haslero, 4vv, *D-Mbs* (attrib. C. Erbach in *I-Pu*, *Tn*; anon. in *PL-PE*), ed. in CEKM, xxxvi/5, 161; Canzon primo tuono Io: Leo Hasl (o del S. Claudio da Coreggio), 4vv, *I-Pu* (=A. Gabrieli, *Ricercar arioso*, 1605[19]; attrib. A. Gabrieli in *D-Bsb*, *I-Tn*), ed. P. Pidoux, *Andrea Gabrieli: Canzoni alla francese et ricercari ariosi* (Kassel, 1961); Canzon J.L.H., 4vv, *Tn* (attrib. C. Merulo in 1617[24]; anon. in *D-Bsb*, *I-VEcap*); Canzon J.L.H., 4vv, *Tn* (attrib. C. Merulo in *Tn*, *VEcap*, 1608[24]; attrib. V. Bellavere in 1599[19]; anon. in *PL-PE*), ed. in AMP, viii (1970)

Sonata p[a] parte. J.L.H., *I-Tn* (variations on 'Fortune' tune, correctly attrib. J.P. Sweelinck in *D-Bs*), ed. in *Jan Pieterszoon Sweelinck: Opera Omnia*, I/iii 7; Toc: 2di: Ton: Eius: Aut: [Leon: Has:], *D-Bsb* (see Panetta, 1991); Toc: 4Ti: Ton: Au: Leon: Has, *Bsb* (correctly attrib. Sweelinck in *B-Lu*, *D-Bsb* Lynar A1, *GB-Cfm*, *I-Pu*, *Tn*; anon. in *D-Lr*; see Panetta, 1992), ed. in *Jan Pieterszoon Sweelinck: Opera Omnia*, I/i 94; Toccata del Sig[r]. Hasler, *I-Tn*, Giordano I, S 55 (correctly attrib. Sweelinck in *D-Bs*, anon. in *I-Tn*, Giordano II; see Panetta, 1992), ed. in *Jan Pieterszoon Sweelinck: Opera Omnia*, I/i 149; Toccata del Sig[r]. Hasler, *I-Tn*, S 60 (correctly attrib. Sweelinck in *A-Wm*; see Panetta, 1992), ed. in *Jan Pieterszoon Sweelinck: Opera Omnia*, I/i 147

**(3) Kaspar Hassler** (*b* Nuremberg, bap. 17 Aug 1562; *d* Nuremberg, bur. 21 Aug 1618). Organist and editor, son of (1) Isaak Hassler. In 1586 he was appointed organist of the Egidienkirche, Nuremberg, in succession to Hans Haiden, who later became his father-in-law. The precentor there at that time was the notable Friedrich Lindner. The following August he took up a similar post at the larger church of St Lorenz. He remained there until 1616 when he became organist of St Sebaldus, the most prestigious organ appointment in Nuremberg.

Although Kaspar worked in Nuremberg for the whole of his life, he gained a wide reputation as an organist, and was particularly highly regarded by the Fugger family in Augsburg. He passed considerable periods of time there in 1587–8 and in the years 1614 and 1616, though in so doing he brought himself into disfavour with Nuremberg council. His close association with the Fuggers was probably motivated to some extent by his business acumen. In 1595, together with his brothers, he was ennobled by Emperor Rudolf II, and in 1604 was granted the privilege of armorial bearings as a reward for his commercial transactions. Through his brother (4) Jakob Hassler, he also maintained business and music connections with the Hohenzollern establishment in Hechingen.

In 1596, with (2) Hans Leo Hassler, he was among the organists invited by the Duke of Brunswick to judge the recently completed organ in the Schlosskirche at Gröningen. Like Hans Leo, Kaspar was a noted authority on organ design: in 1607 he was consulted in connection with the new organ in the Egidienkirche, Nuremberg, and in 1617 with the cathedral organ in Würzburg. In the same year he supervised the restoration of the organ at St Sebaldus, Nuremberg.

Of Kaspar's compositions, only a four-part *Fantasia* in German organ tablature is known (*D-Bgk*; ed. in DTB, vii, Jg.iv/2, 1903). Nevertheless, he is important for the several collections that he edited (RISM 1598[2], 1600[1], 1600[2], 1613[1]). Preference in these books is given to Italian masters, chiefly the two Gabrielis, Marenzio, Merulo and Orazio Vecchi, and also to a handful of German composers (notably Aichinger and (2) Hans Leo Hassler). Kaspar did much to foster in Germany a knowledge and love of Venetian polychoral music. He undoubtedly took as his model Friedrich Lindner, who had edited a series of earlier anthologies. With Lindner, Kaspar Hassler was a member of the Nürnberger Musikalischen Kränzleingesang, an academy in the humanist Italian tradition with a particular interest in music.

**(4) Jakob Hassler** (*b* Nuremberg, bap. 18 Dec 1569; *d* ?Eger, between April and Sept 1622). Musician and composer, son of (1) Isaak Hassler. He received his earliest musical training from his father, and in 1585 he was apprenticed a *Stadtpfeiffer* in Augsburg. He was granted a stipend in 1590 to enable him to study further in Italy, presumably in Venice. Upon his return he became chamber organist to Christopher Fugger. Together with his brothers he was ennobled by Emperor Rudolf II in 1595.

Beginning in 1595, Jakob was involved in a paternity suit, with the result that both he and his future wife, Leonore Ostermaier, were taken into custody (see Schmid, 1941); through the mediation of his brother (2) Hans Leo Hassler, he won an early release. In 1596 he obtained a new post, that of court organist to Count Eitelfriedrich IV von Hohenzollern in Hechingen; an earlier request on his behalf by Octavian II Fugger to Moritz, Landgrave of Hesse, had been unsuccessful.

Faced with yet another paternity suit Jakob left Hechingen in 1601 and subsequently applied for the directorship of the Augsburg *Stadtpfeiffer* in succession to his brother (2) Hans Leo Hassler. His earlier difficulties stood against him, however, and he failed to obtain the post. Eventually he found permanent employment as imperial court organist in Prague. After the death of the Emperor Rudolf II in 1612 his duties in Prague lightened considerably, and he eventually settled in Eger where he was involved in mining enterprises. He probably died there, having unsuccessfully tried again to gain a post in Augsburg after the outbreak of the Thirty Years War.

Jakob published numerous vocal works, yet these are unexceptional and in no way comparable to those of his brother (2) Hans Leo Hassler. While his highly prestigious organist appointments offer ample testimony to the esteem accorded his talents by contemporaries, only a handful of compositions bearing attributions to him have survived in keyboard sources; several of these appear to be transcriptions of works originally composed for instrumental ensemble. Although Jakob's *Toccata di Quarto tono* displays affinities with Venetian prototypes, it is unique for the period in its employment of a two-part free-imitative design.

WORKS

Madrigali, 6vv (Nuremberg, 1600)

Magnificat 8 tonorum, 4vv, cum missa, 6vv, et psalmo li, 8vv (Nuremberg, 1601)

Vocal works in 1604[7], 1613[10], 1615[2], *D-Bsb*, *Mbs*, *PL-WRu*

Keyboard works in 1607[29], 1617[24], *I-Pu*, *Tn*; all ed. H. Krones, *J. Hassler: Orgelwerke* (Vienna, 1978)

WALTER BLANKENBURG/VINCENT J. PANETTA

**Hässler, Johann Wilhelm** (*b* Erfurt, 29 March 1747; *d* Moscow, 29 March 1822). German organist, pianist and composer. He first studied composition and the keyboard with his uncle, the organist J.C. Kittel. About 1762 he was appointed organist of the Barfüsserkirche at Erfurt. During the 1770s he wrote his first keyboard works and performed in several German cities, including Hamburg, where he met C.P.E. Bach. In 1779 he married the singer Sophie Kiel, with whom he gave a series of winter concerts from 1780. During the 1780s Hässler travelled widely as a performer, to Weimar, Berlin, Potsdam and elsewhere, and in 1784 he founded a music shop. He wrote his autobiography to 1786, which he published with the 1787 set of his *Sechs leichte Sonaten*. In 1789 at Dresden he met Mozart, who wrote (letter of 16 April 1789):

Hässler's chief excellence on the organ consists in his foot-work, which ... is not so very wonderful. Moreover, he has done no more than commit to memory the harmony and modulations of old Sebastian Bach and is incapable of executing a fugue properly. ... Thus he is far from being an Albrechtsberger.

In 1790–92 Hässler was successful as a pianist and teacher in London, and in 1792 he went to Riga and then to St Petersburg, leaving his family at Erfurt. In 1793 he was appointed pianist to Grand Duke Alexander, for whose wedding to Princess Elizabeth he composed a cantata, one of the first items published by Gerstenberg & Dittmar (1793). In 1794 Hässler moved to Moscow, where he enjoyed considerable popularity and spent the rest of his life as a pianist and teacher. He was active as a music publisher in both St Petersburg and Moscow.

Hässler's output was almost entirely for the keyboard. Besides a vast number of sonatas he composed many pieces in freer forms, such as capriccios and fantasias, which show the influence of C.P.E. Bach. The *Grande gigue* op.31 was a popular bravura piece for the concert hall during the early 19th century. Hässler taught such composers as Genishta and probably A.A. Alyabyev, and in many respects provides a link between the foreign composers who dominated Russia during the 18th century and the younger generation of Russian-born composers active towards the end of the century.

WORKS

*first published in Moscow, n.d., unless otherwise stated*

KEYBOARD

*sonatas, hpd/pf 2 hands, unless otherwise stated*

† – *arrangement from 6 leichte Sonaten (5 sets, 1780–90)*
‡ – *arrangement from Clavier- und Singstücke, i–ii (1782–6)*

6 (Leipzig, 1776), 1 also pubd as op.1; 6 neue Sonaten ... nebst einem Anhang von einigen Liedern und Handstücken (Leipzig, 1779); 6 leichte Sonaten (Erfurt, 1780); Clavier- und Singstücke, i (Erfurt, 1782), collab. S. Hässler, ii (Leipzig, 1786), collab. J.T. Cramer; 6 Klavier-Solos halb leicht halb schwer (Leipzig, 1785); 6 [24] leichte Sonaten, i–iv (Erfurt, 1786–90), incl. 1 for 3 hands, 1 for 4 hands, 7 for chamber insts; 48 kleine Orgelstücke (Leipzig, 1789)
Fantaisie et sonate, op.1; Caprice et sonate, op.2; Fantaisie et sonate, op.3 (Moscow and St Petersburg, 1795); Fantaisie et sonate, op.4 (Moscow and St Petersburg, 1795); Caprice et sonate, op.5 (Moscow and St Petersburg, 1796); Prélude et sonate, op.6; Ariette avec XXX variations, op.7; 3 parties, op.8‡; Chanson russe variée, op.9; Prélude et ariette variée, op.10; 3 préludes et 3 ariettes variées, op.11†‡; Grande sonate, 3 hands, op.12 (Moscow, 1786)†; 3 as op.13 (Moscow and Leipzig, n.d.)†; 3 as op.14 (Moscow and Leipzig, n.d.)‡; 3 sonates expressives, op.16 (Moscow and Leipzig, 1803); Fantaisie et sonate, op.17 (Moscow and Leipzig, 1803); Préamble et divertissement, op.18; Fantaisie et chanson russe variée, op.19; Sonatine, 2 hpd/pf, op.20; 2 as op.21†; 3 as op.23†; Grande sonate, op.26; 5 pièces caractéristiques, op.27; 1 for 4 hands, op.28; Etude en 24 valces, op.29; Prélude et chanson allemande variées, op.30; Grande gigue, op.31
3 sonates expressives, op.32 (St Petersburg, n.d.)†; 2 grandes sonates, op.33 (St Petersburg, n.d.)‡; Caprice, divertissement, romance et presto, op.34 (St Petersburg, n.d.); 2 nouvelles fantaisies et 2 sonates anciennes, op.35 (St Petersburg, n.d.); Fantaisie et sonatine, 4 hands, op.36; 3 parties, op.37; 50 pièces à l'usage des commençans, op.38; 3 as op.39, incl. 1 for chamber insts.; 6 sonatines faciles et agréables, op.40, lost; Symphonie brillante et 2 sonates instructives, op.41†‡; 6 sonatines, op.42; 3 as op.43†; 2 as op.44‡; 6 as op.45; 32 pièces progressives et doigtées, op.46‡ [also arr. partly from 6 neue Sonaten (1779)]; 360 préludes ... dans tous les tons majeurs et mineurs, op.47 (1817); 3 as op.48; Etude en 24 valces, op.49; others, mostly lost

OTHER WORKS

Orch: Grand concert, pf, op.50
Chbr: pieces in 6 [24] leichte Sonaten (Erfurt, 1786–90); 6 Lessons, kbd, vn/fl, vc (London, n.d.); 3 sonates, kbd, vn, vc, op.15 (1802); Caprice et chanson russe variée, kbd, vn, vc, op.22; 4 sonatines, pf, vn/fl, vc, op.24; Sonate, trio, sonatine, pf, vn/fl, vc, op.25; 1 sonate in op.39; others
Vocal: pieces in 6 neue Sonaten (Leipzig, 1779) and Clavier- und Singstücke, i–ii; 6 songs, kbd acc. (London, n.d.); cant. (St Petersburg, 1793); others, incl. arias and motets, mostly lost

GEOFFREY NORRIS/KLAUS-PETER KOCH

**Hassler, Simon** (*b* Germany, 25 July 1832; *d* Philadelphia, 24 Jan 1901). American conductor and composer of German birth. He went to Philadelphia in 1842 with his father, Henry Hassler, who conducted at the Arch Street Theatre (1844), the Chestnut Street Theatre (1845) and the Walnut Street Theatre (1846–55). Simon directed orchestras at the Walnut Street Theatre (1865–72), the Chestnut Street Theatre (1872–82) and the Chestnut Street Opera House (1882–99). He composed popular marches, galops and quadrilles, music for many of Shakespeare's plays and a Festival March, which was performed at the opening of the Permanent Exhibition at Philadelphia in 1876. In 1854 he became a member of the Musical Fund Society, and in 1891 he conducted the concert celebrating the society's remodelled concert hall. Sousa played under Hassler at the Chestnut Street Theatre during the late 1870s and produced some of his first transcriptions for its orchestra.

Hassler's brother, Mark Hassler (*b* Germany, 1834; *d* Philadelphia, 30 Nov 1906), directed music at society balls in Philadelphia, Baltimore and Washington, was reputedly the first to introduce Johann Strauss's waltzes into dances in America and was music director at the Arch Street Theatre. Simon's sister, Rosalie Hassler Rau, was an accomplished pianist.

T.E. WARNER

**Hastings, Thomas** (*b* Washington, Litchfield Co., CT, 15 Oct 1784; *d* New York, 15 May 1872). American composer, tune book compiler, hymn writer and writer on music. His early musical education came largely from independent study and family encouragement. In 1797 the family moved from New England to Clinton, New York, where Thomas led a village choir and began teaching singing schools. He became active in an Oneida County musical society (later named the Handel and Burney Society), formed around 1814. In 1815 he began his career as a tune book compiler. He taught singing schools in Utica and the surrounding area, and from 1819 to 1823 in the area of Troy and Albany.

In 1823 Hastings settled in Utica, where he edited the *Western Recorder*, a religious weekly. His regular column on church music helped to establish his reputation, and he made occasional trips from Utica to lecture and advise religious groups on the subject. In 1832 he moved to New York City, where he organized a programme of collective music instruction for the choirs and congregations of more than a dozen churches. He remained in New York until the end of his life as a teacher and choirmaster, a compiler of sacred tune books and other publications, a participant in musical and religious associations, and a leader in musical 'conventions' and 'normal institutes' for the training of music teachers.

Hastings is estimated to have composed some 1000 sacred pieces and written about 600 hymn texts. His tunes 'Toplady', 'Ortonville', 'Retreat' and 'Zion' are still found in American hymnals. He assisted in the compiling of about 35 collections of music, produced several books and articles on music, and founded and edited a monthly periodical, the *Musical Magazine* (1835–7).

Hastings exemplified the concern for 'taste' that dominated the ideology of American sacred music from the second decade of the 19th century. He believed that the chordal texture and orthodox thoroughbass harmonies of contemporary Anglo-European hymnody – the idiom in which he cast his own compositions and arrangements – were founded upon established principles of musical 'science'. In his view the 'state of infancy' of music in America meant that an elaborate musical style could not effectively express religious emotions to most American worshippers. In an 1837 letter, he claimed particular virtue for the cautious, straightforward hymn tune style that he and Lowell Mason had helped to establish, noting that 'Europe has no style strictly devotional that compares at all with what we are cultivating in this country'.

Hastings's first and perhaps foremost tune book, *Musica sacra* (1815, 2/1816), 'compiled at the request, and published under the patronage of the Oneida County Musical Society', was combined with Solomon Warriner's *The Springfield Collection* (1813), and as *Musica sacra, or Springfield and Utica Collections United* went through ten editions and many reprints over two decades (1818–38). Other tune books were published under the sponsorship of the New York Academy of Sacred Music (*The Manhattan Collection*, 1836, *The Sacred Lyre*, 1840); the American Tract Society (*Sacred Songs for Family and Social Worship*, 1842, rev. and enlarged 2/1855, *Songs of Zion*, 1851); the Methodist Episcopal Church (*Indian Melodies*, 1845, a book of tunes by Thomas Commuck, harmonized by Hastings); and the Presbyterian Church's Board of Publications (*The Presbyterian Psalmodist*, 1852, *The Presbyterian Juvenile Psalmodist*, 1856). Hastings also collaborated with other musicians, including L. Mason, W.B. Bradbury, I. Woodbury, G.F. Root and P. Phillips. His *Dissertation on Musical Taste* (1822, 2/1853), the first full-length musical treatise by a native American, is an important landmark.

RICHARD CRAWFORD/DAVID W. MUSIC

**Hasz** [Hase, Hass, Haass], **Georg** (*b* ?Nuremberg, *c*1560; *d* ?Nuremberg, before 1623). German amateur composer. In the 16th century Hasz was a common name in Nuremberg: a Georg Hasz was baptized in each of the years 1557, 1560 and 1562, and one of them may be the composer. Hasz was one of 12 citizens of Nuremberg who in 1588 founded a society 'for the advancement and practice of the honourable art of music'; it met fortnightly on Sunday afternoons to perform both vocal and instrumental music. The members of the society engaged professional musicians, including Friedrich Lindner, Kaspar Hassler and Martin Paumann, and paid them an

annual fee. The rule book (in *GB-Lbl*) records that Hasz, who was clerk to the society, was a qualified musician and sometimes put his instruments at the society's disposal. The society met regularly until 1602, but then not until 1623, when it was re-established. Hasz's name is not found in the new register: he had probably died in the meantime. In 1603 he visited Breslau with a commendatory letter from the Nuremberg senate and in 1608 took part in a commission to decide whether the organs of St Sebaldus and St Lorenz, Nuremberg, should be tuned alike. It is possible that he was the 'honourable citizen' who according to a document in *D-Nla* was buried on 14 May 1609 'behind the Town Hall'.

In 1602 Hasz published in Nuremberg *Neue fröliche und liebliche Täntz mit schönen poetischen und andern Texten*. In the preface he said that he was not and never wished to be considered a professional musician or composer: he was a tradesman who since his youth had been greatly drawn to music and who composed for recreation. His collection consists of 27 four-part songs for voices and instruments. They are in a simple note-against-note style, with lively dance rhythms and regular phrases. Hasz also wrote the poems, 22 of which are acrostics; most treat of mythological figures, and some re-use ideas from earlier German songs. A second edition (RISM 1610[21]) also includes 12 ballettos by 'D.H.N.' (probably David Haiden Norimbergensis; *see* HAIDEN, (4)) and a dialogue for eight voices by Christoph Buel. That the second edition includes such additions suggests that it appeared posthumously and lends weight to the suggestion that Hasz was the 'honourable citizen' who was buried in 1609.

LINI HÜBSCH-PFLEGER

**Hataš** [Hatasch, Hattasch, Hatass]. Czech family of musicians. The relationship between some of its members is uncertain.

(1) **Dismas (Thaddeus) Hataš** (*b* Vysoké Mýto, Bohemia, 1 Dec 1724; *d* Gotha, 13 Oct 1777). Violinist and composer. He settled in Gotha, where in May 1751 he married Anna Franziska Benda (see §(2) below). On 31 October 1751 he was appointed *Kammermusicus* in the orchestra of the Duke of Saxe-Gotha, and gradually advanced to Konzertmeister. He was also known as a violin teacher. His symphonies and violin sonatas are three-movement cycles in the early Classical idiom.

WORKS

Inst: 2 syms., D, *CZ-Bu* (microfilm); Sym., E, listed in Breitkopf catalogue, suppl.i (1766); Conc., G, fl, orch, *D-Rtt*; 2 sonatas, *SWl*; 6 sonatas, vn, bc, listed in Breitkopf catalogue (1762)

Vocal: Noch kannt ich nicht der Liebe Macht, song, in *Göttinger Musenamanach* (1770) and Sammlung verschiedener Lieder von guten Dichtern und Tonkünstlern, i (Nuremberg, 1780)

(2) **Anna Franziska** [Frantziska, Františka] **Hatašová** [née Benda] (*b* Staré Benátky, bap. 26 May 1728; *d* Gotha, 15 Dec 1781). Soprano, sister of Franz and Georg Benda, and wife of (1) Dismas Hataš. With her parents she left Bohemia in 1742 for Potsdam, where she studied singing with her eldest brother Franz. On the recommendation of her brother Georg she was appointed *Kammersängerin* of the Duke of Saxe-Gotha in December 1750, a position that she held until her retirement in 1778. In May 1751 she married (1) Dismas Hataš. Her appearance at Gotha in G. Benda's *Xindo riconosciuto* (1765) seems to have been exceptional; she normally performed at concerts and in the church rather than in opera. She was appreciated for her musicianship and superb coloratura technique as well as for the quality of her voice. G. Benda composed his *Collezione di arie italiane* for her. She also taught singing.

(3) **Heinrich Christoph Hataš** (*b* Gotha, 1756). Violinist and composer, active in Germany, son of (1) Dismas Hataš and (2) Anna Františka Hatašová. From January 1778 he was a first violinist in the orchestra of Friedrich Ludwig Schröder's theatrical troupe at Hamburg. It has not been established that he was 'Hattasch junior', music director of the Brunian troupe at Schleswig and Flensburg. He wrote three Singspiels: *Der Barbier von Bagdad* (lost), *Der ehrliche Schweizer* (lost) and *Helva und Zelinde* (or *Helva und Zelime*), of which excerpts are extant in vocal score (Hamburg, 1796).

Some other members of the family were also musicians. An Ondřej Hataš was cantor and organist at Luže, near Vysoké Mýto, about 1719. Ivan Václav [Wenzel] Hataš (*b* Vysoké Mýto, 3 Sept 1727), a brother of (1) Dismas Hataš, may possibly have been the Jan Hataš who was cantor at Rožmitál (1742–52). Another Jan Hataš (*b* *c*1751; *d* Mníšek pod Brdy, 15 Nov 1784) was cantor at Mníšek from about 1770. Kouba listed for Hataš a number of masses, motets, offertories and other sacred works (mostly in the Národní Museum, Prague, and in the Moravian Museum, Brno), which because of the absence or ambiguity of the forename cannot be precisely assigned among the various family members; the same is true of a set of woodwind parthias by Jan Hataš in the Národní Museum. Further confusion may also arise with the works of Jan Heteš [Hetesch; Hettisch, Johann] (*b* Liblín, nr Plzeň, 7 May 1748; *d* Lwów, 1793), a Czech composer and virtuoso cellist.

MILAN POŠTOLKA

**Hatašová, Anna Franziska.** *See* HATAŠ, (2).

**Hatch, Tony** (*b* Pinner, 30 June 1939). English composer, bandleader and record producer. While writing arrangements for the band of the Coldstream Guards during his

national service he composed the teenbeat ballad *Look for a Star*, recorded by Garry Mills in 1960. He became one of the busiest journeymen in British pop music during the 1960s showing a chameleon-like ability to adapt to the changing fashions. As recording manager for Pye Records throughout the decade, Hatch wrote and produced a beat group hit for The Searchers (*Sugar and Spice*), the dramatic ballad *Joanna* for Scott Walker, and a sequence of bright ballads for Petula Clark. Co-written with his wife, the singer Jackie Trent, these included *Downtown*, *Don't sleep in the subway* and *I know a place*. Trent's own recordings of Hatch-Trent songs included the more conventional ballad *Where are you now (my love)*.

Hatch was also a highly successful composer of television theme tunes. He wrote the themes for the soap operas *Crossroads*, *Emmerdale Farm* and *Neighbours* among others, and also co-wrote comic numbers with the comedian Benny Hill. Hatch and Trent performed in cabaret together and created a musical play from the Arnold Bennett novel *The Card* which was first performed in Bristol in 1973, transferring to London later that year; revised in 1992, the show was revived for London in 1994. See also T. Hatch, *So you want to be in show business* (London, 1976).

DAVE LAING

**Hatrík, Juraj** (*b* Okrucany, eastern Slovakia, 1 May 1941). Slovak composer. On leaving school he studied privately with Alexander Moyzes, who continued to be his composition teacher at the Bratislava Academy of Music and Dramatic Art (1958–63). With Ferenczy he studied theory and aesthetics. He attended Comenius University, Bratislava, as a postgraduate student of composition and psychology (1965–8), and after teaching at the conservatories in Košice and Bratislava he served as adviser to the Slovak Music Fund (1971–90). He was appointed reader at the Bratislava Academy in 1991, and in 1997 he became professor of composition there.

Hatrík is inspired by extra-musical terms of reference, especially literature and poetry, and by intensive study of the aesthetics and philosophy of music. The contrast and struggle of opposites (e.g. good and evil, fantasy and reality etc.) forms a central part of his composition, expressed often through varying degrees of simplicity or complexity. Vocal parts often emphasize the humanitarian aspect of his output. His early works have clearly defined melodies, an extended tonal language and employ traditional forms and processes. Examples of this are the *Symfonietta* (1962) and *Monumento malinconico* (1964). From the mid-1960s onwards he used new compositional techniques, often blending vocal and instrumental timbres, as in *Čakanie* ('Expectation'), *Introspekcia* and *Domov sú ruky, na ktorých smieš plakať* ('Home is the hands you may weep on'). In later works, synthesis and meditation replaced the notion of contrast. His accordion music and works for children form a particularly important part of his output.

WORKS
(*selective list*)

KATARÍNA LAKOTOVÁ

**Hattian music.** *See* ANATOLIA.

**Hatto episcopus Trecensis.** *See* ATO EPISCOPUS TRECENSIS.

**Hatton,** Sir **Christopher** (*b* Barking, Essex, 28 June 1605; *d* nr Corby, Northamptonshire, 4 July 1670). English

music patron and collector. His family's principal residence was at Kirby Hall, near Corby. His father, also Sir Christopher Hatton (*c*1570–1619), was a patron of Orlando Gibbons; Gibbons's *First Set of Madrigals and Motets* (1612) and Hume's *Poeticall Musicke* (1607) are both dedicated to him. The younger Hatton was Charles I's Comptroller of Household at Oxford during the Civil War and was created 1st Baron Hatton on 29 July 1643. He employed George Jeffreys as steward and appears to have engaged Stephen Bing and John Lilly for specific copying projects. Michael East dedicated his *Seventh Set of Bookes* (1638) to him. The Hatton music collection still survives (*GB-Och*). Much of the Venetian printed music was bought from the London bookseller Robert Martin; Jeffreys and Bing made manuscript copies, perhaps for performances at the Oxford court (1642–6).

JONATHAN P. WAINWRIGHT

**Hatton, John Liptrot** (*b* Liverpool, 12 Oct 1808; *d* Margate, 20 Sept 1886). English composer. His father and grandfather were professional violinists. At 16 he was already organist at three churches in the Liverpool area. He also gained some experience as an actor and singer. In 1832 he moved to London, and began to compose piano pieces and songs. In 1842 he was engaged to direct the chorus at Drury Lane Theatre, where his first stage piece was performed. During this season he became friendly with the singer Joseph Staudigl, who encouraged him to write an opera for Vienna (*Pasqual Bruno*, Kärntnertor, 1844). One song from this work, *Revenge*, was published in England and became very popular. In Vienna Hatton gained a reputation for his piano playing, especially of Bach's fugues; and he took advanced lessons in counterpoint from Sechter. On his return to England he published partsongs and songs under the pseudonym 'Czapek', supposing it to be Hungarian for 'hat on'. From 1848 to 1850, and again in the autumn of 1850, he visited the USA.

For most of his life, Hatton was constantly engaged in performing, both as a pianist and as a comic singer. He was the inventor, or at least one of the earliest exponents, of a kind of popular one-man show, in which he spoke, played the piano and sang to his own accompaniment. This was a novel idea in 1846: the *Musical World* commented that 'like Malaprop's Cerberus, he was three gentlemen at once'. He had an extraordinarily wide range of taste, for he was equally at home in the most severe forms of contrapuntal exercise, in the 'sacred' manner of Mendelssohn's oratorios, in the styles of the 16th and 17th centuries, or in a kind of clowning style of singing which brought the house down wherever he went. It was often uncertain whether the place allotted to him on the programme would be occupied by one of Bach's fugues or by a comic song of his own composition.

In 1850 he became conductor of the Glee and Madrigal Union. From 1853 to 1859 he was musical director at the Princess's Theatre under Charles Kean's management, and during this period he composed and arranged incidental music for a number of Shakespeare plays. His cantata *Robin Hood*, given at the Bradford Festival of 1856, was more successful than many of his longer works. The Ballad Concerts in St James's Hall were conducted by Hatton for their first nine seasons (1866–74). In October 1875 he paid the first of several visits to Stuttgart, and he published some of his later works in Germany. During his last years he lived chiefly at Margate, though for a short time he was at Aldeburgh, where he wrote his *Aldeburgh Te Deum*.

Hatton was, above all, a very English musician. His love for the older English traditions of vocal music is shown alike in the collections he edited and in the songs and partsongs he composed. *The Songs of England*, which was edited with Eaton Faning for Boosey & Co. (1873), demonstrates not only his catholic taste but also, in the accompaniments he provided for some of the older songs, his reticence and historical knowledge. In his own music Hatton often turned to the older English poets, especially Shakespeare and Herrick, for his texts; and he steadfastly resisted the growing tendency to chromaticism, building his effects on the diatonic system, with the help of dissonance, contrapuntal interest, and an occasional touch of modality.

In some of his songs the result is only a kind of flatness that is neither distinctively Victorian nor of any other style. But the *Songs by Herrick, Ben Jonson and Sedley* (1850) form a highly successful group in which the music, well matched in style to the poems, has many touches of originality. One of the set, *To Anthea*, was made famous by Santley's singing, but it is little, if at all, superior to some of the others. In one feature only are these songs curiously imprisoned by their period – the almost unvarying uniformity of their two- and four-bar phrase structure.

Hatton was equally successful in the 'ballad' idiom, in such songs as *Good-bye, Sweetheart*, where he resisted the temptation to indulge in incidental chromaticisms; or in character songs like *Simon the Cellarer*. *The Wreck of the Hesperus*, which had an enduring popularity, is a more ambitious effort: Longfellow's poem is a melodramatic horror, but Hatton managed to produce and sustain a genuinely sinister atmosphere by fairly simple means. It cannot be said that he was equally successful in the larger forms. In his incidental music, such as that for *Henry VIII*, he provided an overture, entr'actes and dances, and one or two songs; the music is often attractive and nearly always appropriate, but it does not add up to an integral work of art.

WORKS

*printed works published in London*

Ops: The Queen of the Thames, or The Anglers [Uncle Grayling] (operetta, 1, E. Fitzball), London, Drury Lane, 25 Feb 1842, vs (1842); Pasqual Bruno (Fitzball, after A. Dumas), Vienna, Kärntnertor, 2 March 1844, 1 song (London, 1844); Rose, or Love's Ransom (3, H.S. Edwards), London, CG, 26 Nov 1864, vs (1865)

NICHOLAS TEMPERLEY

**Hattori, Kōzō** (*b* Kagoshima, 10 March 1924). Japanese musicologist. He studied law at Tokyo University, and after graduating in 1949 studied aesthetics for three years. He studied music with Yosio Nomura and Yoshio Hasegawa, and, from 1959 to 1961, with Gurlitt in Germany. He taught history of western music at Tokyo Geijutsu Daigaku (Tokyo National University of Fine Arts and Music) from 1952 to 1989. He became professor in 1970 and was dean of the musicology division (1986–9). His special field is the German Baroque, particularly Schütz, but his chief contribution to Japanese musicology is his translations of the works of European and American scholars (Apel, Grout and Leichtentritt). The Festschrift *Ongaku to ongakugaku: Hattori Kōzō sensei kanreki kinen ronbunshū* [Music and musicology: articles to celebrate the 61st birthday of Professor Kōzō Hattori], ed. I. Sumikura and others (Tokyo, 1986) contains his biography and a complete list of his writings.

WRITINGS

MASAKATA KANAZAWA

**Hatze, Josip** (*b* Split, 21 March 1879; *d* Split, 30 Jan 1959). Croatian composer. He graduated in 1902 from the Liceo Musicale in Pesaro after studying composition with Mascagni, then became a music teacher and choral conductor in Split. Together with his contemporaries Bersa and Pejačević, he was one of the founders of a modern Croatian musical style; he brought fresh nuances and international experience to the Romantic tradition in Croatia, which at the turn of the century was rather conservative. The Mediterranean tradition in which he grew up and was educated gave a characteristic flavour to his compositions, which are mostly vocal with a rich, highly personal melodic style of the bel canto type; this is particularly true of the solo songs and cantatas. For the musical stage he left two important works: *Povratak* ('The Return'), a musical drama in the style of the Italian *verismo*, and *Adel i Mara*, which draws on stylized folk elements. The first performance of *The Return* in 1911, the year in which Bersa's opera *Oganj* was also first performed, marked an important point in Croatian operatic history.

WORKS
(*selective list*)

Stage: Povratak [The Return] (musical drama, 1, S. Tucić), 1910, Zagreb, 21 March 1911; Adel i Mara (lyric folk op, B. Radica after N. Bartulović and L. Botić), 1931–2, Ljubljana, 30 Nov 1932; Žetveni vijenac [The Harvest Wreath] (ballet), 1944, unperf.
Choral: Noć na Uni [Night on Una] (cant., H. Badalić), 1902; Exodus (cant., V. Nazor), 1912; Golemi Pan [The Great Pan] (cant., Nazor), 1917; Resurrexit (cant., R. Katalinić-Jeretov), 1920; other choral works
*c*55 songs, folksong arrs.

**Haubenstock-Ramati, Roman** (*b* Kraków, 27 Feb 1919; *d* Vienna, 3 March 1994). Austrian composer of Polish origin. He studied at the Kraków Conservatory under Malawski (1934–8), and at the Lwów Conservatory under Koffler (1939–41); he also studied philosophy and musicology at the universities of Kraków and Lwów. From 1947 to 1950 he was director of the music department of Kraków Radio and secretary of the Polish section of ISCM. He was also editor of *Ruch muzyczny* and a leading Polish music critic. In 1950 he emigrated to Tel-Aviv where he undertook the development and directorship of the central music library, and worked as a teacher at the Academy of Music. In 1957 he returned to Europe. After spending time in Paris where he became familiar with *musique concrète* he went on to Vienna where he directed the reading of modern scores for Universal Edition (1957–68). In 1959 he organized the first exhibition of graphic scores in Donaueschingen. He taught periodically at the Academy of Music in Tel-Aviv and at Darmstadt (1964–5), and directed the Gaudeamus Foundation Week at Bilthoven in 1967. He was guest-lecturer in Buenos Aires in 1968, at the Swedish Royal Academy of Music in 1969 and a fellow of the German Academic Exchange Service in Berlin (1970–71). In 1973 he was appointed professor of composition at the Vienna Musikhochschule, a position he held until 1989. As one of the few descendants of the Second Viennese School to return to Austria after World War II, he continued the Schoenberg tradition in his teaching.

Works such as *Blessings* and *Recitativo ed Aria* mark the beginning of a compositional trend in Haubenstock-Ramati's works that was to embrace increasingly difficult formal problems towards the end of the 1950s. In the series of works described by the composer as *Mobiles* (*Interpolation*, 1957; *Liaisons*, 1958; *Petit musique de nuit*, 1958; *Mobile für Shakespeare*, 1958) he created variable forms in which components can be joined together at will and can be varied, repeated or combined with other components within a many-stranded texture. *Credentials*, a complex piece in which a Beckett text is unfolded as a structure of sounds and noises, rather than as a semantic structure, conforms to this principle of outwardly compact but inwardly dynamic form. The refined sonorities that play such an important role in these *Mobiles* led Haubenstock-Ramati to develop a system of graphic notation that he used in numerous subsequent chamber works (*Jeux*, *Catch*, *Multiple*, *Frame*, String Quartet no.1). The confrontation and combination of mobile and stable forms dominate compositions of the 1960s, such as the orchestral pieces *Vermutungen über ein dunkles Haus*, *Tableau I*, and especially the Kafka opera *Amerika*. In the opera, the idea of multi-dimensionality, understood both as the multiplying of musical shapes and the fanning-out of sounds in space, plays a dominant role. Received with incomprehension at its Berlin première in 1966, the opera was rehabilitated in 1992 with a performance at the Styrian Autumn festival in Graz. A new computer programme enabled the later production to achieve a more precise realization of the work's spatial structures than had been possible earlier.

For a page from *Tableau II*, *see* ALEATORY, fig.3.

MONIKA LICHTENFELD/REINHARD KAGER

**Haubiel** [Pratt], **Charles (Trowbridge)** (*b* Delta, OH, 30 Jan 1892; *d* Los Angeles, 26 Aug 1978). American composer and pianist. He made his recital début at the age of 14 at the New York College of Music. From 1909 to 1913 he studied in Europe with Rudolf Ganz (piano) and Alexander von Fielitz (theory); he returned to the USA in 1913 to tour with the Czech violinist Jaroslav Kocian. After teaching in Oklahoma City at Kingfisher College and the Musical Arts Institute (1913–17), he served in France during World War I, and returned to New York in 1919 to study with Rosario Scalero (composition) and Modest Altschuler (orchestration). From 1920 to 1930 he taught piano at the Institute of Musical Art, continuing his own piano studies with Josef and Rosina Lhévinne (1928–31), and from 1923 to 1947 taught composition and theory at New York University. In 1935 he founded the Composer's Press, serving as president until 1966 when the firm was taken over by Southern Music. He moved to California in the 1960s.

Haubiel won first prize in the Schubert Centennial Contest in 1928 with his symphonic variations *Karma*; other of his numerous awards are the Swift Symphonic Award (for *Portraits*, 1935), the New York Philharmonic Symphony Contest award (for the Passacaglia from *Solari*, 1938) and the Harvey Gaul Prize (for Five Etudes for Two Harps, 1953). A prolific composer, Haubiel was an avowed classicist and a skilful contrapuntist; his music is characterized by a synthesis of Romantic, Classical and Impressionistic elements, combining a diatonic vocabulary with flowing and graceful melodic lines and colouristic 20th-century harmonies. Some 20 of his works have been recorded.

WORKS

Stage: Brigands Preferred (comic op, M. Leonard), 1929–46; Passionate Pilgrim (incid music, M.C. Munn), *c*1937; The Witch's Curse (fairy tale op), 1940; The Birthday Cake (operetta, H. Flexner), *c*1942; Sunday Costs 5 Pesos (Mexican folk op, J. Niggli), 1947, rev. as Berta, 1954; The Enchanted Princess, *c*1955; Adventure on Sunbonnet Hill (children's operetta, K.H. Bratton), *c*1971

Orch: Mars Ascending, 1923; Karma, sym. variations, 1928, rev. as Of Human Destiny, 1968; Vox cathedralis, 1934; Portraits (3 ritratti caratteristici), 1935; Solari, 1935–6; Suite passacaille, 1936; Sym. in Variation Form, 1937; Miniatures, str, 1938–9; Passacaglia Triptych, 1939–40; 1865 A.D., 1945; Pioneers: a Sym. Saga of Ohio, 1946, rev. 1956; American Rhapsody, 1948; A Kennedy Memorial, 1965; Heroic Elegy, 1970; several other orch works, many orch transcrs. of chbr or inst pieces

Chbr ens, 3 or more insts: Duoforms, pf trio, 1929–13; Lodando la danza, ob, vn, vc, pf, 1932; Romanza, pf trio, 1932; Pf Trio, 1932; Gay Dances, pf trio, 1932; Echi classici, str qt, 1936; In the French Manner, fl, vc, pf, 1942; Trio, fl, vc, pf, 1942; Str Trio, 1943; Trio, cl, vc, pf, 1969; numerous other works for a variety of inst ens, incl. 5 pf trios, 5 trbn qts

1–2 insts: Cryptics, bn, pf, 1932; En saga, vn, pf, 1938; Gothic Variations, vc, pf, 1943; Portraits, pf, *c*1944; Sonata, vc, 1944; Ariel, pf, c1945; Nuances, fl, pf, 1947; Shadows, vn/vc, pf, 1947; Sonata, vc, pf, 1951; 5 Etudes, 2 hp, 1953; Epochs, vn, pf, 1954; Toccata, pf, 1956; American Rhapsody, pf, *c*1964; Cryptics, vc, pf, 1973; Capriccio diabolico, pf; many others, incl. 8 vn, pf works, c30 pf works, children's pf pieces, works for 2 pf, solo org, hp, vn, fl

Vocal: 3 cants, incl. Father Abraham (E.N. Hatch), solo vv, SATB, nar, orch, *c*1945; Portals (sym. song cycle, M. Mason), high v, orch, 1963; Threnody for Love (F. Blankner), A, fl, cl, vn, vc, pf, 1965; works for chorus, orch; 1 motet; *c*10 choral partsongs; 1 choral song cycle; *c*25 songs

MSS in *US-Wc*, *CAh*, University of Wyoming, Laramie

KATHERINE K. PRESTON/MICHAEL MECKNA

**Hauck, Justus** (*d* Coburg, 1618). German printer. He was in charge of the ducal printing house in Coburg from 1596 until his death, and from 1599 he was also a city official. He printed almost nothing but the works of Benedikt Faber, Melchior Franck and Heinrich Hartmann. Particularly interesting among his extant publications is a series of volumes, including anthologies (RISM $1609^{30a}$, $1610^{19a}$, $1611^{7}$, $1611^{8}$, $1614^{18}$, $1614^{19}$, $1616^{22}$, $1617^{22}$) which probably represent a larger original output. They comprise occasional music, written principally by the three composers mentioned above, in celebration of the weddings, birthdays, funerals or the assumption of civic office of noted Coburg inhabitants.

STANLEY BOORMAN

**Haucourt** [Altacuria, de Alte curie], **Johannes** [Jehan de Hancour] (*fl c*1390–after 1416). French composer. Three French-texted chansons have survived in two sources, variously attributed to 'Harcourt', 'Arcourt' or 'Jo. Alte Curie'. Despite contrasts in the musical styles of these songs, it now seems clear that they are by the same man: certain archival documents use both the Latin and French versions of his name, and it has now emerged that he was still active as late as 1417 which might account for the stylistic diversity of his three extant works. Haucourt was a priest and he originated in the diocese of Noyen. The name appears in a document dated April 1393 listing the chaplains working for the Antipope Clement VII at Avignon; in the following year the composer was awarded a canonicate with a prebend at Seclin and a perpetual chaplaincy at Rouen Cathedral. He also held a rectorate at the parish church of St Vaast and canonicates at Rozoy (Laon, 1397), and Ste Opportune, Paris (from which he resigned in 1400) and a chaplaincy at Cambrai. He seems to have remained in the papal chapel through the 1390s, passing into the service of Benedict XIII. In a list of the singers employed by Benedict in 1403 the composer appears as 'Jo. Haucourt'.

Some time before 1401 he became a canon of the cathedral of Laon, where he was resident from at least 1407. Here he worked alongside several of his former colleagues from the papal chapel and other musicians connected with the Dukes of Berry and Burgundy, such as Jean Roger de Wattignies and Jean Caritet or Charité. In 1409 'Jehan de Haucour' was involved in a lawsuit against Wattignies over the chaplaincy to the altar of St John the Baptist at the parish church of Nouvion-le-Vineux, a post later occupied by Du Fay (see A. Planchart, 1993). It seems likely that it was Haucourt's contacts with French princely circles, in addition to his own musical and literary talents, that gained him entry to the Cour d'amour; he is listed as a secretary of this society in a manuscript that dates from *c*1417.

Of Haucourt's three extant songs, the rondeau *Se doit il plus* (*F-CH* 564, ed. in PMFC, xviii, 1981) displays several features of the so-called Ars Subtilior style of the 1380s and 90s, including syncopation, cross rhythms and changes of metre.

The rondeau is one of a handful of isorythmic rondeaux in the Chantilly Manuscript and is next to a similar work, *Je chante ung chant*, by Matheus de Sancto Johanne. Like Haucourt, Matheus originated in Noyon, worked in the papal chapel (in the 1380s) and applied for a canonicate at Laon cathedral (though apparently one was not granted). A direct connection between the two composers seems likely since Matheus's isorhythmic rondeau appears to quote material from Haucourt's virelai *Se j'estoye* (*GB-Ob* Can.misc.213 facs. (Chicago, 1995), ed. in CMM, xi/2, 1959), suggesting that the latter may date from as early as 1390. Though less complex in style than *Se doit il plus*, *Se j'estoye* contains some cross-rhythms caused by ornamental triplets in cadential passages. Haucourt's rondeau *Je demande ma bienvenue* (*GB-Ob* Can.misc.213 facs. (Chicago 1995), ed. in CMM, xi/2, 1959) is in the simpler style associated with rondeau composition in the early 1400s, featuring syllabic text-setting, a more uniform texture and short musical phrases.

YOLANDA PLUMLEY

**Haudek** [Haudeck, Houdek], **Carl** [Karel] (*b* Dobřiš, Nov 1721; *d* Dresden, 25 July 1802). Bohemian horn player and teacher. From 1738 to 1744 he studied with Johann Schindelárž [Jan Šindelář], who was principal horn player at Prince Mannsfeld's court at Prague. Haudek joined Count Kinsky's orchestra in 1744 and became Konzertmeister to Prince J.A. von Auersperg in 1746. He was appointed third horn player in the Dresden *Hofkapelle* in 1747, becoming first horn about 1756 (Marpurg), probably succeeding J.G. Knechtel. The second horn player at Dresden was ANTON JOSEPH HAMPEL, with whom Haudek worked to develop the technique of hand-stopping for playing chromatic scales.

According to Dlabacž, Haudek and Hampel performed the most difficult *Duettkonzerte* in front of the entire Dresden court. Haudek's 28 horn *Duetts* (ed. C. Larkins London, 1994), require a well-developed hand-stopping technique for both horn parts. Dlabacž also mentioned solos, *Duettkonzerte* and partitas written by Haudek for his many pupils (among whom were Franz Wiesbach and Giovanni Punto). Haudek became ill in 1786 and retired in 1796 because of paralysis, though in 1800 he told Dlabacž he had completed 52 years with the Dresden orchestra. He was succeeded there by his son Carl Joseph (*b* Bohemia, 1762; *d* Dresden, 10 Oct 1832), who had taken over some of his father's duties in 1786. Carl Joseph was named *Kammermusikus* in 1826 and retired in 1827.

REGINALD MORLEY-PEGGE/HORACE FITZPATRICK/THOMAS HIEBERT

**Haudlo, Robert de.** *See* ROBERT DE HANDLO.

**Haueisen, Wolfgang** [Wilhelm] **Nicolaus** (*b* Öhrenstock bei Gehren, 4 April 1740; *d* Frankfurt, 1 March 1804). German publisher, composer and organist. From 1769 he was organist of the reformed church in Frankfurt and conducted and played in public concerts. In 1771 he started a music publishing business, mainly for works by local composers, but by 1787 it had been taken over by the firm of André in Offenbach. Haueisen wrote four sets of three sonatas for piano, violin and cello (op.1, Amsterdam, 1770; opp.2–4, Frankfurt, 1771, lost) and two piano concertos (opp.5–6, Frankfurt, 1772–3). (*EitnerQ* also mentions three cantatas in *D-GOl.*) These are clearly the works of an organist who incorporated in them the musical qualities of that instrument and the harpsichord. Haueisen's style is simple and his themes consist of short, not particularly inventive, motifs. The sonatas were probably more popular in his day than the concertos.

HUBERT UNVERRICHT

**Hauer, Josef Matthias** (*b* Wiener Neustadt, 19 March 1883; *d* Vienna, 22 Sept 1959). Austrian composer and theorist. He attended the Wiener Neustadt Teacher Training Institute (1897–1902) and then, apart from breaks for war service, taught in elementary schools in Krumbach and Wiener Neustadt until he was prematurely pensioned off in 1919. At the same time he was active as an organist, choral conductor and cellist. He taught himself theory and composition, passed further state examinations as a teacher of singing, the violin and the piano, and at the age of 28 began to compose. His early works, opp.1–18 (1912–19) – chiefly songs and piano pieces which Hauer described retrospectively as the 'first onset of my 12-note music' – are freely ranging miniatures of strong chromatic colouring. They are no more serial than are the contemporary pieces of Schoenberg and Webern, whose aphoristic forms and, at times, expressive gestures they share, while lacking their density and terseness of motivic elaboration.

Hauer himself lived in Vienna from 1915, and there he associated with Altenberg, Bahr, Kraus, Loos and Itten. In 1918, in close collaboration with the philosopher Ebner, he wrote his first theoretical work, *Über die Klangfarbe*. The summer of 1919 brought a decisive change of direction: Hauer discovered his 'law of the 12 notes', which required that all 12 notes be sounded before any is repeated. The compositional outworking of the 'law' was evident in the suitably titled keyboard piece *Nomos* op.19, and was first articulated theoretically in *Vom Wesen der Musikalischen*, published in 1920, hence before the earliest writings on Schoenberg's twelve-note technique. Like Schoenberg, Hauer held that each composition should be based on a specific arrangement of the 12 pitch classes, which he called the 'Konstellation' or 'Grundgestalt' ('basic shape'). But Hauer's system did not involve a fixed serial succession. Instead he understood the 12-note aggregate as a trope, i.e. an unordered series of segments, each of which was specified according to pitch-class content but not order (*see* TWELVE-NOTE COMPOSITION, §1). His investigations were focussed primarily on tropes consisting of pairs of hexachords, of

which he identified 44. The notes of a trope could be deployed in the melodic or harmonic dimensions, or in both simultaneously: Hauer's methods of building textures – from strict monody to simple, transparent counterpoint – were exhaustively explained in *Vom Melos zur Pauke* (1925) and *Zwölftontechnik* (1926).

Despite the notable differences in their compositional approaches, the points of similarity between the researches of Schoenberg and Hauer proved enough to provoke a measure of rivalry between them. Hauer had approached Schoenberg as early as 1913 with a request for an opinion of his work; at their first personal meeting, in Vienna in 1917, Hauer played extracts from his works; in 1919 Schoenberg presented some of Hauer's compositions within the Verein für Musikalische Privataufführungen; finally, in 1923, Hauer initiated a brief correspondence and discussion, but the personal and intellectual tensions between the two, Hauer effectively claiming priority over Schoenberg in the discovery of 12-note composition, made the planned cooperation impossible.

Hauer also differed from Schoenberg in his creative philosophy. The central concept of Hauer's theory was 'Melos', to which 'Rhythmus' functioned as a counter-concept; Melos was associated with atonal music and Rhythmus with tonal music. Within the field of tension between these poles – which Hauer linked with other paired ideas such as spirit and instinct, myth and language, intuition and idealism – he considered that mankind, and not only music, had evolved. For Hauer, Melos was the only true, objectively immanent and fundamental law of music, and the composer's function was to be an 'interpreter of Melos'. He detested all art that expressed ideas, programmes or feelings, demanding a purely spiritual, supersensual music composed according to impersonal rules. While Hauer continued, until the late 1930s, to write concert works in traditional genres, his music aspired increasingly towards this ideal of depersonalization and objectification, which came closest to fulfilment in the *Zwölftonspiele* of the 1940s and 50s.

From 1921 Hauer was extremely productive, composing in almost all genres using a form of 12-note notation of his own devising. The best works of this period, and indeed of his whole output, are two of the Hölderlin settings, *Wandlungen* and *Der Menschen Weg*. These are works of well-constructed melody, purposely uniform rhythm and colourful, brittle orchestral texture, the poised character of the music forming a sort of counterpoint to the voluptuous drift of the words. But only a few works of this period were performed. In 1924 Hauer was represented at Donaueschingen by the *Hölderlin-Lieder* op.12 and the String Quartet op.30, and at the Vienna Festival by the First Orchestral Suite. He won wider renown with the premières of the Seventh Orchestral Suite (1927 ISCM Festival) and *Wandlungen* (1928 Baden-Baden Chamber Music Festival). Klemperer conducted the opera *Salambo* in an incomplete concert performance in Berlin in 1930, and in the same year the Violin Concerto was given at the ISCM Festival. In 1927 Hauer received the Vienna Artist's Prize and from 1930 he was paid a state honorarium.

The political upheavals of the 1930s put an end to Hauer's public activities. His music was pronounced decadent and some of his scores were included in the touring exhibition of 'degenerate art'. In 1938 he retired completely, writing his last opus-numbered work the following year. Throughout a final period of 20 years, he wrote exclusively *Zwölftonspiele*, designated sometimes by number, sometimes by date; about 1000 such pieces were written, most of them lost. They reveal a still more thoroughly objectified and simplified technique: melodies are strictly athematic, the part-writing is undifferentiated, tempo and dynamics impose inarticulate medium values, and the scoring, whether for piano, quartet or chamber orchestra, is mostly interchangeable. The elaboration of the material is mere manipulation, the selection of fixed procedures from an imaginary catalogue – with such operations composition has become a game.

After World War II there was renewed interest in Hauer, with performances, broadcasts and essays. In Vienna in 1953 Rosbaud conducted the first performance of *Der Menschen Weg* and the Konzerthausgesellschaft accorded Hauer honorary membership. In 1954 he was granted the title of professor and in 1955 he received the Major Austrian State Prize. His artistic remoteness, prolix musical philosophy and whimsically ascetic way of life surrounded him with legend during his lifetime, and he fascinated writers of his generation to an unusual degree: there are disguised references to his person and doctrine in novels by Bahr, Stoessl, Hesse (*Das Glasperlenspiel*) and Werfel (*Verdi*). Since the 1960s, in debates on serial and minimal music and particularly on John Cage's concept of 'non-intentional' music, Hauer's compositions and writings have attracted renewed interest and a deeper appreciation of their values.

WORKS

LARGE-SCALE VOCAL

| op. | |
|---|---|
| 7 | 5 Chorlieder (Sophocles), male vv, pf/org, 1914 |
| 11 | Prometheus (J.W. von Goethe), Bar, pf/orch |

MONIKA LICHTENFELD

**Hauf, Carlous von der.** *See* HOEVEN, CARL VAN DER.

**Haug, Halvor** (*b* Trondheim, 20 Feb 1952). Norwegian composer. He studied at the Oslo Conservatory with Kolbjørn Ofstad and spent a year (1973–4) at the Sibelius Academy in Helsinki, studying with Englund and Bergman. Later he worked with Robert Simpson in London.

Since his first orchestral success with *Symphonic Picture* in 1976, Haug has been associated with an orchestral sound of an almost Romantic fullness, and with clear form and polyphonic lines. He has received several commissions from leading institutions, and his symphonic music, colourful and rhythmically varied within a moderate modern musical language, has been well received by a wide audience and performers alike. His *Insignia*, a commission from the Lillehammer Olympics of 1994, is typical of his mature style, with its blend of tonal lines interspersed with areas where colours and sound are more important. His chamber music is equally varied. His string quartet (1996) and piano trio (1995), both commissioned by leading Norwegian chamber groups, seem to step into a more experimental phase of his composition.

ARVID O. VOLLSNES

**Haug, Hans** (*b* Basle, 27 July 1900; *d* Lausanne, 15 Sept 1967). Swiss conductor and composer. He studied at the Basle Conservatory and with Courvoisier and Pembaur in Munich. Returning to Switzerland he was appointed musical director at Grange and Solothurn, choirmaster and assistant conductor at the Basle City Theatre (1928–34), and then conductor of the French Swiss RO (1935–8) and of the Beromünster RO (1938–43). Later he worked as a teacher and a guest conductor in Switzerland and other countries. As a composer he had most success with his eight operas and with various radio operas and operettas; he also wrote orchestral works, chamber pieces, choruses and film scores, all in a light style drawing something from Wolf. Avoiding contrapuntal and tonal complication, his music was designedly popular in appeal. (Manuscripts of his works can be found in *CH-LAcu*.)

BIBLIOGRAPHY

FRITZ MUGGLER

**Haugk, Virgilius** (*b* Bohemia, between 1490 and 1500; *d* Breslau (now Wrocław), before 1555). German composer. In 1522 he apparently gave up a living in Neisse (now Nysa, Poland) where a Silvester Haugk, perhaps his brother, had been Kantor for a long time. From 1538 to 1544 he was Signator (i.e. Kantor or assistant Kantor) in Breslau. Around 1540 both of the main churches there, St Elisabeth and St Maria Magdalena, maintained schools, and Haugk had church and school duties. His wife's will of 1555 makes it clear that he was dead by that time.

Haugk's treatise *Erotemata musicae practicae ad captum puerilem formata* (Breslau, 1541) is a thorough, if somewhat lengthy, exposition of the rudiments of music. Even at this late date it deals fully with mensural notation so that the music of Ockeghem and Josquin and of their contemporaries may be understood. It describes Josquin as 'musicus sine controversia excellentissimus'. In some of Haugk's hymns the use of equal voices, a cantus firmus that largely merges into the surrounding texture, and imitative duo sections show Flemish influence. Others are more closely related to his more old-fashioned German contemporaries, having a migrating cantus firmus which is rarely imitated by the more melismatic free parts. His only surviving composition with German words is an ingenious five-voice motet, which uses two chorale tunes by Luther as simultaneous cantus firmi.

WORKS

Erotemata musicae practicae ad captum puerilem formata (Breslau, 1541)

4 hymns, 4–5vv, 1542[12], ed. in EDM, 1st ser., xxi (1942/*R*), xxv (1943/*R*)

WILFRIED BRENNECKE

**Haugland, Aage** (*b* Copenhagen, 1 Feb 1944). Danish bass. He was a soloist with the Copenhagen Boys' Choir and later studied music and medicine at the university there; he made his début with the Norwegian Opera in 1968 in Martinů's *Comedy on the Bridge*. In 1973 he became a member of the Danish Royal Opera, with which he has a permanent contract as First Bass. His British début was in 1975 as Hunding at Covent Garden, and he sang a

formidable Hagen with the ENO the same year, later recording the role with Goodall. In 1979 he made his American début at St Louis as Boris, then sang Ochs at the Metropolitan, where he has since taken several other roles, including Wozzeck. He sang King Henry in *Lohengrin* for his début at La Scala in 1981, and Hagen at Bayreuth in 1983. Haugland's big, warm and evenly produced voice has also been heard to advantage as Rocco, Fafner, Gremin, Prince Ivan Khovansky and Klingsor, the last two of which he has recorded. Notable among his other recordings are operas by Danish composers, including Heise's *Drot og Marsk* ('King and Marshal'), Nielsen's *Maskarade* and *Saul og David*, and Nørgård's *Siddhartha*.

NOËL GOODWIN

**Hauk, Günther** (*b* Chemnitz, 6 May 1932; *d* Berlin, Oct 1979). German composer. He studied at the Berlin Hochschule für Musik (1952–7), first musicology and then composition with Günter Kochan and Wagner-Régeny. From 1957 to 1959 he attended Eisler's masterclasses at the German Academy of Arts in Berlin. In 1957 he was appointed music director of the Maxim-Gorki-Theater and in 1963 of the Volksbühne, both in Berlin. His music shows the influence of Wagner-Régeny and Eisler, but there are also resemblances to Stravinsky, and Hauk's rhythm owes something to jazz. But above all, he shows an evident ability to find meaningful and witty musical responses to words and gestures.

ECKART SCHWINGER/R

**Hauk, Minnie** [Hauck, Amalia Mignon] (*b* New York, 16 Nov 1851; *d* Villa Triebschen, nr Lucerne, 6 Feb 1929). American soprano, later mezzo-soprano. She first studied with Gregorio Curto of New Orleans. Shortly after 1860 her family returned to New York, where she studied with Achille Errani at the suggestion of Max Maretzek, who subsequently signed her to a contract with his company. Her operatic début, when she was 14, was in Brooklyn, as Amina in *La sonnambula* (13 October 1866); her New York début was as Prascovia in Meyerbeer's *L'étoile du nord* (3 November 1866). She toured with Maretzek's company (1866–7) and sang Juliet in the American première of Gounod's *Roméo et Juliette* at the New York Academy of Music (15 November 1867). On her first trip to Europe in 1868, financed by the publisher Gustav Schirmer, she was accompanied by her mother, a constant companion and close adviser throughout her career.

In Paris Hauk studied with Maurice Strakosch and made her début in spring 1869. Her London début, at Covent Garden, was the following October with J.H. Mapleson's company, with which she was associated for many years. After appearances in Italian opera in Paris, Moscow and St Petersburg (1869–70), she sang in German opera in Vienna (1870–73) and Berlin (1874–7); in the latter she was a principal during the first season of the Komische Oper (1874). In 1878 Hauk had engagements in Brussels and London, during which she first sang the title role of *Carmen*. Later that year she toured the USA with Mapleson's troupe; she performed in both London and the USA until 1881. That year she married Baron Ernst von Hesse-Wartegg, an Austrian nobleman, journalist and author; they mounted a worldwide concert tour that lasted three years. She sang the title roles in the first American performances of *Carmen* (23 October 1878) and *Manon* (23 December 1885). Her only season at the New York Metropolitan Opera was 1890–91. She subsequently organized her own (short-lived) opera company, which presented the first Chicago performance of *Cavalleria rusticana* (28 September 1891). Her last operatic appearance in America was as Selika in Meyerbeer's *L'Africaine* (Philadelphia, 4 November 1893); her final London performance was as Santuzza in *Cavalleria rusticana* (8 February 1895). Hauk subsequently lived mainly in Switzerland with her husband; after his death in 1918 she lived in Berlin.

Hauk's voice was a mezzo-soprano of great force and richness; she was also an accomplished actress who is credited with infusing Italian opera with powerful dramatic realism. She was a quick study and had an enormous repertory (about 100 parts). She sang fluently in four languages and was best known for her performances of Carmen (which she sang some 500 times), although *L'Africaine* became a popular vehicle late in her career.

H. WILEY HITCHCOCK/KATHERINE K. PRESTON

**Hauksson, Thorsteinn** (*b* Reykjavík, 4 Aug 1949). Icelandic composer. He studied the piano (R. Sigurjónsson) and composition (Sigurbjörnsson) at the Reykjavík College of Music, graduating in 1974. He received the master's degree from the University of Illinois, where he studied with Salvatore Martirano and Ben Johnston (1975–80). He then undertook research at IRCAM, Paris (1978–80), developing computer techniques which resulted in his Etudes and Sonata (both 1980). He continued his graduate studies at Stanford University with Chowning (1980–87). After his return to Iceland he was appointed to teach composition and electronic music at the Reykjavík College of Music.

Hauksson's research into the acoustical properties of sound has had a significant impact on his composition. Both the Two Etudes (1980) and *Are we?* (1980) use techniques associated with SPECTRAL MUSIC, the latter taking the overtone spectra of brass instruments as the basis for the electronic sounds. *Ad astra* (1982) is a slow-moving piece comprised of multiple layers of *Klangfarbenmelodien*, while the work *Bells of Earth* combines computer-manipulated sounds (including that of a bell

sculpture in Kunitachi, Japan) with the full symphony orchestra. His largest work *Psychomachia*, still in progress in 1999, was conceived originally as a piece for soprano and cello, but was later extended to incorporate two other works, *Sapientia* (1990) and *Ever-Changing Waves* (1995). His work on *Psychomachia* has led him to develop a more retrospective musical language, which includes elements of traditional polyphonic writing alongside the contemporary techniques characteristic of his output as a whole.

ÁRNI HEIMIR INGÓLFSSON

**Haultemant, Nicolas.** *See* HOTMAN, NICOLAS.

**Haulteterre.** *See* HOTTETERRE family.

**Haulteterre** [Hauteterre, Hotteterre], **Elisabeth de** (*fl* 1737–68). French composer and violinist. She did not come from La Couture where the Hotteterre family of musicians originated, and there is no demonstrable connection between her and that family. In April 1737 the *Mercure de France* reported that 'Miss Hotteterre, young lady recently arrived from the provinces, has played [at the Concert Spirituel] several times on the violin various sonatas by Mr Leclair with all the intelligence, vivacity, and precision imaginable'. At the end of 1740 her *Premier livre de sonates* for violin and continuo appeared in Paris, dedicated to Jean-Marie Leclair *l'aîné*. An 'investigation of bowstrokes for novices' included in this book suggests that she gave lessons on the violin. The publication of her second *Concerto à cinq*, for four violins, organ and cello, dedicated to Princess Adélaïde, was reported in the *Mercure* of January 1744. A second book of violin sonatas is listed in a catalogue of Le Clerc *l'aîné* from 1751. The next and final known mention of her appeared in 1768 (*Avant-courier*, 14 November, and *Mercure*, December) when the publication of a *Deuxième recueil d'airs choisis*, with accompaniments for the harp composed by 'Madame Lévesque, formerly mademoiselle de Haulteterre', was announced. These notices, and the title-page of a previously published *Recueil de chansons* with accompaniments for harp or harpsichord, probably indicate the correct spelling of her name and suggest that she may have taught voice or harp as well as violin. None of her violin compositions seems to have survived.

JANE M. BOWERS

**Haultin, Jérôme** (*fl* 1574–1600). French typefounder. He was active in London from 1574 to 1586; later he managed the firm of his uncle PIERRE HAULTIN.

**Haultin, Pierre** (*d* ?La Rochelle, ?1589). French typographer and printer. In 1572 he began issuing music books at La Rochelle, including eight sets of Lassus partbooks (four *Mellange* collections, 1575–7, and four collections of *Moduli*, all 1576) and two books of Jean Pasquier's *Cantiques et chansons spirituelles* (1578), as well as at least five editions with music of the psalm paraphrases of Marot and Bèze (1572–86). Haultin's nephew, Jérôme, active as a typefounder in London from 1574 to 1586, managed the firm in La Rochelle between 1590 and 1600, where he issued at least nine more psalm books as well as the 1598 edition of Le Jeune's *Dodecachorde*. Jérôme Haultin's heir was his son-in-law, Corneille Hertman, who issued Le Jeune's *Les pseaumes … à 4 et 5 parties* (1608) and more psalm books (the latest known one dated 1616). One more psalm book (1623) bears the imprint of Hertman's successor, Pierre Pié de Dieu.

Early in his career, Haultin, who was Hugenot, was highly respected as a type designer. In 1547 he cut music punches and struck the matrices for the Parisian printer NICOLAS DU CHEMIN. Probably he also cut the two other music faces which were used in his own editions and those of his heirs. The larger of these, with several substitutions of the sorts (e.g. some note heads and the treble clefs), is the same face that appears in the partbooks printed in London by Thomas Vautrollier (Lassus: *Recueil du mellange*, 1570, also Byrd and Tallis: *Cantiones sacrae*, 1575), as well as in the madrigal partbooks printed by Thomas East, Thomas Snodham and their successors. The smaller Haultin face was probably also used in various French Huguenot and Dutch music books, although it is difficult to identify conclusively.

There seems to be no likely basis in fact for two assertions made about him. In his *Traité historique et critique*, Pierre Fournier maintained that Haultin cut the first punches for music type about 1525, but this statement conflicts with what is known about PIERRE ATTAINGNANT and the origins of French music typography. The typographer Guillaume Le Bé (ii), in his 'memorandum' of 1643, reported that Haultin was active as early as 1500; however, if there was an older Pierre Haultin, nothing is known of him. Most scholars now believe that both Fournier and Le Bé were simply in error.

**Hauptmann, Moritz** (*b* Dresden, 13 Oct 1792; *d* Leipzig, 3 Jan 1868). German composer, theorist and teacher. After studying the violin and composition with Spohr (1811), Hauptmann worked as a violinist in Dresden (1812–15). From 1815 to 1820 he was the private music teacher to Prince Repnin's household in Vienna. After two more years in Dresden he went to Kassel as court chapel violinist under Spohr and remained there for 20 years. During that time he developed a reputation as composer and theorist. In 1842 he was appointed Kantor of the Thomasschule in Leipzig, on the recommendation of Spohr and Mendelssohn. The next year he was appointed teacher of theory and composition at the newly founded Leipzig Conservatory. Also in 1843 he was editor of the *Allgemeine musikalische Zeitung*. In 1850 he became a founder-member of the Bach-Gesellschaft; he edited three volumes and remained president of the society until his death. Hans von Bülow, Ferdinand David, Salomon Jadassohn, Joseph Joachim and C.F. Weitzmann were among his many students.

In his compositions, theoretical works and historical endeavours, Hauptmann displayed a taste for classical proportion, formal order, metrical clarity and tonal logic. His sacred and secular vocal pieces, as well as his instrumental compositions, were well received and were a staple of the choral repertory.

In his principal theoretical work, *Die Natur der Harmonie und der Metrik* (1853), Hauptmann aimed at a philosophical understanding of musical phenomena rather than a technical knowledge of them, an approach that he felt filled a gap among contemporary theory texts. For Hauptmann, the principles underlying music must be universally true of human thought. His basic principle comprises the elements unity, opposition and (re)union (higher unity). Hauptmann's direct source may have been Hegel's dialectic, idealist philosophy in general, Goethe or Lutheran theology, or some combination of these. In any case, Hauptmann's theory is often termed 'Hegelian'. It has been called 'deductive, transcendental and dialectical' (Rummenhöller, 1963).

For Hauptmann, the concepts of unity, opposition and reunion underlie all musical elements. They structure chords, scales, keys, key relationships, chord progressions, dissonance and its treatment, and non-harmonic notes. They also structure metrical formations and rhythmic phenomena.

A major triad proceeds from the root ('positive unity'), which determines the fifth (opposition) and major third (reunion) above it. The minor triad proceeds from the fifth ('negative unity'), which is determined by the root (opposition) and major third (reunion) below it. This conception of the major and minor triads as opposites, one conceived upwards from the root and one conceived downwards from the fifth, was highly influential on later 'harmonic dualists', including Riemann.

A strict proponent of just intonation, Hauptmann determined key orientation in part by tuning: the sixth degree of C major (A) would be lower than the second degree of G major. Since just intonation eliminates enharmonic equivalence, he considered enharmonic progressions unnatural.

Hauptmann's metrical theory recognizes a basic two-beat unit of strong followed by weak. Duple metre (one unit) is considered 'unity', triple metre contains two overlapping units (opposition) and quadruple metre combines two separate units (reunion). Hauptmann considered any 'metrical first' element to be automatically accented.

WORKS

*printed works published in Leipzig unless otherwise stated*

SACRED VOCAL

2 masses: f, solo vv, chorus, op.18 (?1842); g, solo vv, chorus, orch, op.30 (1842), with grad and off

Herr, Herr, wende dich zum Gebet, cant, solo vv, chorus, 4 trbn, org, op.38 (*c*1854)

Lauda anima mea, off, 4vv, org/pf, op.15 (?*c*1840)

16 motets (for solo vv and chorus unless otherwise stated): Salvum fac regem, Domine, 4vv, op.9 (*c*1820); Salve regina, 4vv, org/pf, op.13 (Berlin, 1822); Nimm von uns, Herr Gott, op.34 (1852); 3 Motetten, op.36 (1852): Komm, heiliger Geist, Herr, unser Herrscher, Ehre sei Gott (with 2 hn, 3 trbn); 3 Motetten, op.40 (*c*1855); 3 Motetten, op.41 (*c*1856); Wie lieblich sind deine Wohnungen (Ps lxxxiv), op.45 (*c*1859); Wer unter dem Schirm des Höchsten sitzet (from Ps xci), op.48 (*c*1860); Herr, wer wird wohnen (from Ps xv), op.51 (1861); Ich danke dem Herrn (from Ps cxi), op.52 (*c*1861)

46 other sacred songs: 6 in op.33, solo vv, chorus (*c*1852); 6 in op.35, S, S, A (1852); 6 in op.42, 4vv (1856); 3 in op.43, chorus, orch (*c*1857); 3 in op.44, chorus (1858); 3 in op.53, chorus (*c*1865); 12 in op.54, S, S, A (*c*1865); 3 in op.56, chorus (*c*1865); Sei mir gnädig, Gott, solo vv, 2 choruses, op.57 (*c*1865); 2 Marienlieder, Mez, pf, op.58 (*c*1865); Nun schwebt auf Engelsflügeln, S, A, B, pf, in Deutsche Jugend, iii/3 (1873)

JANNA SASLAW

**Hauptsatz** (Ger.). First SUBJECT GROUP.

**Hauptstimme** (Ger.: 'main part'). The name given by Schoenberg and Berg to a polyphonic part in a passage of 12-note or other rigorously non-tonal music that is of primary importance; *Nebenstimme*, 'subsidiary part', is applied to a part of secondary importance. In performance, *Hauptstimmen* and *Nebenstimmen* are to be treated as important melodic lines and articulated more prominently than other, accompanimental parts. In Schoenberg's and Berg's scores they are indicated by bracket-like signs attached to the letters H and N. To these Berg added a sign attached to HR, for *Hauptrhythmus*, to indicate a prominent recurring rhythmic motif; similarly he used a sign attached to CH to mark off sections of the chorale melody used in the second movement of his Violin Concerto. Webern did not use the *Hauptstimme* and *Nebenstimme* signs in his scores, but the issue they were designed to address was nevertheless of great concern to him. Indeed, Leopold Spinner argued in 'The Abolition of Thematicism and the Structural Meaning of Twelve-Note Composition' (*Tempo*, no.146 (1983), 2–9) that the concept of *Hauptstimme* is the key to the homophonic design of Webern's 12-note works.

□

**Haupttonarten** (Ger.: 'primary keys'). With reference to a given tonality, the keys of the tonic (I), subdominant (IV) and dominant (V). In minor keys the mediant often rivals the subdominant (and even the dominant) in importance as a temporary tonic.

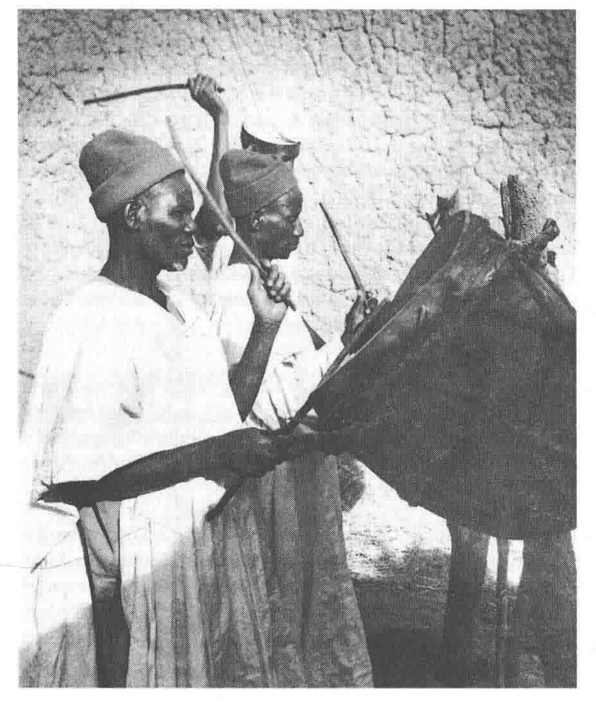
**Hauptwerk** (Ger.: 'chief department'; Dut.: *Hoofdwerk*). Like GREAT ORGAN, *Grand orgue* and *organo primo* in some of their usages, *Hauptwerk* today denotes the main manual of an organ. *Werk* itself is an equivalent to *opus* used in church documents (Utrecht, *c*1400) or theoretical manuscripts (Arnaut de Zwolle, *c*1450, *F-Pn* lat.7295), and was first used to refer to the organ in general (Schlick, *Spiegel der Orgelmacher und Organisten*, 1511). It soon meant by implication the main manual, i.e. the first to be planned, that with the main chorus – as distinct from (a) the CHAIR ORGAN, (b) the POSITIVE below or above the main chest, and (c) the pedals (*see* PEDAL). Praetorius (1619) still used OBERWERK to refer to this main manual, since it was placed above the player; other terms had been *Principael* (referring to its purpose of supplying the *Blockwerk*), *Werk* (Gorinchem, 1518), *Manual* (Schlick, 1511), *der vulle Orgel* (Hamburg, 1548), *Prinzipall-Lade* (Münster, 1610). Terminology became stable early in the 17th century, but it was some time before *Hauptwerk* (Würzburg, 1614) became the most usually accepted term. The contents of the *Hauptwerk* and its relationship to the other departments are the history of the organ itself.

PETER WILLIAMS

**Hauricq** [Haurkus], **Damianus.** *See* HAVERICQ, DAMIEN.

**Hausa music.** Hausa music in northern NIGERIA stands in a select company of arts in West Africa that not only flourish within their own traditions but also extend their cultural hegemonies outside national boundaries. With its major creative centres in the cities and towns of the sultanate of Sokoto, the emirates of Katsina and Kano, and to a lesser extent those of Zaria and Bauchi, its audiences are found not only in Nigeria itself, but also in NIGER, Chad, Benin, Ghana and Sierra Leone. Although regional differences often mark individual performances, Hausa music nevertheless exhibits an overall stylistic unity that separates it from the music of neighbouring cultures.

1. BACKGROUND. Early accounts of the music, that is from the time of its origins in the early Hausa kingdoms before the 16th century up to the arrival of the British at the turn of the 20th century, are rare. There is evidence, however, for a considerable, though perhaps superficial, North African influence up to and including the 18th century. Initially this influence reached the Hausa states via the empires of Songhai and Mali in the west, and Bornu in the east. Its major impact appears to have been on ceremonial music, which served the rising power of the Hausa states, especially on the fall of the Songhai empire at the end of the 16th century. Although our knowledge in this respect is almost wholly confined to the borrowing of instruments that originated in the Maghrib, in the case of ceremonial instruments, borrowings clearly went hand in hand with a transfer, although modified, of their role. Thus the KAKAKI (a long trumpet; fig.1), which was associated with military power in the Hausa states and which was introduced into state ceremonial music during the 16th century, was in use by the Songhai cavalry at the beginning of that century. The TAMBARI (a large kettledrum; fig.2), to this day a symbol of sovereignty, relates both in material form and ceremonial usage to the court *ṭabl* at Fez at the beginning of the 16th century. The ALGAITA oboe derives from the Maghribi *ghayṭa*, but does not appear in a ceremonial role in Hausa music until the 18th century.



These borrowings were not, however, confined to ceremonial music. The GOGE (a single-string bowed lute or fiddle), condemned by religious teachers as an agent of immorality, stems from the Maghribi *ghugha*. Reciprocal borrowings also took place. The *shantu*, a women's

1. *Kakaki (trumpet)*

percussion tube, was carried across the Sahara from Hausaland and Bornu and reached North Africa as a by-product of the trade in female slaves. Most instrument borrowings followed the north–south route and after various assimilations were in turn passed on until they finally reached the southern and coastal areas of West Africa. A notable example is the hourglass drum, which was first noted in the Maghrib at the beginning of the 14th century. It occurred in Hausa music at a fairly late date in various forms as the KALANGU, the *jauje* and the *kotso*, and finally reached the West African coast at the beginning of the 18th century. Thus the Yoruba set of double-headed *dundun* drums, the Akan *donno* drum and the single-headed Yoruba *koso* (directly linked to the Hausa *kotso*) are but three examples of an instrumental migration that spanned almost four centuries.

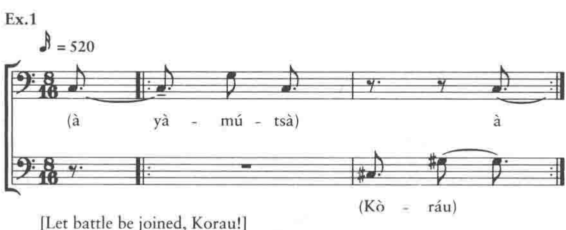
Islamic attitudes to music, and in particular those upheld by Usuman D'an Fodiyo in his reformatory *jihad* against the Hausa states at the beginning of the 19th century, did not impose any lasting restrictions on music, nor did they effect any notable changes in musical practices that had their roots in the pre-*jihad* or *Hab'e* states and which continued to flourish in the post-*jihad* emirates. D'an Fodiyo himself proclaimed that 'A drum should only be beaten for some legitimate purpose, such as for calling a meeting, announcing the departure of an army, when it pitches camp or returns home and the like'; he continued, 'How much worse, then, is what the ignorant people do playing musical instruments for entertainment and singing?'. Nevertheless, the rich variety of present-day music stems directly from 19th-century practice, and in particular from the three types of music that predominated: state ceremonial, court praise-song and rural folk music.

2. STATE CEREMONIAL MUSIC. Ceremonial music, or *rok'on fada*, remains, as in the 19th century, a symbol of traditional power. As such, it is as opposed to change as the power that bred it. It is still largely dominated by instruments of external origins and, with its highly

2. *Tambari (kettledrum)*

3. *Farai (trumpet)*

functional role, maintains itself apart from the mainstream of musical developments. This separation, particularly in musical aesthetics, has led to the rejection of state ceremonial music by large sections of the society who see its instruments as the prestige symbols of the authority they serve rather than hear them as makers of music.



The most important ceremonial instruments are the *tambura* (sing. *tambari*), the state drums, and *kakakai* (sing. *kakaki*), the long state trumpets. Less important ceremonial instruments include the *farai* (a short wooden trumpet; fig.3), the *k'afo* (a side-blown animal horn) and the GANGA (a double-headed snared drum; fig.4); these are probably indigenous to this part of Africa.

The occasions for state ceremonial today are ultimately controlled by the emir as traditional head of state and successor to a *Hab'e* kingdom. Although variations occur between emirates, the main occasions are usually *sara*, the weekly statement of authority on Thursday evenings outside the emir's palace; *Babbar Salla* and *K'aramar Salla*, the major religious festivals, on which the emir rides in procession to and from the mosque; and *nad'in sarauta*, the installation of emirate officials, including that of the emir himself. Other occasions for state ceremonial are the emir's departure or return from a journey, visits from other emirs or figures of national importance and such occasions as weddings and births within the emir's family. Senior emirate officials often have their own bands, and, while these do not use the same instruments as the state bands at the central court, they play on similar occasions and generally model their performances on those of the state musicians.

Two major state bands are found in almost every emirate and comprise a consort of either five or six *tambura* or the more heterogeneous combination of the *kakaki*, the *farai* and the *ganga*. The inclusion of the *k'afo* in this second ensemble is rare, the usual composition of the band being a solo *kakaki* with six or more chorus trumpets, one or two *farai*, and up to 12 *ganga*. The symbolic rather than musical status of these two bands is reflected in their performances, which, on certain occasions, are in close proximity to and in competition with each other. The double-reed *algaita*, though sometimes an instrument at an emir's central court, is more often an instrument of his senior officials. In combination with one or more lesser snared drums, or *gangar algaita*, it is used as a solo instrument or in groups.

Performance on ceremonial instruments, and in particular the ensemble of *kakaki*, *farai* and *ganga*, is usually based on the melodic and rhythmic realization of a normally unverbalized text known as a *take*. The instrumentalists are joined by a vocalist who acclaims his patron through the performance of a *kirari*. *Take* texts are usually epithetical and are further distinguished from *kirari* texts by being traditional to the office they celebrate rather than to the office holder and patron. Their instrumental realization is possible because Hausa is both a tonal and a quantitative language, that is, its meaning depends in part on syllabic pitch and length. Texts are thus 'performed' on instruments by an imitation of the sequences of pitch and to a lesser extent length values that mark their spoken forms. The musical realization of a *take* for the office of the Emir of Katsina as performed by a solo *kakaki* and chorus is shown in ex.1. The trumpets,

Ex.1

solo and chorus, produce their 2nd and 3rd partials, the chorus being pitched a semitone higher than the solo. Acute and grave accents mark high and low tone syllables in the text, and the sequence of long and short syllables is shown in its scansion.

4. *Ganga (double-headed drum)*

3. Court praise-song. While appointments in ceremonial music, whether as overall head or as a section leader, are made primarily on hereditary grounds, appointment as a praise-singer is almost always on musical grounds. Because praise-singing is not always a hereditary profession, its standards are on the whole more rigorous than those of ceremonial music. *Yabon sarakai*, praise of officials in song, is the most generally esteemed form of music in Hausa society today. Two styles of praise-song can be distinguished, the first based on the urban classical traditions of the past and the second a product of popular music of more recent origins. Songs in the classical tradition are performed by professional singers devoted exclusively to this art form. As court musicians, they depend on the patronage of a single patron, and the more powerful a patron, the more competition there is for his patronage. The best praise-singers thus gravitate to the courts of a limited number of office holders. Praise-songs in the style of popular music are performed by freelance musicians who compose for a number of patrons, generally those who offer the greatest rewards. There is therefore a tendency for praise-song, whether classical or popular, to centre on a selected group of officials within an emirate.

The instrumental accompaniments to classical praise-songs are supplied by the singer together with his *masu amshi* (chorus) on drum sets traditionally associated with this kind of court music. The instruments most frequently used are the *banga* and *tabshi* (fig.5), both small kettledrums, and the *jauje* and *kotso*, hourglass drums of which the former has a double membrane and the latter a single.

The classical praise-singer composes songs that reinforce his patron's authority by lauding his ancestry, religious devotion, authority, chivalry, generosity and other attributes. He equally undermines the authority of his patron's rivals by ridiculing their inadequacies. While the song text is thus of prime importance, so is the more musical consideration of how it is sung. So interdependent are these two aspects of performance, especially in the interplay of language tones and quantities with musical pitches and rhythms, that the singer's art cannot be evaluated separately in terms of either the text or its setting.

Fragments of praise-songs from the past survive in the public's memory, but the present-day flowering of this genre is largely attributed to the genius of the most celebrated court praise-singer of all, Narambad'a (*c*1890–*c*1960). Narambad'a lived and worked in Sokoto under the patronage of Sarkin Gobir Na Isa Amadu, district head and great-grandson of Usuman D'an Fodiyo. His best songs, such as *Dodo Na Alkali*, *D'an Filinge* and above all *Bakandamiya*, set a standard by which court songs to this day are judged. His most notable successors include Jan Kid'i, D'an K'wairo with his brother Kurna, and Sa'idu Faru, all from Sokoto; Mamman Sarkin Tabshi from Katsina and Aliyu D'an Dawo. They show their indebtedness to Narambad'a by indirect borrowings from his works and by modelling their compositions on his formal structures.

Narambad'a divided his songs, as did his predecessors, into solo stanzas with recurrent chorus refrains. The chorus was allowed to join in the solo stanza towards its end and from there to proceed to the refrain. D'an K'wairo has extended this practice by involving each member of his chorus as a soloist in his own right, each contributing his own stanza to what is nevertheless D'an K'wairo's composition. Narambad'a periodically repeated individual lines, or pairs of lines within a stanza, thus obtaining a balance of length between successive stanzas and at the same time adding emphasis to the lines repeated. In Sarkin Tabshi's songs, repetition occurs in almost every stanza and may range from a couple of lines to the complete stanza. In his longer songs, the refrain itself appears periodically as a stanza with chorus repetition, which divides the composition into major sections each comprising a group of stanzas.

In Narambad'a's songs, lines are on the whole of balanced length. In the songs of his successors, notably Sa'idu Faru and Sarkin Tabshi, not only are lines of balanced length, but the choice of words within lines is so strongly controlled by the song's metre that the whole composition can often be scanned as written poetry. Song metres are relatively restricted in their variety and are in most cases based on a division of the implicit bar into five, six or eight units, notated as semiquavers. The division into five units, as in ex.2 from the refrain of

Ex.2 From the refrain of *Zuwa Tariya Alhaji Maccid'o*

*Zuwa Tariya Alhaji Maccid'o* by Sa'idu Faru, is perhaps the most classical and at the same time most intractable of the metres, allowing almost no rhythmic variation between bars. The division into six units, as in ex.3 from

Ex.3 From the refrain of *Abubakar na Bello*

the refrain of *Abubakar na Bello* by Aliyu D'an Dawo, allows the use of hemiolas between successive measures. The division into eight units, as in ex.4 from the refrain

Ex.4 From the refrain of *Sardauna Namijin Tsaye*

of *Sardauna Namijin Tsaye* by D'an K'wairo, allows a contrast similar to that of a hemiola in the alternation of a sequence of equal lengths (2 : 2 : 2 : 2) with a sequence of unequal lengths (3 : 2 : 3). In almost every song, similar cadential patterns are used to mark the ends of stanzas. Narambad'a frequently reserved the cadential use of his tonic for the end of the stanza and its refrain, and later

*5. Sarkin Tabshi Alhaji Mamman, praise-singer to the Emir of Katsina, with a tabshi (kettledrum)*

singers have often emphasized the tonic by making it the note of lowest pitch in the song as a whole, as in ex.4.

4. TRADITIONAL FOLK MUSIC AND MODERN POPULAR MUSIC. An important feature of Hausa society before the arrival of the British was the separation of urban society centred on the court and its nobility from rural peasant communities on whose agriculture the political system largely depended. The musical outcome was an equally marked separation of urban art music, with its focus on court praise-song, from traditional rural folk music. Under British administration, established at the beginning of the 20th century, the traditional territorial officials were made directly responsible for rural administration and were required to live in the districts for which they held office. The concentration of court musicians in the emirate capitals was dispersed, and court praise and ceremonial music put into closer contact with rural music. In addition, the gradual development of new industries brought a migration of rural workers to the towns; new urban middle and working classes began to emerge, with radio programmes directed at them and gramophone records produced for them. Thus the rapid growth of a popular urban music became possible, drawing its performers from traditional folk music and its forms and styles from urban as well as rural models.

Rural music itself survives with diminished audiences today, and in continual competition with the newer popular music. The latter, together with classical praise-song, now reaches the most distant country areas through radio broadcasts and gramophone recordings. The last strongholds of folk music lie in traditional dancing, such as young girls' *asauwara*, and in *bori*, the pre-Islamic religious acceptance of possession by gods.

Popular music thus flourishes as the real rival of court praise-song, competing with it in two main respects. It appeals to the same general urban audience and is similar to praise-song in the artistry of its leading exponents. Its leading singer, Muhamman Shata, is better known than Narambad'a or his classical successors, and Shata's song *Bakandamiya* stands as a direct challenge to Narambad'a's most celebrated composition, from which it borrows its title and some of its characteristics.

While it rivals court praise-song, popular music is distinguished from it in its use of instruments, whether for the accompaniment of song or for virtuoso display. The *kalangu* (hourglass drum) and its set, originally beaten for butchers and for young people's dances, is now the most popular of the accompanimental instruments because of the example set by Muhamman Shata. The *goge*, used by such virtuosi as Audu Yaron Goge and Garba Liyo, and its smaller counterpart the *kukuma*, popularized by singers like Ibrahim Na Habu, are the main rivals of the *kalangu*. The *kuntigi* (a single-string plucked lute) has a leading exponent as an accompaniment instrument in D'an Maraya, and the *garaya* (a two-string plucked lute), originally identified with songs in praise of hunters, is now used in its various sizes by all kinds of singers.

Because popular song is mostly directed at general audiences rather than at individual members of the ruling classes, it does not have to conform to the same proprieties as court praise-song. Its performers are freer in their choice of subjects for composition, and freer in the place and manner of their performances. Its songs, as exemplified in the compositions of Shata, not only praise the social leaders and the eminent but also denounce them; in the same way gamblers, thieves, drunkards, delinquents, pimps and prostitutes are both praised and ridiculed. Popular song is performed not only at the houses of the illustrious but also in hotels and bars where the general public may pay for admission.

ANTHONY KING

**Hausegger, Siegmund von** (*b* Graz, 16 Aug 1872; *d* Munich, 10 Oct 1948). Austrian conductor and composer. He studied music with his father, Friedrich von Hausegger, a writer on music and advocate of Wagner, and also with Karl Pohlig and Wolf Degner. After beginning his career at the Graz opera in 1895, he held conducting posts in Munich (as joint director of the Kaim Orchestra's Modernen Abende concerts, 1899–1902), Frankfurt (director of the Museum Concerts, 1903–6), Hamburg (conductor of the Philharmonic concerts from 1910) and Berlin (with the Blüthner Orchestra). From 1920 to 1936 he was conductor of the Munich Konzertverein orchestra (later the Munich PO), in which capacity he became a noted interpreter of Beethoven and Liszt, and gave the first performances of the original versions of Bruckner's Ninth and Fifth Symphonies (1932, 1936). He was director and later president of the Akademie der Tonkunst, Munich (1920–34), where his conducting pupils included Karl Höller and Eugen Jochum.

As a composer Hausegger followed in the tradition of the New German School, excelling in symphonic programme music, while manifesting at the same time certain of Brahms's post-classical tendencies. A collection of his articles on music appeared as *Betrachtungen zur Kunst* (Leipzig, 1920).

WORKS
(*selective list*)

Op: Helfrid, Graz, 1890; Zinnober (3, Hausegger, after E.T.A. Hoffmann), Munich, 19 June 1898
Orch: Dionysische Fantasie, sym. poem, 1897; Barbarossa, sym. poem, 1900; Wieland der Schmied, sym. poem, 1904; Natursymphonie, 1911, finale (J.W. von Goethe) with SATB, org; Aufklänge (Sinfonische Variationen über ein Kinderlied), 1917
Choral: Requiem (F. Hebbel), SAATTBB, org, 1907; Der arme Kunrad, TTBB, 1908; 3 gemischte Chöre nach Dichtungen J. Weinhebers, 1938; Morgensegen, T, orch, org, 1925
Solo vocal: 2 Gesänge (G. Keller, F. Hebbel), T, orch, 1902–8; 3 Hymnen an die Nacht (G. Keller), Bar, orch, 1902; 3 Lieder nach altdeutschen Dichtungen, 1v, pf, 1921; 3 Gesänge nach mittelhochdeutschen Dichtungen, female v, va, pf, 1921

□

**Hauser.** Bohemian, later German, family of musicians.

(1) **Franz** [František] **Hauser** (*b* Krasowitz [now Krasovice], nr Prague, 12 Jan 1794; *d* Freiburg, 14 Aug 1870). Baritone and teacher. Having studied with Tomášek in Prague, he sang first with the Prague opera (1817–21, making his début as Sarastro), then in Kassel (1821–5, under Spohr), Dresden (1825–6, under Weber), Frankfurt (1826–9) and Vienna (1829–32). In 1832 he visited London with Wilhelmine Schröder-Devrient. Later engagements took him to Leipzig (1832–5, as regisseur as well as singer), Berlin (1835–6) and Breslau (1836–8). He also made regular guest appearances throughout Germany. On his retirement in 1838 he settled in Vienna as a singing teacher. In 1846 he was appointed director of the newly founded Munich Conservatory. On its reorganization after Wagner's arrival he retired in 1864 and lived at Karlsruhe and Freiburg. According to early critics his style was pure though he was considered cold as an actor; but he gave satisfaction to Weber and was later praised for his interpretations of Mozart's and Rossini's Figaro, Bertram, William Tell and Spohr's Faust. His wide interests won him the friendship of many leading artists and composers, including Mendelssohn, Schumann and Moritz Hauptmann, with whom he often corresponded. As a teacher he was much respected, and among those whom he instructed or advised were Henriette Sontag and Jenny Lind. Hauser's *Gesanglehre für Lehrende und Lernende* (Leipzig, 1866) had a wide circulation. He was an important collector of art and music, with a particular interest in the works of J.S. Bach. His fine library included music manuscripts and letters of Bach, and he was closely involved in the revival of interest in Bach's music. He served as a consultant for the preparation of the Bach Gesellschaft edition, and prepared a thematic catalogue of Bach's works.

(2) **Moritz Hauser** (*b* Dresden, 28 Aug 1826; *d* Königsberg [now Kaliningrad], 31 May 1857). Composer and conductor, son of (1) Franz Hauser. He studied with Mendelssohn and Hauptmann in Leipzig and was music director at Königsberg. He wrote an opera, *Der Erbe von Hohenegk* (Leipzig, 1855), and a number of violin pieces.

(3) **Joseph Hauser** (*b* Frankfurt, 29 Sept 1828; *d* Karlsruhe, 4 May 1903). Baritone, son of (1) Franz Hauser. He had a repertory of more than 130 roles, and also appeared widely as a concert singer. Wagner wanted him to sing Kurwenal in 1865 and Alberich in 1869, but he was refused leave of absence to do so. He was, however, noted as a Wagner singer, and sang the role of Sachs. He inherited and extended his father's collection of manuscripts and instruments.

JOHN WARRACK/DOUGLASS SEATON

**Häuser, Johann Ernst** (*b* Dittichenroda, nr Rossla, 24 Feb 1803; *d* before 1874). German teacher, writer on music and composer. He studied at the University of Leipzig and became a teacher (later professor) of the history of literature at the Gymnasium in Quedlinburg. Beside literary works he published a dictionary of music, a collection of anecdotes about musicians, and other writings on music; he also left more than 100 compositions for piano and organ.

RUDOLF ELVERS

**Hauser** [Houser], **William** (*b* Bethania, NC, 23 Dec 1812; *d* Wadley, GA, 15 Sept 1880). American composer and tune-book compiler. He was a Methodist minister and also worked as a physician. In 1841 he moved to Georgia, settling eventually in Wadley. He compiled *The Hesperian Harp* (Philadelphia, 1848) which, with 552 pages, was the largest shape-note tune-book in common use in the South. In four-shape notation, it contains 36 of Hauser's own compositions as well as many original arrangements of tunes from earlier publications. With Benjamin Turner, Hauser issued a second tune-book, *The Olive Leaf* (Philadelphia, 1878), in seven-shape notation, which included 48 of his own works. Much of the music reflects the northern influence of gospel hymns.

JOHN F. GARST

**Hausmann, Robert** (*b* Rottleberode, 13 Aug 1852; *d* Vienna, 18 Jan 1909). German cellist. He went to the Brunswick Gymnasium in 1861 and studied there with Theodor Müller for about seven years. At the opening of the Berlin Hochschule für Musik in 1869, Hausmann became one of its first cello students, working there under Joachim's direct supervision until 1871; Joachim then introduced him to Piatti, with whom he had lessons both in London and at Cadenabbia. Hausmann then went to Dresden as cellist of the Hochberg Quartet, of which he was a member from 1872 to 1876; during this time he was coached by F.A. Kummer. Appointed second teacher at the Berlin Hochschule, he became sole teacher in 1879; in the same year he replaced Wilhelm Müller in the Joachim Quartet, of which he remained a member until Joachim's death in 1907.

Having made his début in London on 30 April 1877, Hausmann became a frequent and honoured visitor there and gave many important British premières. His association with Brahms led to his playing in a number of world premières, including that of the second Cello Sonata op.99 (written for Hausmann) in 1886. In the summer of 1887 he and Joachim enthusiastically edited and rehearsed Brahms's Double Concerto, giving the first performance on 18 October at Cologne.

A versatile and gifted musician, Hausmann excelled in chamber music; he was also a keen and skilled performer on the bass viol. He inherited his uncle's fine Stradivari cello, dated 1724 and now known as 'the Hausmann'. He never used an endpin, but had great technical command and a tone which has been variously described as 'round', 'unusually powerful', or 'trombonelike'.

LYNDA MACGREGOR

**Hausmusik** (Ger.). Music intended for performance in the home by family and friends for their own entertainment and edification. Associated particularly with the music of the middle class as opposed to that of the aristocracy, the term is peculiar to Germany and retains a sociological significance not found in similar terms such as the English 'music at home' or 'household music'. Any suitable chamber music can be considered 'Hausmusik'.

Early uses of the term include Johann Staden's *Hauss-Musik* (Nuremberg, 1623–8), containing simple three-part settings of sacred songs with instrumental accompaniment, and Johann Rist's *Frommer und Gottseliger Christen alltäglichen Haussmusik* (Lüneburg, 1654). Although the 18th century brought a profusion of music composed for the dilettante and amateur musician, the term was not in common use again until the middle of the 19th century. W.H. Riehl included 'only simple, easy German Hausmusik' in his song collection *Hausmusik* (Stuttgart, 1855, 2/1860). This and later anthologies (e.g. Hugo Leichtentritt's *Deutsche Hausmusik aus vier Jahrhunderten*, Berlin, 1905–7; Hugo Riemann's *Hausmusik aus alter Zeit*, Leipzig, 1906) emphasized the gulf that had developed between art music, with its increasing harmonic and technical complexities, and music suitable for amateurs. The youth and singing movements in Germany in the early 20th century brought new political and social importance to *Hausmusik*. Music publishers, educators and musical instrument dealers collaborated in making music available for amateur performers, and composers such as Hindemith wrote music expressly for this purpose. Many publications devoted to *Hausmusik* enjoyed wide circulation, and since 1932 St Cecilia's Day has been celebrated as a 'day for *Hausmusik*' in most German cities.

**Haussermann, John (William)** (*b* Manila, Philippines, 21 Aug 1909; *d* Denver, CO, 5 May 1986). American composer. His father was the attorney general of the first American civil government in the Philippines and wrote the city charter for Manila before moving with his family to New Richmond, Ohio, in 1915. Afflicted with cerebral palsy from childhood, Haussermann studied music at the Cincinnati Conservatory (1924–7) and at Colorado College, before going to Paris in 1930 to study organ with Dupré. While in Paris he became friends with Ravel and began serious study of composition with Le Flem. In 1934 Haussermann moved to Cincinnati, where he founded a contemporary concert series. That year, Goossens led the Cincinnati SO in the first performance of the *Nocturne*; he subsequently performed many of Haussermann's orchestral works, including his best-known composition, the Voice Concerto (1942).

After moving to Briarcliff, New York, Haussermann had an organ built jointly by Aeolian-Skinner and Holtkamp, and loaned it to the 1939 New York World's Fair, for which he established an organ committee that sponsored recitals and compositions. He occasionally made public appearances as an organist, performing his own compositions and improvisations. In 1940 he was a founder of the American Colorlight Music Society, which promoted the theories of Skryabin and Lászlo. He dictated his compositions painstakingly by playing a single note at a piano which an assistant confirmed at a second instrument. Haussermann's works have a Chopinesque fluency and are rhythmically propulsive (though regular) and metrically fluid, with a French sensibility in their whole-tone harmonies. They are deft reminiscences of music of a bygone era, whose freshness and fluency belie the difficulty of their inception.

WORKS

Orch: Nocturne and Danse, op.8, 1933; After Christmas, suite, op.10, 1934; Sym. no.1, op.16, 1937–8; Rhapsodic Ov., op.17, pf, chbr orch, 1939–40; Sym. no.2, op.22, 1941; Voice Conc., op.25, 1942; Ronde carnavalesque, op.29 no.1, 1943; Ecologue romanesque, op.29 no.2, 1943; Sym. no.3, op.34, 1947; Stanza, op.37, vn, orch, 1949; Conc., op.48, org, str, 1985

SUSAN FEDER

**Hausskeller, Simon.** *See* CELLARIUS, SIMON.

**Häussler, Gustaw Adolf Paweł** (*b* Lübben, 15 Jan 1850; *d* Kraków, 19 May 1940). Polish violin maker. He settled in Kraków, where he soon became famous as a violin maker and repairer, succeeding his uncle, Christianie (1802–67), in the violin workshop. Barcewicz, Sarasate, Ševčik, Huberman and other leading violinists trusted him with their priceless instruments for repairs and adjustments. He still continued to make violins in the old Stradivari style. He received a bronze medal at the Kraków Exhibition (1887) for six such violins, and a gold medal at the National Exhibition in Lemberg [Lwów] (1894) for six others. As well, he imported instruments from the Kreuzinger factory in Kraslice, Bohemia, carefully corrected them, and labelled them 'Gustaw Häussler korygował' ('corrected by Gustaw Häussler'); these instruments were notable for their sound. He is also credited with the invention of special violin-making pliers.

JÓZEF POWROŹNIAK/JACEK PODBIELSKI

**Haussmann** [Haussman, Hausmannus, Husmannus, Husmanus], **Valentin** (*b* Gerbstedt, nr Eisleben, *c*1560; *d* probably Gerbstedt, *c*1611–13, before 11 Nov 1613). German composer, music editor, musician and poet. He usually styled himself 'Valentinus Haussmannus Gerbipolensis' or 'V.H.G.'. No documentation of his Gerbstedt period survives (much of the documentation concerning the town has been destroyed by fire), but his dedications provide a rich variety of biographical information. The descendant of immigrants from Nuremberg, he attended schools in Quedlinburg and Wernigerode (about 1570–80) and the Gymnasium Poeticum in Regensburg (about 1585–90, during the Kantorship of Andreas Raselius). After he finished his schooling he was tutor to a gentleman in Steyr, and it was during this time that his contacts with the Protestant Landesschule in Linz began. In the 1580s and 90s he was often in southern Germany. He made frequent trips to Nuremberg (in 1591, 1592, 1594 and 1597 at least), where his friend Paul Kauffmann published many of Haussmann's works. He was also in Regensburg, Steyr, Eger, Ulm and Tübingen and Strasbourg. Throughout his life, he maintained an address in Gerbstedt, where he was probably organist; Daniel Friderici studied with him there during the period 1595–8. But he continued to travel, both locally (Delitzsch, Magdeburg, Leipzig, Hanover, Wolfenbüttel and Dresden) and more widely: in the years 1598–9 he spent long periods in Prussia and northern Poland, and there is also evidence of journeys to northern Germany. He is not heard of after 1610. A *Mortuus Hausmannus viviet in aede poli* appeared in Johannes Jeep's *Studentengärtlein*

in 1614 (the foreword is dated 'St Martin's day, 1613', i.e. 11 November).

Most of Haussmann's compositions are secular, including German songs, dances, canzonettas and madrigals. His texted works were suited to performance with voices alone, instruments alone or the two combined. Haussmann is an important figure for the popularization of Italian secular vocal music in Germany: he published German contrafacts of works by Marenzio, Vecchi, Gastoldi and others and also composed works of his own in the Italian style. Of his church music, two eight-part masses, a magnificat, motets and sacred songs survive. He also composed a number of occasional works, including a *Threnodia* (1592), on the death of Ludwig Rabe, professor of theology at Ulm and Strasbourg. Haussmann's instrumental works include a variety of dance forms as well as works in free forms: fantasias, fugues and a set of variations on the passamezzo. During his trips to Prussia and Poland in 1598–9 he collected and edited Polish dances both with and without texts (*Venusgarten*, 1602, and *Rest von Polnischen und andern Täntzen*, 1603).

The popularity of Haussmann's secular music in his own lifetime is evident from the many reprints and transcriptions. In 1600, Johann Rude of Leipzig published eleven lute transcriptions of song settings from Haussmann's *Florum musicae*, Zachaeus Faber published secular contrafacts of songs from his *Schöne Geistliche Brautlieder* (1601), and his melodies were borrowed by Melchior Franck, Sweelinck and Scheidt.

WORKS

Edition: *Valentin Haussmann: Ausgewählte Instrumentalwerke*, ed. F. Boelsche, DDT, xvi (1904/*R*) [D]

*published in Nuremberg unless otherwise stated*

SECULAR VOCAL AND INSTRUMENTAL

Neue teutsche weltliche Lieder ... lieblich zu singen, und auff Instrumenten wol zu gebrauchen, 5–6vv (1592)

Eine fast liebliche art derer noch mehr teutschen weltlichen Lieder, 4–5vv (1594)

Neue teutsche weltliche Canzonette, lieblich zu singen, und auff Instrumenten zugebrauchen, 4vv (1596)

Neue teutsche weltliche Lieder, mit höfelichen kurtzweiligen Texten, lieblich zu singen, und auff Instrumenten zugebrauchen, 5–6vv (1597)

Andere noch mehr neue teutsche weltliche Lieder, nach art der Canzonetten, auff schöne lustige Text lieblich gesetzt (1597)

Neue liebliche Melodien, unter neue teutsche weltliche Texte, derer jeder einen besondern Namen anzeiget, dess mehrern theils zum Tantze zugebrauchen, 4vv (1598, 2/1600, 3/1602, 4/1604, 5/1606)

Neue artige und liebliche Täntze, zum theil mit Texten, dass man kan mit menschlicher Stimme zu Instrumenten singen, zum Theil ohne Text gesetzt, 4vv (1598, 2/1599, 3/1600, 4/1602, 5/1604, 6/1606); 10 ed. in D

Fragmenta, oder 35 noch übrige neue weltliche teutsche Lieder, 4–5vv (1602)

Venusgarten, darinnen 100 ausserlesene gantz liebliche, mehrerntheils polnische Täntze, unter welche ersten 50 feine höfliche amorosische Texte, von ihme Haussmann gemacht und untergelegt seind, 4/5vv (1602); 8 ed. in D [1 sacred Ger. in contrafact, 1610[12]]

Fasciculus neuer Hochzeit und Braut Lieder, 4–6vv (1602)

Extract auss ... fünff Theilen der teutschen weltlichen Lieder ... mit lustigen kurtzen lateinischen lemmatibus gezieret: der erste Theil, 5vv (1603, 2/1611) [incl. some previously pubd wks]

Der ander Theil dess Extracts auss ... fünff Theilen der teutschen weltlichen Lieder ... diser Theil, 4vv (1603, 2/1611) [incl. some previously pubd wks]

Rest von polnischen und andern Täntzen, nach art, wie im Venusgarten zu finden, colligirt, und zum Theil gemacht, auch mit weltlichen amorosischen Texten unterlegt, 5vv (1603[14]); 15 ed. in D; 8 ed. in The Renaissance Band, vi (1978)

Neue Intrade ... fürnemlich auff Fiolen lieblich zugebrauchen: nach disen sind etliche englische Paduan und Galliarde anderer Composition zu finden, 5–6vv (1604); 7 ed. in D; 5 ed. in Thesaurus Musicus, lxii (1986)

Neue Paduane und Galliarde ... fürnemlich auff Fiolen lieblich zugebrauchen, 5–6vv (1604); 6 pavan/galliard pairs, 2 fugues, ed. in D, 2 ed. in GMB

Musicalische teutsche weltliche Gesänge, nach art der italianischen Canzonen unnd Madrigalien, 4–8vv (1608)

Melodien unter weltliche Texte, da jeder einen besondern Namen anzeiget, umb ein guten Theil vermehret, von neuem auffgelegt, 5vv (1608) [incl. works from Neue liebliche Melodien, 1598, and Venusgarten, 1602]

Ausszug auss ... zweyen unterschiedlichen Wercken ... mit und ohne Text, 4–5vv (1608–9) [incl. works from earlier pubns]

5 tricinia, 1607[25]; canzonetta, 4vv, 1610[19] Ger. song, 5vv, *Liebliche Frohliche Ballette* (see editions below)

12,000 mägdelein, 4vv, *D-Rp*

SACRED VOCAL

Psalmus XLVI (Omnes gentes), 5vv (Königsberg, 1588, probably 1598)

Manipulus sacrarum cantionum, 5–6vv (1602)

Man wird zu Zion sagen, 8vv, 1603[1], 1618[1]

Ad imitationem cantionis italicae Fuggi pur se sai &c. missam, 8vv ... cum duabus moctetis, 10, 14vv (1604)

Adoramus te, O Christe, 5vv, Munich, 1609[14]

All Treu und Lieb verkehret sich, 4vv, 1622[15]

Ergo tuus natalis adest, 10vv, *D-Bsb*

Es weinet Zion, 4vv, *Rp*

Magnificat, 8vv (autograph, 1591), *Rp*

Quaerite primum regnum Dei, 5vv, *H-Bn*

Haurietis aquas, transcr. for org, 8vv, *PL-Wn*

Jubilate Deo omnis terra, transcr. for org, 5vv (1591), *D-Rp*

Cum autem venerit filius hominis, transcr. for org, 6vv (*c*1580); lost, formerly Stadtbibliothek, Breslau [now Wrocław]

Missa super Dum petit armigeros, 8vv; lost, formerly Stadtbibliothek, Breslau [now Wrocław]

Choral im Glauben des Herrn Lutherj, 6vv [for the Mayor of the city Frankfurt am Main, 1604]; lost

Gib fridt zu unser Zeit, 5, 6, 8vv [for the Council of the city, Linz, 1608]; lost

Pater noster, 6vv [for the Council of the city, Hanover, 1597]; lost

OCCASIONAL

Threnodia (Justorum animae) in obitum reverendi et clarissimi viri D. Ludovici Rabus, 6vv (Tübingen, 1593)

Epithalamium (Quis plausus; Ergo diu vivat) nuptiis ... Joannis Keckii ... cum ... Sabina de Holtzhausen, 6vv (Magdeburg, 1597)

Ode sapphica adversus turcae ... immanitatem (Heu dolor; Dextra si serust tua nos), 6vv (Magdeburg, 1597)

Teutsche Villanel aus dem 10 cap: der Sprüche Salomonis (Zunicht wird hie des Menschen Raht) Auff den Nahmen ... Zacharias Kreelen, 5vv (Königsberg, 1598, 2/1646)

Harmonia melica (Tempus adest) nuptiis Georgii Reimanni ... et Catharinae ... Ketneri, 5vv (Königsberg, 1598)

Hochzeit Lied (Darnach hab ich gerungen) Zu Hochzeitlichen Ehren Dem David Schitzing, 5vv (Königsberg, 1598); lost, formerly Staats- und Universitätsbibliothek, Königsberg [now Kaliningrad]

Zwei Brautlieder zu Ehren des herrn Lucas Levit, 5vv (Königsberg, 1598); lost, formerly Stadtbibliothek, Elbing [now Elblag]

Harmonia melica pro felicissimi novi anni ... viris (Königsberg, 1599); lost, formerly Stadtbibliothek, Elbing [now Elblag]

Mariaeburgo civitati in Borussia (Urbs Mariaeburgum fortissima), 5vv (Königsberg 1599); lost, formerly Staats- und Universitätsbibliothek, Königsberg [now Kaliningrad]

Villanellae nuptiales duae (Lob ehr und preis; Mein Schatz, was b'deut die frewde) Zu Hochzeitlichen Ehren ... Laurentio Schmit ... und ... Mariae Gedickens, 4vv (Frankfurt an der Oder, n.d., *c*1600)

Hochzeit Gesang zu Hochzeitl. Ehren gestellet Herr Christoph Stissern, ?8vv (Leipzig, 1606); lost, mentioned in *Göhler*

Epigramma musicum (Magnatum decus) altissimo Principi ac Domino ... Joan: Georgio Marchioni Brandenburgensi, 6vv (autograph, 1595), *F-Sschlaefli*

In natalem ornatissimi & praestatissimi viri Domini Joannis Hartmanni (Gratia Musarum tibi nomen), 5vv (autograph, 1601), *Flensburg Landeszentralbibliothek Schleswig-Holstein*

Ein Musicalisch Gesang (Man saget war) Dem ... Johan Beuchter ... Zu Ehren, 5vv (autograph, 1605), *F-Sm*
Psalmus CXXVII (Beati omnes) Honori nuptiarum ... Nicolai Ferberi ... et ... Magdalenae Beichterinae, 8vv (autograph, 1605), *Sm*
Erhalt uns, Herr, 8vv [for the Council of the city, Eger, 1592]; lost
Symphonia advers. Türcam, 4vv [for the Council of the city, Delitzsch, 1595]; lost

EDITIONS

Auszugauss L. Marentii 4 Theilen seiner italianischen Villanellen und Neapolitanen, mit teutschen Texten gezieret, 3vv (1606)
Canzonette Horatii Vecchi unnd Gemignani Capi Lupi ... mit teutschen Texten beleget, 3vv (1606[13])
Johann-Jacobi Gastoldi und anderer Autorn Tricinia ... mit teutschen weltlichen Texten, 3vv (1607[25]) (incl. 5 works by Haussmann)
Liebliche fröliche Ballette welche zuvor von T. Morlei unter italianische Texte gesetzt ... mit unterlegung teutscher Texte, 5vv (1609) (incl. 1 work by Haussmann)
Die erste Class der Canzonetten Horatii Vecchi ... mit Unterlegung teutscher Texte, 4vv (1610[19]) (incl. 1 work by Haussmann)
Die ander Class der Canzonetten Horatii Vecchi ... mit Unterlegung teutscher Texte, 4vv (1610)
Die dritte Class der Canzonetten Horatii Vecchi ... mit Unterlegung teutscher Texte, 4vv (1610)

MARTIN RUHNKE/KLAUS-PETER KOCH

**Hausswald, Günter** (*b* Rochlitz an der Mülde, 11 March 1908; *d* Stuttgart, 23 April 1974). German musicologist. In Leipzig he studied the piano with Max Pauer, composition with Karg-Elert and theory with Hermann Grabner at the Musikhochschule (1928–30), and musicology with Kroyer, Zenk and Schultz and music psychology with Krueger at the university (1928–33); he took the doctorate there in 1937 with a dissertation on the instrumental works of J.D. Heinichen, and completed the *Habilitation* at the Dresden Technical College in 1949 with a study of Mozart's serenades. After working as a schoolteacher (1933–45) and as a music critic in Dresden he became Dramaturg of the Dresden Staatsoper (1947–53), lecturer in music history at the Dresden Musikhochschule and lecturer in musicology at the University of Jena (1950–53). Subsequently he worked for Bärenreiter in Kassel (1956–9), edited the monthly *Musica* (1958–70) and directed programme planning for South German Radio in Stuttgart (1960–68). He collaborated on the complete editions of Bach, Gluck, Mozart and Telemann and published many performing editions of instrumental works by Binder, Danzi, Fasch, Heinichen, Pepusch, Pisendel, Stölzel and Vivaldi. He also wrote several studies of individual composers and of opera in Germany.

**Hauta-Aho, Teppo** (*b* Janakkala, nr Hämeenlinna, 27 May 1941). Finnish composer and double bass player. He studied the double bass with Oiva Nummelin and in Prague with František Pošta. From 1965 to 1972 he played the double bass in the Helsinki PO and from 1975 in the Finnish National Opera orchestra. He has also performed as a soloist and as a chamber musician, and has played jazz.

As a composer Hauta-Aho is self-taught. Essentially his style is freely tonal, but sometimes, as in his double bass concerto *Hippovariaatioita putkessa ja ilman* ('Hippo-Variations Within a Tube Without', 1983, revised 1985), he has exploited various historical styles. Sometimes again he has broadened his expression into modernist elements, as in perhaps his best-known work, the Fantasy for trumpet and orchestra (1986), which won the Queen Maria José composition award in Geneva. Hauta-Aho has composed a good deal of music for the double bass and an extensive amount of chamber music. In addition he has written music of pedagogical use for young players.

KIMMO KORHONEN

**Hautbois** (i) (Fr.). Oboe. *See* OBOE, §II.

**Hautbois** (ii) (Fr.). *See under* ORGAN STOP.

**Hautbois baryton** (Fr.: 'baritone oboe'). *See* OBOE, §III, 5(i).

**Hautbois d'amour** (Fr.). Oboe d'amore. *See* OBOE, §III, 3(ii).

**Hautbois d'église.** A group of conical-bore double-reed aerophones of the SHAWM type, unique to the Protestant region of western Switzerland, and in use between about 1750 and 1810. The group is formed of three members (see illustration): a treble, the *dessus de musette*, often referred to simply as 'hautbois'; a tenor, the *basse de musette* (Ger. *Musettenbass*; the French term was coined by Gustave Chouquet in his 1884 catalogue of the Paris Conservatoire collection); and a bass, known as the *basson d'amour*, a term coined by the anonymous author (?F.W. Galpin) of the *Catalogue of the Crosby Brown Collection*, vol.i (New York: Metropolitan Museum of Art, 1904), p.148, no.883, due to the instrument's spherical brass bell, analogous to that of the oboe d'amore and other period woodwind instruments.

Documented original extant specimens include 28 tenors and 14 basses, but only five trebles, indicating that the latter were the least frequently used. The *dessus* and *basses de musette* have a wide, sharply conical bore and thin walls, usually of maple. None of the six tone holes is doubled and all are of large diameter. Both types are built in three sections and terminate in a wide flaring bell. On all three instruments the lowest hole has a brass key which bears the maker's mark, and the reed fits into a pirouette. The *dessus de musette* are pitched in C and are about 61 cm in length, similar to an oboe pitched in Cammerton. The *basses* are pitched an octave below the *dessus*, and have a long, coiled, brass crook equipped with a pirouette. They measure about 81 cm, with another 45 cm in the crook. Brass keys cover the first, third, fourth and sixth holes. The resulting tone is powerful, but not strident. The *bassons d'amour* are about 116 cm in length including the bell, are in F, and some examples have two thumb-keys in addition to the low-F key.

Although several makers are represented among the extant instruments (approximately 35 have been identified), the majority were made by a single maker with the mark 'I.IR'. Chouquet's identification of this as J.-J. Riedlocker is now known to be false, and Staehelin has shown that this was Jean (or Jacques) Jeanneret (*fl* 1864–86) of La Chaux du Milieu, near Neuchâtel.

The church ensemble, which at its fullest consisted of two trebles, a tenor and a bass, was employed only in the accompaniment of psalms, primarily in the smaller parishes of German-speaking Protestant Switzerland, where wind instruments had recently been readmitted to the service (and were eventually replaced by organs). Textless part-books containing music for psalms survive in several locations, the title page of one example dated 1781, at Gurzelen, referring to the 'Neue Hobua u[nd] Facot Music'. Often only the tenor and bass part-books are present, the lack of treble parts reflecting the proportion of surviving instruments, and indicating that the *basse de musette* and *basson d'amour* were used for instrumental support rather than playing the familiar melody lines.

*Three members of the hautbois d'église family: (a) dessus de musette; (b) basse de musette by Jean (or Jacques) Jeanneret, c1765; (c) basson d'amour by Jeanneret, c1765 (all Historisches Museum, Basle)*

A possible French origin is suggested by the similarity, primarily in the keywork, of the *basse de musette* to an instrument depicted in the frontispiece of Pierre Borjon de Scellery's *Traité de la musette* (Lyons, 1672; *see* OBOE, fig.3), but also found in contemporary large oboe types.

MICHAEL FINKELMAN

**Hautbois de Poitou** (Fr.: 'Poitou oboe'). A straight wind-cap shawm (oboe family; *see* WIND-CAP INSTRUMENTS). It was described by Mersenne (1636–7), who illustrated three sizes and stated that 'the range of each of these *hautbois* is similar to that of the shawms', instruments with a range of almost two octaves. Wind-cap instruments do not normally overblow, being restricted to a range of about a 9th. The three sizes illustrated by Mersenne apparently had as their lowest notes *d′* (or *c′*), *f* and *F* (or *E*); the bass had a bore which doubled back on itself like a bassoon. These three instruments and a small bagpipe with one drone called a 'cornemuse' (not to be confused with the wind-cap CORNAMUSA (i)), which doubled the descant *hautbois de Poitou*, formed a regular consort in the *grande écurie* of the kings of France until well into the 17th century. Indeed this consort survived at least in name throughout the *ancien régime*, though it probably no longer functioned as a musical unit in the 18th century. In both *Harmonicorum instrumentorum* and *Harmonie universelle* Mersenne included a composition for this combination of instruments by Henry le Jeune, one of the French royal composers. The *hautbois de Poitou* survived in France as a folk instrument into the 19th century.

HOWARD MAYER BROWN/BARRA R. BOYDELL

**Hautbois pastoral** (Fr.). A small oboe with a penetrating tone. *See* OBOE, §III, 6.

**Hautboist (i)** (Fr. *hautboïste*). Oboist. The term was also used for a player of a double-reed instrument, either the SHAWM or the oboe (*see* OBOE, §II), who may sometimes also have played other instruments.

**Hautboist (ii)** (Ger., pl. *Hautboisten*). *Hautboisten* formed an ensemble of instruments for festive, hunting and military music (sometimes called an *Hautboisten-Chor*). Before the introduction of the oboe (hautboy) in the mid-17th century, the ensemble included shawms; such ensembles, often consisting of two treble instruments, a tenor and a bass, continued in use into the 18th century. In the late 17th century and the early 18th a common formation was two or three oboes, two tenor oboes and two bassoons; by the 1720s horns had replaced the tenor oboes in many places. Other instruments, such as the trumpet, and, from the middle of the 18th century, the clarinet, were also used. By the early 19th century the term had come to mean 'military band', and an *Hautboist* could be a player of any wind instrument.

See also BAND (i), FELDMUSIK and HARMONIEMUSIK.

□

**Hautboy (i).** An oboe. The term 'hautboy' is sometimes used to designate the instrument with two or three keys, in use from the mid-17th century to the beginning of the 19th; *see* OBOE, §II.

The term has also been used for a double-reed instrument or a player (also called 'hautboist') of such an instrument, sometimes used for all members of an ensemble of wind instrument players, who often also played other instruments. Before the appearance of the oboe (hautboy) in the mid-17th century, it was often used for the SHAWM, or for a shawm player. Shakespeare, for example, directed in *Antony and Cleopatra* (Act 4 scene iii) that 'Music of the hautboys' sound from below the stage.

**Hautboy (ii).** *See under* ORGAN STOP.

**Hautcousteaux, Arthur.** *See* AUX-COUSTEAUX, ARTUS.

**Haut-dessus** (Fr.: 'high treble'). The uppermost part in a vocal or instrumental ensemble. The term is mostly used where there is a divided treble, the second part being called the BAS-DESSUS.

**Haute** [Hawte], Sir **William** (*b c*1430; *d* 2 July 1497). English composer. He was a member of a prominent Kentish family and a first cousin, on his mother's side, of Elizabeth Woodville, the queen of Edward IV. From the time of her marriage, Haute's career in public life closely paralleled the successes and reverses of the Woodville family. He was knighted during the festivities for the queen's coronation in May 1465, and received a steady flow of royal commissions (such as his two appointments as Sheriff of Kent) throughout the reign of Edward IV. After the accession of Richard III in 1483, Haute joined the Duke of Buckingham's rebellion, and when it failed he was named among the 'rebels and traitors' for whose capture Richard offered '300 marks ... and great thank of the king's grace'. After the marriage of Henry VII to Elizabeth of York (Elizabeth Woodeville's eldest daughter), Haute again received royal commissions until his death, although on a more limited scale. His son William (*b* before 1462; knighted 1492; *d* probably before 1497) was also musical; a third Sir William, perhaps a grandson, died in 1539.

Three compositions attributed to Haute survive: two *Benedicamus Domino* settings for two and three voices in *GB-Cmc* Pepys 1236 (ed. in CMM, xl, 1967) and a three-voice *Stella celi extirpavit* in the Ritson MS (*GB-Lbl* Add.5665). These are the work of a competent and original composer, with a marked interest in imitative techniques.

SYDNEY ROBINSON CHARLES

**Haute-contre** (Fr.). A high tenor voice, cultivated in France until about the end of the 18th century. Rousseau defines *haute-contre* as the shrillest ('les plus aiguës') and highest ('les plus hautes') of the male voices, in opposition to the BASSE-CONTRE, the lowest and deepest. Although the term is always translated in English Baroque treatises and dictionaries as COUNTERTENOR (for example Cotgrave, 1611; Pepusch, 1724; Bailey, 1726; Prelleur, 1731; Rousseau/Waring, 1779), Rousseau (1768) gives 'altus' as a synonym and equates the voice with the Italian CONTRALTO, which he says is 'nearly always sung by the *bas-dessus* [or second soprano], be they women or castratos': that is, the *haute-contre* is a male voice equivalent in range to the contralto or second soprano parts sung by women or castratos. Although the relation of the terms *haute-contre* and countertenor seems therefore natural, given that both are male voices in the same

register, this association has led to the mistaken understanding that the *haute-contre* was a falsettist. Joseph de Lalande (*Voyage en Italie*, 2/1786) makes it clear this was not the case. He writes that 'the tenor goes from C to *g′* in full voice and to *d″* in falsetto or *fausset*: our *haute-contre*, ordinarily, after *g′* goes up in full voice to *b♭′*; while the tenor after *g′* goes up into falsetto'. Above this pitch, however, the *haute-contre* singers must 'force their natural means by contracting their throats; but in this manner they lose in charm what they gain in range' (N.E. Framery, *Encyclopédie méthodique: Musique*, i, 1791).

The *haute-contre* was primarily a soloist. Lully assigned the principal male role in eight of his 14 operas to this voice. Among the finest of *haute-contre* singers was Pierre de Jélyotte (1713–97), for whom Rameau wrote most of his principal *haute-contre* title roles. By the beginning of the 19th century, the *haute-contre* was largely replaced by the more powerful natural tenor. The voice always had its detractors. Rousseau wrote that 'the *haute-contre* is not natural in a man's voice; one must force it to carry it to this pitch: whatever one may do, it always has some harshness and is rarely in tune'.

The term *haute-contre* was also used at times as a synonym for *haute-taille* in French choral music. For example, Lalande labels the parts in his *grands motets* (from top to bottom): *dessus*, *haute-contre* (or *haute-taille*), *taille*, *basse-taille* and *basse-contre*. The *haute-taille* and *haute-contre* are also conflated in Rousseau (explicitly in the English translation of William Waring, 1779). Similarly, *haute-contre* is sometimes used, instead of *haute-taille*, to identify the highest of the three *parties intermédaires* of the string orchestra played by the violas. The term was also used, confusingly, to refer to the second part of any instrumental group, such as *haute-contre de hautbois* (second oboe) or *haute-contre de violon* (second violin). *See also* ALTO (i).

**Hautman, Nicolas.** *See* HOTMAN, NICOLAS.

**Hauville, Antoine de** (*fl c*1553–*c*1572). French composer. In 1560 he published ten sacred chansons under the title *La lyre chrestienne avec la monomachie de David & Goliath, & plusieurs autres chansons spirituelles* (Lyons, 1560). Six of the texts were by Guillaume Guéroult, who also wrote the dedicatory epistle to Marguerite of Savoy, explaining that the new collection was prompted by the success of his *Susanne un jour*. Two duet settings of graces by Clément Marot attributed to 'A. Hauville' were published in Richard Crassot's collection of four-voice psalms (Lyons, 1564), and two secular chansons for four and five voices are attributed simply to 'Hauville' in anthologies published at Paris (RISM 1553[20] and 1572[2], the latter ed. in SCC, x, 1994). He may also be identifiable with or related to the 'Adriano Hauville' or 'Hawil' who published two five-voice madrigals in a Venetian collection (1570[15]) and a four-voice mass in a Milanese print (1588[4]).

FRANK DOBBINS

**Havana** (Sp. La Habana). Capital of Cuba. Although founded on its present strategic site about 1519 and a key port for the defence of the Spanish Indies throughout the colonial period, Havana became the official capital only in 1607. It was already a city of 50,000 inhabitants when the diocese of Havana was created in 1787. Until then it lacked the kind of cathedral music establishment that gave Mexico City, Lima and La Plata (Sucre) their colonial fame. The first Havana musicians were adventurers; for instance: the Flemish drummer Juan de Emberas ('of Antwerp') who was being paid 36 ducats annually in 1557; the fife-and-drum players, three trumpeters, harpist, and players of viol and psaltery who left Havana on 10 February 1566 for Florida in Menéndez de Avilés's ships. The music played in churches and at Corpus Christi celebrations is documented from the end of the 16th century, as is the establishment of councils and brotherhoods where the African population and their creole descendants met and where music and dance were cultivated. The celebration of Epiphany, with its parades by the guilds of the 'Nation's Negroes', provided one of the city's most typical scenes and gave rise to the Havana Carnival.

In 1605 Gonzalo de Silva became the city's first known music teacher, giving lessons in organ and singing, and in 1689 the first boys' choir was formed at the San Ambrosio school. The founding of several institutions in the 17th century, together with the economic development of Cuba's western region, stimulated the growth of cultural activity in the capital. The Real y Pontificia Universidad de La Habana, founded in 1728, was crucial in the development of Cuban intellectual life.

The most important ecclesiastical composer born in Havana before 1800 was Esteban Salas y Castro (1725–1803). His extant copies of works by Juan del Vado, Sebastián Durón, Juan Francisco Barrios and Melchor de Montemayor attest his acquaintance with Baroque literature of the peninsula. In 1796 Francisco Manuel Lazo de la Vega became *maestro de capilla* of Havana Cathedral. By 1850 a cathedral music archive of 623 works was amassed, including nine Haydn symphonies, many European sacred works, scores by Lazo de la Vega and by his successors Juan Nepomuceno Goetz, José Francisco Rensoli, Joaquín Gavira, and by the Havana Cathedral veteran Cayetano Pagueras.

On 12 October 1776 the first Havana playhouse, the Teatro Coliseo (renamed the Principal in 1803), opened with a Metastasio opera, *Didone abbandonata* (composer not known). On 24 October 1790 the first Spanish *tonadilla*, Pablo Esteve y Grimau's *El catalán y la buñuelera*, was sung in Havana; between then and 1832, 200 more *tonadillas* were staged, the most popular of which was Blas de Laserna's *Isabela*. After the *tonadilla* lost favour, the *guaracha*, sung with gourds, rattles, guitars and accordion, took its place. In October 1800 Iriarte's melodrama *Guzmán el Bueno* was mounted in

the Coliseo. On 25 January 1801 the Teatro del Circo opened with Grétry's *Zémire et Azor*, followed by his *Le tableau parlant*, J.-F. Edelmann's *Ariane dans l'isle de Naxos*, Gibert's *Les trois sultanes* and Monsigny's *Le déserteur*. The social dances then in favour in Havana were the minuet and *contradanza*. From 1811 to 1832 a local company gave 80 opera productions annually, including works of Paisiello, Cimarosa, Spontini and Rossini. Mozart's *Don Giovanni* received its New World première at the Havana Teatro Principal on 3 November 1818, when the 18-piece orchestra was conducted by the local black *maestro* Ulpiano Estrada.

The first Cuban music periodical, published in Havana in 1812, was *El Filarmónico Mensual*. Music publishing was initiated in 1822 by a Frenchman, Santiago Lessieur. In 1832 the younger J.-F. Edelmann settled in Havana and founded in 1836 a music publishing house that issued *morceaux caractéristiques* by him and his Havana-born pupils Manuel Saumell Robredo (1817–70), Pablo Desvernine (1823–1910) and Fernando Arizti (1828–88). Around the mid-19th century numerous societies were founded, including the Liceo Artístico y Literario (1844–79), the Sociedad de Música Clásica (1866) and the Sociedad Filarmónica, which promoted solo and chamber concerts. While in Paris, Sebastián Iradier (1809–69) published the most successful habanera of the century, *La paloma: canción americana* (1859); it was approached in popularity only by his *El arreglito* (1864), quoted by Bizet. However, in the 1850s the *zapateo* and *contradanza* still remained the most popular society dances in Havana. Local musicians of African descent, such as Tomás Buelta y Flores (*d* 1844), excelled in *contradanzas*. The first artist to incorporate Cuban black drummers in a public concert in Havana was L.M. Gottschalk, who aroused frenzied enthusiasm when he played there in 1854, 1857 and 1859. His Havana friend Nicolás Ruiz Espadero (1832–90) became the most widely known Cuban composer of his generation through his miniatures published in Paris. At the close of the century the unrivalled master of the *danza*, Ignacio Cervantes Kawanag (1847–1905), headed a roster of Havana-born celebrities that included Claudio Brindis de Salas (1852–1911), Rafael Díaz Albertini (1857–1928), Cristóbal Martínez Corres (1822–72) and Gaspar Villate (1851–91). Villate was the first Havana-born composer to have an opera performed there (*Zilia*, 29 January 1881).

The Teatro de Tacón was inaugurated on 28 February 1838, and gave its first opera, *Norma*, the following year. *Ernani*, which opened the seasons of 1846–8, introduced Verdi to Cuban audiences. The first Spanish zarzuela to be sung there was Hernando's *El duende* on 4 January 1853. On 31 January 1901 *El náufrago* received its première at the Tacón, with both music and a libretto based on Tennyson's *Enoch Arden* by Eduardo Sánchez de Fuentes (1874–1944), who composed five other operas produced in Havana. Lacking Cuban indigenous melodies on which to base a symphonic work, Sánchez de Fuentes incorporated a Haitian melody in his grandiose *Anacaona* for chorus, orchestra and piano (1928). The first 20th-century Cuban symphonist to avail himself of African themes was Amadeo Roldán (1900–39); the other founder of Afro-Cuban musical nationalism was Alejandro García Caturla. Both profited from the ethnomusicological researches of the Havana-born anthropologist Fernando Ortíz. Gonzalo Roig (1890–1970), Ernesto Lecuona (1895–1965) and César Pérez Sentenat (1896–1973) reorganized the Havana SO in 1922.

In 1924 the Spanish musician Pedro Sanjuán (1886–1976) founded the Havana PO, which was directed by Roldán from 1930 until his death in 1939. Established in 1918, for more than half a century the Sociedad Pro-Arte Musical was the foremost promoter of concerts in the country, bringing to the stage of the Teatro Auditorium (later renamed the Teatro Amadeo Roldán) internationally renowned soloists such as Menuhin, Heifetz, Rubinstein and Casals. Alongside the orchestras and other institutions dedicated to promoting concert music, the Sociedad Coral de La Habana (Havana Choral Society) was also prominent. Directed by María Muñoz de Quevedo, it was responsible for the premières of many choral works, especially in the 1930s. Havana remained on the touring itinerary of various opera, ballet and zarzuela companies, and musicians such as Erich Kleiber, Juan José Castro, Koussevitzky, Monteux, Ansermet and Stravinsky (conducting mainly his own works) were invited to conduct the Havana PO. In 1934 José Ardévol founded the Havana Chamber Orchestra (Orquesta de Cámara de La Habana), which for over 20 years performed music by native composers, the Baroque and Classical repertory and, above all, numerous 20th-century works.

After numerous attempts, the first systematically organized conservatory was founded in Havana in 1885 by Hubert de Blanck. In 1899 Carlos Alfredo Peyrellade founded a rival Conservatorio de Música y Declamación, thus initiating a prolonged 'war of conservatories' that ended only in 1935 with the reform of the so-called Conservatorio Municipal. The Conservatorio Municipal de La Habana was founded in 1903 by Guillermo M. Tomás (1868–1933), and until 1959 it was the only free music school. In the 1940s it saw the founding of the Grupo de Renovación Musical, directed by Ardévol; the birth of the specialist magazines *Conservatorio* and *La Música*; and the emergence of the Sociedad Cultural Nuestra Tiempo (1951–61), under the presidency of Harold Gramatges, whose objective was to disseminate the newest trends in contemporary culture.

After 1959 free instruction in music was extended to several institutions, not only in the capital, but throughout the country. The Escuela Nacional de Arte, which became the centre for music and the other arts, was founded in Havana in 1962, and professional training continued at the Conservatorio Municipal (later renamed the Conservatorio Amadeo Roldán). The musical vanguard gathered strength in the 1960s, led by the composers Leo Brouwer, Juan Blanco and Carlos Fariñas and the conductor Duchesne Cuzán. Works by both Cuban and foreign composers were performed which incorporated such compositional devices as serialism, aleatory techniques and electro-acoustics. Three important institutions were founded in Havana in the 1970s and 80s: the Instituto Superior de Arte (1976), whose music faculty offers courses in practical music-making, musicology and composition; the Estudio Electroacústico (1977) at the Instituto Cubano de Amistad con los Pueblos, directed by Juan Blanco, which in 1990 became the Laboratorio Nacional de Música Electroacústica; and the Estudio de Música Electroacústica y por Computadoras, created at

the Instituto Superior de Arte in 1989 and directed by Carlos Fariñas.

Havana is the home of most of Cuba's performing institutions, notably the National SO (founded in 1960), the Coro Nacional (1960), the main dance companies – Cuban National Ballet, Danza Contemporánea and Conjunto Folklórico Nacional – and the national opera company, the Teatro Nacional Lírico. The city also contains several institutions devoted to musical heritage and research, such as the Museo Nacional de la Música, the Centro de Información y Documentación Musical Odilio Urfé and the Centro de Investigación y Desarrollo de la Música Cubana. Similarly, the majority of Cuba's competitions and festivals linked to both popular and serious music are held in Havana. Among the longest-established festivals are the Festival de Guitarra, directed by Leo Brouwer; the Festival de Música Contemporánea, sponsored by the Musicians' Association of the Cuban Writers' and Artists' Union; and the Festival de Jazz, organized by the Instituto Cubano de la Música.

ROBERT STEVENSON/VICTORIA ELI RODRÍGUEZ

**Havas, Kato** (*b* Kezdivásárhely, 5 Nov 1920). British violinist and teacher of Hungarian birth. She studied with Imre Waldbauer, Antal Molnar and Kodály at the Franz Liszt Academy of Music, Budapest, and made her début recital at Carnegie Hall, New York, in 1939, followed by concert tours and broadcasts throughout the USA. During this time she began to develop a new method of violin teaching which focussed on the problems of mental stress and physical tension; through her teaching and writings this 'New Approach' brought her an international reputation. She founded and directed the International Summer School and Purbeck Festival of Music (1966–79) and the International Music Festival of Oxford and Summer School for Strings (1980–90). Havas played a violin by Zanoli dated 1723.

MARGARET CAMPBELL

**Havelka, Svatopluk** (*b* Vrbice, 2 May 1925). Czech composer. He studied musicology and music education at Prague University (1945–9) and composition privately with Jirák (1945–7). After posts with Czech Radio and in the army, he began working as a freelance composer in 1954. In 1990 he was appointed professor of composition at the Prague Academy of Musical Arts. His style was initially influenced by the folk music of his native Moravia; subsequently he has used more complex structures, especially in large-scale orchestral and choral works from the 1960s and 70s. Since the late 1970s his compositions have been strongly influenced by his Christian faith, inspired by biblical subjects, and he has composed religiously inspired chamber works as well as monumental choral-orchestral pieces. Havelka is a prolific composer of film music, writing scores for over 200 films including several of the Czech 'New Wave' in the 1960s. He has received many Czech music awards, including two State Prizes.

MILAN SLAVICKÝ

**Havergal, William Henry** (*b* High Wycombe, Bucks., 18 Jan 1793; *d* Leamington, Warwicks., 19 April 1870). English composer. He was educated at Merchant Taylors' School, London, and St Edmund Hall, Oxford (BA, 1815; MA, 1819). He was ordained in 1816, and was a curate successively at Bristol, Coaley (Gloucs.) (1820), and Astley (Worcs.) (1822). He became rector of Astley in 1829, rector of St Nicholas, Worcester, in 1845 and soon after an honorary canon of Worcester Cathedral. In 1860 he retired to the country vicarage of Shareshill (Staffs.); from 1867 to his death he lived at Leamington. As a result of an accident in 1829 he suffered from impaired vision and other disabilities. He was twice married, and several of his children were writers; one, Frances Ridley Havergal (1836–79), became well known for her religious poetry, and edited her father's psalms and chants after his death. His eldest son, Henry E. Havergal (1820–75), was also a clergyman and a composer of hymn tunes and chants.

Havergal began to publish cathedral music in the 1830s; his Evening Service in A won him the Gresham Prize Medal in 1837. In 1844 he began to produce a series of publications aimed towards the improvement of psalmody. In these works Havergal drew attention to the classical school of English parish-church music, and also brought a number of German chorales into English use. His lead was soon followed by others, and it represents his main contribution to musical history. It provided a strong foundation for the development of the Victorian hymn tune, avoiding both the vulgarity found in many commercial hymnbooks and the extreme austerity of the Gregorian movement. His most popular tune is 'Consecration' (1869).

He wrote a number of songs and rounds for the young, as well as many hymns, sacred songs and carols for the periodical *Our Own Fireside*. He also selected, harmonized and arranged much vocal music. He published two volumes of *Sermons* (London, 1853) and *A History of the Old Hundredth Psalm Tune* (New York, 1854) as well as many other sermons and religious essays.

WORKS

*all published in London*

A Collection of Original Airs and Harmonized Tunes Adapted to Hymns of Various Measures, op.2 (1826)
An Evening Service and 100 Antiphonal Chants, op.35 (1836)
An Evening Service, Magnificat and Nunc Dimittis, op.37 (1837)
Give Thanks, anthem (1841)
ed.: *A Reprint of all the Tunes in Ravenscroft's Book with Introductory Remarks* (1845)
Old Church Psalmody, op.43 (1847)
100 Psalm and Hymn Tunes, op.48 (1859)

WILLIAM BARCLAY SQUIRE/NICHOLAS TEMPERLEY

**Havericq** [Haverick, Hauricq, Hauricqz, Haurkus], **Damien** [Damianus] (*fl* 1538–56). Netherlandish composer. His surviving works appear primarily in the musical anthologies of Antwerp publishers. In his use of a pervading imitative texture, overlapping phrases, long asymmetrical melodies and constant reworking of motivic material, his music reflects the Netherlandish style of the mid-16th century. In spite of a tendency to avoid literal repetition in his chansons, the six-voice *Si mon traveil* begins with a reiteration of the initial phrase. He probably used Sandrin's four-voice chanson on the same text as a model; the opening motifs are strikingly similar, and the form and modes of both settings are the same.

WORKS

Motets: Dum praeliaretur Michael, 4vv, 1556[4]; Gaudent in coelis animae sanctorum, 5vv, 1557[3]; Impetum inimicorum, 4vv, 1556[5]; Laetare Anna sterilis, 5vv, 1556[6]
Chansons: A tout jamais, 4vv, 1556[17]; Ayez pite de vostre amant, 4vv, 1545[16]; C'est grand plaisir, 6vv, *GB-Lbl* Roy.App.49–54, 57; Dictez ouy c'est ung mot, 5vv, 1556[17]; Ne le refuse mye, 4vv, 1538[19]; O doulx amour, 4vv, 1548[5]; Si mon traveil, 6vv, *Lbl* Roy.App.49–54, 57

JANE A. BERNSTEIN

**Havestadt (Hosfelman), Bernhard** [Bernardo] (*b* Cologne, 27 Feb 1714; *d* Münster, ?28 ?Jan 1781). German philologist and compiler of music. He became a Jesuit missionary in 1732 and in 1746 left for Chile, where he arrived in 1748. After the Jesuits were expelled from the Spanish Americas in 1767 he returned to Germany, and ten years later he published a linguistic treatise, *Chilidúgú, sive Res chilenses, vel Descriptio status tum naturalis, tum civilis, cum moralis regni populique chilensis* (Münster, 1777). It contains two sections critical for an understanding of the role of music in missiology. In the dictionary of the Araucanian language, sections 561–4 are devoted to native musical terminology. Part 6 includes 16 hymn texts in the Araucanian language set to European melodies with basso continuo; most of the texts are based on Catholic acts of charity and contrition. Also included are songs for the arrival of civic and ecclesiastical officials. While innumerable missionaries left accounts of the practice of making translations from the Catechism and setting them to European melodies, Havestadt was exceptional in publishing both texts and melodies with basso continuo.

ALFRED E. LEMMON

**Haville, Adriano.** *See* ANVILLA, ADRIANO.

**Havingha, Gerhardus** (*b* Groningen, 15 Nov 1696; *d* Alkmaar, 6 March 1753). Dutch composer, organist and carillonneur. He probably received musical instruction from his father, Petrus Havingha (*c*1650–1728), organist in Groningen. Gerhardus was appointed organist first in Appingedam and then, from 1722 until his death, at the Laurenskerk in Alkmaar. On his arrival in Alkmaar, he found the organ in a state of disrepair and proposed a reconstruction after contemporary German principles (including equal temperament) by Franz Caspar Schnitger, a son of Arp Schnitger; this was approved by the city magistrate and was carried through, although strenuously opposed by some citizens of Alkmaar. Havingha defended his position in an apologia entitled *Oorspronk en voortgang der orgelen* (Alkmaar, 1727/*R*), which was answered by pamphlets stating the opposing case.

Havingha published a volume of harpsichord suites, *VIII Suites gecomponeerd voor de clavecijmbal off Spinet* (Amsterdam, 1724/*R* 1990; ed. J. Watelet, MMB, vii, 1951; some ed. L. Cerutti, Padua, 1995). The suites follow the usual early 18th-century pattern with a French-style overture followed by an allemande, a courante, a sarabande and a couple of other short dance pieces, mostly closed by a gigue. The style incorporates both French *brisé* writing and German-style keyboard polyphony, a combination typical for Dutch keyboard music of that period. One suite is in A♯ minor, another in B♭ minor. Other compositions, including ensemble sonatas and suites written for the Alkmaar collegium musicum which Havingha directed, have not survived. Havingha translated David Kellner's *Treulicher Unterricht im general Bass* (Hamburg, 2/1737) into Dutch with his own comments and additions, as *Korte en getrouwe onderregtinge van de generaal bass, of bassus continuus* (Amsterdam, 1741, 2/1751).

RUDOLF A. RASCH

**Havrylets', Hanna Oleksiïvna** (*b* Vidiniv, Ivanofrank province, 11 April 1958). Ukrainian composer. She graduated from the Lvov Conservatory in 1982, having studied with V.V. Flys, and then took a postgraduate course with M.M. Skoryk in Kiev. In 1992 she returned to teach composition there after a period working as a reviewer. Her work is notable for its spontaneity, openness of feeling and sincere lyricism, and though stylistically traditional and chamber-like in conception, is not retrogressive. She makes use of Ukrainian folk genres in several compositions: the *plach* ('lament') is used as a basis for *In memoriam*, the *duma* for her Symphonic Poem and the *kolomiyka* for the Viola Sonata and the Saxophone Quartet; she herself has claimed that 'national roots are the only stimulus for our creative fantasy'. Her natural melodic gift is evident in her many vocal works.

NINA SERGEYEVNA SHUROVA

**Hawaii** [Hawai'i]. The principal island of the Hawaiian archipelago (formerly called the Sandwich Islands) in the North Pacific Ocean. Since 1959 the name has denoted the 50th state of the USA, and includes all the islands in the archipelago, of which seven are inhabited; the two main cities are Honolulu (on Oahu) and Hilo (on Hawaii). The state is well known for its cultural pluralism; the music now most widely identified as Hawaiian is a blend of simply harmonized European-style melody, Hawaiian language (or mixed Hawaiian and English) texts, and a distinctive performance style; there has also been a reawakening of interest in the styles of chant and dance attributed to the period before European contact (*see* POLYNESIA, §II, 4). The most extensively performed types of music in modern Hawaii are continental American popular music, PAN-PACIFIC POP and Western art music, discussed below.

Western music was introduced in 1778 with Captain James Cook's discovery of the islands. Native Hawaiians willingly assimilated Western music; by 1816 King Kamehameha I (*c*1793–1819) had a band of Western instruments. In the middle years of the century musical life became more varied. The strongly European outlook of Kamehameha IV (1854–63) and Kamehameha V (1863–72) created a climate favourable to Western music that persisted among the aboriginal royalty for the rest of the century, manifested in their frequent attendance at events involving Western music and drama, and occasionally in an even more active role: Kamehameha IV acted as stage manager for a local presentation of scenes from *Il trovatore* and *Martha* in 1861, while Queen Emma sang in the chorus; likewise, Princesses Bernice Pauahi Bishop and Miriam Likelike sang in the chorus of *HMS Pinafore* in 1881. The Amateur Musical Society, founded in 1853, was active in presenting concerts of vocal music for 40 years. The first opera presented in the islands was Donizetti's *La fille du régiment*, staged by professional singing actors in 1854. Nearly 40 operas and operettas were performed more or less complete in 19th-century Hawaii, some by local amateurs, but most by itinerant opera companies, which assumed financial risks in coming to the islands. After one of these groups, the DeFolco Opera Company, failed in 1916, opera and operetta were seldom performed until the founding of Hawaii Opera Theatre in 1960. The 1925 performance of *Prince of Hawaii*, an operetta by a part-Hawaiian, Charles E. King (1874–1950), an intimate of Hawaiian royalty, was an important contribution to a small body of specifically Hawaiian music dramas.

In 1872 Henry Berger (1844–1929), who had been trained in Berlin, was appointed as educator, composer, conductor of the Royal Hawaiian Military Band and director of music to the royal family, a position he held until 1915. Berger set King Kalākaua's (1874–91) text *Hawaii ponoi* as the national anthem (later the state song). Royal patronage of and participation in music ended with the deposition of Queen Lili'uokalani after her brief reign (1891–3). The opening of the Hawaiian Opera House in 1896 was the occasion for a gala performance of *Il trovatore*, the orchestra directed by Berger. The prima donna and stage director was Hawaii-born Annis Montague (1846–1920), who had had an international career as an opera singer; she was the daughter of early lay missionaries to Hawaii, Amos and Juliette Cooke; many of the Hawaiian royalty, including Lili'uokalani, learned music from Juliette at the Chiefs' Children's School in the 1840s.

Early immigrants from Europe (especially those from the British Isles, Germany, Scandinavia and Portugal's Madeira Islands), from Puerto Rico and from Asia (China, Japan, Korea, Okinawa and the Philippines) introduced their own musical traditions which their descendants have retained in varying degrees. More recently Vietnamese, the Lao, Pacific Islanders (especially Samoans and Tongans) and black Americans (mostly military personnel and their dependants) have added their own musics to those already represented.

Small orchestras were active during 1881–4 and 1895–1902; a more permanent group, the Honolulu Symphony Society, was founded by a group of Honolulu businessmen in 1902. Its performing contingent, the Honolulu SO, continues to perform. Initially the orchestra was composed mostly of amateurs. The most important of its early music directors was the British composer Fritz Hart (served 1931–49), who had also conducted the Melbourne SO. Under the Hungarian composer-conductor George Barati (1950–67) the Honolulu SO became fully professional; following him as directors were Robert LaMarchina (1967–78) and Donald Johanos (1979–93). Because of a wage dispute, the orchestra's 1993–4 season was cancelled. Many professional orchestra musicians left the islands during the work stoppage; the Honolulu

Symphony Society came to an agreement with the musicians late in 1994 and concerts were resumed in 1996 under the Chinese-Canadian Samuel Wong. The Honolulu Symphony Society has attempted to appeal to a broader audience base in its recent seasons.

Both the Honolulu Symphony Society and Hawaii Opera Theatre perform at the Neil Blaisdell Center Concert Hall (cap. 2107). The Opera Theatre became fully independent in 1980 and produces three operas in its annual season. The Honolulu Chamber Music Series brings nationally and internationally known chamber groups to Honolulu. A second chamber music series features three groups of Honolulu SO players: the Galliard String Quartet, the Spring Wind Quintet and Honolulu Brass. Other musical organizations are the Hawaii Youth Symphony, the Oahu Civic Orchestra, the Maui SO and its Chorus; the Royal Hawaiian Band in Honolulu and on the island of Hawaii the Hawaii County Band and West Hawaii Band. The Oahu Choral Society performs with the Honolulu SO; other choruses include the Hawaii Vocal Arts Ensemble, the Hawaii Youth Opera Chorus, the Kauai Chorale and the Gleemen of Honolulu, a group which dates back to the 19th century. A recently established Hawaii International Jazz Festival is becoming an annual feature of musical life in the islands. The Hawaii Music Educators' Association, associated with the Music Educators National Conference, is active in the state.

The most noted composer of Western art music born in the islands is Dai-Keong Lee (*b* 1915), of Chinese descent, who came into national prominence with orchestral works in the 1940s. Composers and teachers formerly at the University of Hawaii at Mānoa are Neil McKay (*b* 1924), Allen Trubitt (*b* 1931) and Armand Russell (*b* 1932). Two Japanese-American composers born in Hawaii, Byron Yasui (*b* 1940) and Takeo Kudo (*b* 1942), and the Virginia-born American Donald Womack (*b* 1966) teach at the university. Living in Kona is Jerré Tanner (*b* 1939). All these composers have written numerous instrumental and vocal works, including some that have blended Western music with elements from the musics of other cultures, especially Polynesian or Asian, found in the islands.

The University of Hawaii (founded 1907) has campuses at Hilo and Mānoa, Honolulu; the Music Department at Mānoa offers the PhD degree in ethnomusicology, musicology, composition and music education. Courses in music are also given at the University of Hawaii Hilo campus, Brigham Young University, Oahu, Chaminade University and at the community colleges.

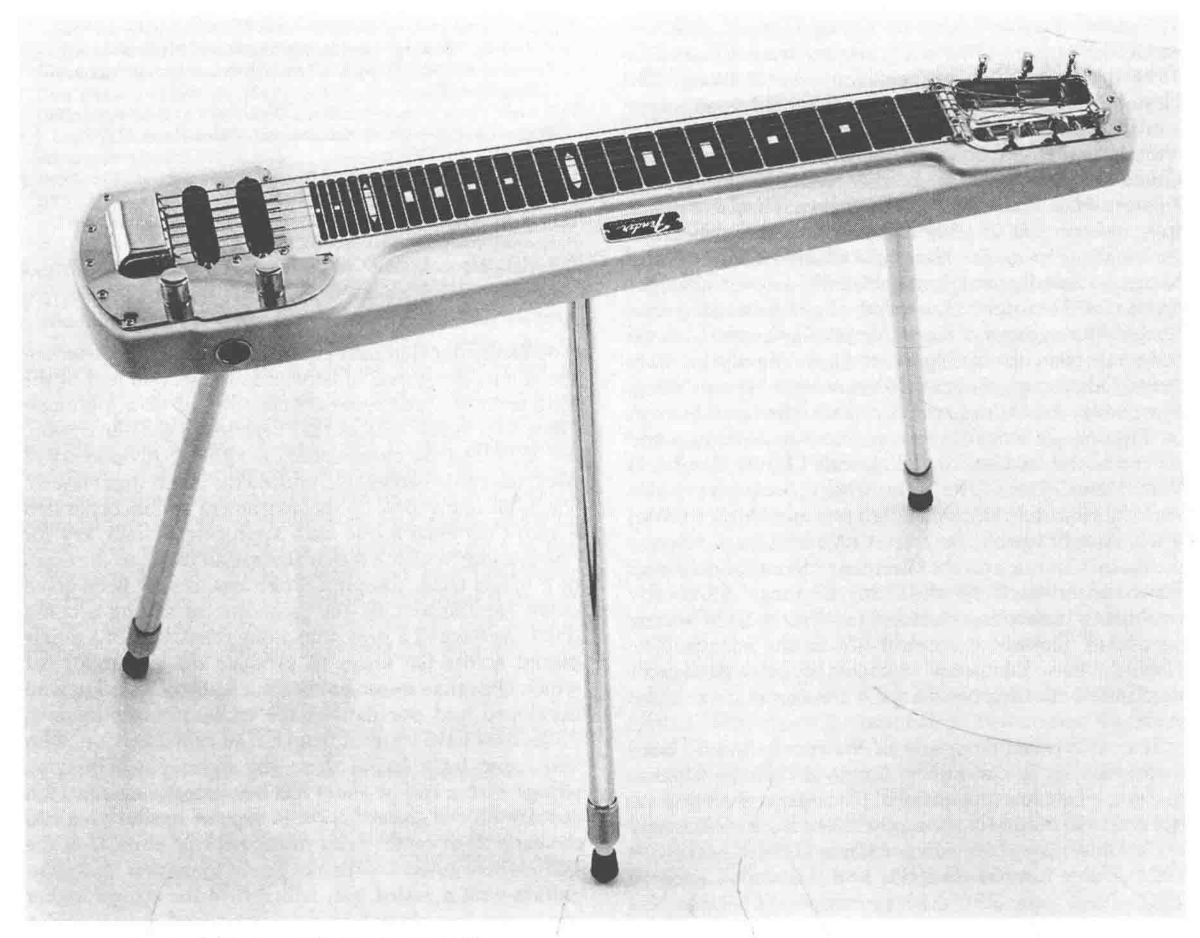
DALE E. HALL



**Hawaiian guitar** [lap steel guitar, steel guitar]. A variant of the guitar, developed in Hawaii in the second half of the 19th century. Early types are classified as chordophones: lutes; later types, such as that depicted in the illustration, are classified as chordophones: zithers. Around 1830 Mexican cattle herders introduced the guitar into Hawaii. The Hawaiians took up the instrument and incorporated it into their own music with appropriate 'slack key' or open tuning in which the strings are all tuned to the notes of a major triad. Joseph Kekuku has usually been given credit for introducing the technique of sliding a comb (later the back of a penknife) along the strings of a guitar placed across the knees to produce the glissandos for which Hawaiian music has become known. Kekuku, who developed and popularized the technique beginning in 1885, may have learnt it from a man called Davion, who had come from India; there the technique of playing strings with a rod or slider has been used since the 19th century on the *goṭṭuvādyam* (a type of fretless vīṇā). In the early 20th century this music became popular in the USA, where guitar companies began to market Hawaiian guitars with a raised nut, which held the strings higher above the fingerboard than on a normal guitar, and a steel bar as an accessory for slide playing (hence the name 'steel guitar'); the use of other objects, such as a bottleneck, for a similar sort of slide playing developed in blues at much the same time, and later became common in country music. Many musicians who played in Hawaiian style adopted the RESONATOR GUITAR during the early 1930s, while others took up the earliest manufactured ELECTRIC GUITAR, the Rickenbacker 'Frying Pan' (1932), a small steel guitar that was designed to be played across the lap. Leg-mounted electric steel guitars were introduced by the Gibson company during the 1930s. By the 1950s some models had as many as four necks. Another type, the PEDAL STEEL GUITAR, incorporated knee-levers and several pedals for rapid alterations in tuning.

HUGH DAVIES/R

**Haward.** English family of spinet and harpsichord makers. Three members of the family were active in London in the 17th century. Charles Haward (*fl c*1660–87) worked in Aldgate Street, and Queen Anne owned a virginal made by him. John Haward (*d* ?1667) made a harpsichord fitted with registration pedals (which Thomas Mace described in his *Musick's Monument*, 1676/*R*, p.235). Thomas Haward was living in Bishopsgate in 1656 and in the parish of St Giles, Cripplegate, in 1663.

*Hawaiian guitar (model De Luxe 6) by Fender, 1957–80*

An important English harpsichord dated 1622, formerly thought to be by one of the members of the Haward family, is now attributed to JOHN HASARD. Charles Haward's 1683 harpsichord (now at Hovingham Hall) is the only firmly recorded English harpsichord from the second half of the century. While the special instrument constructed for Thomas Mace had a buff stop, the 1683 harpsichord has a lute stop, a more remarkable feature. It also has a rounded tail, and stops piercing the cheekpiece; its scale is short, its bridge and specification (8′, 8′) italianate, while its four roses suggest rather the influence of English virginals. Such commixtures were not uncommon in English, French and German harpsichord making before *c*1725, and the end results often make it difficult to discern dominant trends.

Charles Haward left at least 11 bentside spinets. In his diary for 4 April 1668 Pepys noted that he 'called upon one Haward, that makes virginalls, and did there like of a little espinette ... . I had a mind to a small harpsichon, but this takes up less room' (see also his entries for 10, 13 and 15 July). The scale was often rather short in the treble and the soundboard of small dimensions in the bass. The rack, keyboards and other details of jacks and keys remained standard for all spinets well into the 18th century. But how much can be credited to Charles Haward and how much to his contemporaries, such as Player and Keene, is not clear. Nor is it known how far Mace's foot-operated stop-changing, or his specification of 8′, 8′, lute, 4′ and buff, were applied in the standard models produced by either John or Charles Haward. For details of surviving Haward instruments see Boalch.

DONALD HOWARD BOALCH, PETER WILLIAMS/ CHARLES MOULD

**Hawdon, Matthias** (*b* Newcastle upon Tyne, 1732; *d* Newcastle upon Tyne, 19 March 1789). English organist and composer. His father, Thomas Hawdon, was a parish clerk at All Saints', Newcastle. Matthias Hawdon was organist at Holy Trinity, Hull (1751–69), succeeding his teacher William Avison, at Beverley Minster (1769–76) and, from December 1776, at St Nicholas's, Newcastle upon Tyne. He directed the Newcastle subscription concerts, assuming duties previously undertaken by Charles or Edward Avison, and in 1778 conducted performances at a four-day festival held at the Assembly Rooms, which prominently featured the music of Handel. Three days after his death, and according to his own wish, Hawdon was buried in St Nicholas's, beneath the Harris-Snetzler organ. His son, Thomas, was appointed organist of Holy Trinity, Hull, in 1787, and in 1789 moved on to

All Saints', Newcastle, where he remained until his death in 1793.

Hawdon's compositional style wavered between late Baroque and *galant*, as is implicit in the title and content of his *Six Sonatas Spirituel or Voluntarys*. His responsiveness to Avison's musical influence may, as Harley observed, be manifest in the nomenclature of the *Six Conversation Sonatas* (announced in 1778); Sadie includes these works by Hawdon with others of similar type within an appreciable, though brief, north-east of England vogue. Though at times displaying routine features, Hawdon's compositions in general are pleasing, and his organ music, in particular, reflects his admiration for Handel. His hymn tune 'Beverley' has remained in use.

WORKS
*published in London*

An Ode to the King of Prussia, and Six Songs, ? op.1 (*c*1760)

GERALD GIFFORD

**Haweis, Hugh Reginald** (*b* Egham, 3 April 1838; *d* London, 29 Jan 1901). English clergyman, lecturer and writer. Haweis showed great aptitude for music and studied the violin with Antonio James Oury. At Cambridge University he formed a quartet society and became solo violinist of the Cambridge University Musical Society. Graduating in 1859, two years later he passed the Cambridge examination in theology and was ordained deacon, then priest in 1862. After some short-term curateships, he was appointed perpetual curate of St James's, Marylebone, in 1866, a position he held until his death.

Haweis was a Broad Churchman with powers of dynamic extempore preaching that drew packed congregations to St James's, where his Sunday evening services unconventionally included orchestral music and oratorio performances. In 1867 he married Mary Eliza Joy (1848–98), who gained prominence through her writings on household decoration. In 1884 Haweis supplanted J.A. Fuller Maitland as music critic of the *Pall Mall Gazette*, earning the latter's contempt. He was also editor of *Cassell's Magazine* and music critic for *Truth*, and contributed numerous articles on music to other journals and reviews. His writings, sometimes condescending in tone, are nevertheless sincere on the benefits of art and music for the masses. His widely read *Music and Morals* (London, 1871, 16/1891/*R*) argued that the experience of music has a direct influence on the moral character of the listener, and expounded theories of colour and music anticipating those of Skryabin. *My Musical Life* (London, 1884, 4/1891), in which Haweis recognized the potential of music as a healing force, included reminiscences of contemporary musicians such as Mendelssohn and eye-witness accounts of performances at Bayreuth of the *Ring* (1876) and *Parsifal* (1883). In Wagner's music Haweis saw a vindication of his own ideas on music and the emotions. He also wrote several theological books, displayed a considerable knowledge of lutherie in *Old Violins* (London, 1898/*R*) and in *Travel and Talk* (London, 1896) gave an account of his extensive travels worldwide as a lecturer.

ROSEMARY WILLIAMSON

**Hawel, Jan Wincenty** (*b* Pszów, nr Wodzisław Śląski, 10 July 1936). Polish composer and conductor. At the Katowice Conservatory he studied music education, composition with Szabelski and conducting with K. Stryj. In 1968 he joined the staff of the conservatory and in the years 1981–7 served as rector. For many years he conducted several of the region's amateur choirs and song and dance troupes, making a number of recordings for Katowice radio and television. In 1981 he was appointed conductor of the chamber orchestra of the Silesian Philharmonic. His works employ serial technique, aleatory devices in instances such as the Third Quartet, and in later works a style of writing reminiscent of the Polish sonorism of earlier years. Notable among his works are the popular *Oratorium polskie* and the Sinfonia concertante, which took second prize at the 1972 Fitelberg Competition.

**Hawes, Maria.** English singer, daughter of WILLIAM HAWES (i).

**Hawes, William (i)** (*b* London, 21 June 1785; *d* London, 18 Feb 1846). English singer, conductor and composer.

He was a Chapel Royal chorister from 1793 to 1801 and then a violinist in the Covent Garden theatre orchestra; he also taught singing and was appointed deputy lay vicar at Westminster Abbey (1803) and Gentleman of the Chapel Royal (1805). In 1814 he was appointed Master of the Choristers at St Paul's Cathedral, and in 1817 Master of the Children of the Chapel Royal, holding both posts until his death. A harsh disciplinarian and a confirmed pluralist, Hawes was too much engaged in other pursuits to devote himself to the boys' education and welfare, though they lived at his house. He was an original associate of the Philharmonic Society and an active promoter of the Regent's (later Royal) Harmonic Institution, becoming a principal shareholder in 1823–7. For a short time he was lay vicar of Westminster Abbey (1817–20) and for many years conductor of the Madrigal Society and organist of the Lutheran Chapel of the Savoy. After 1804 his connection with the stage, for which he produced a long series of adaptations of continental operas with musical interpolations of his own, occupied ever more of his time. In 1824, under the impresario S.J. Arnold, he acted as musical director of the English Opera House (Lyceum) where many of those adaptations were staged, among them Weber's *Der Freischütz* (1824), Salieri's *Tarare* (1825), Mozart's *Così fan tutte* (1828) and Marschner's *Der Vampyr* (1829). Hawes also wrote several original operettas, including *The Irish Girl* (1830) and *Comfortable Lodgings* (1832), some songs for various plays, a requiem, and a monody on the death of Princess Charlotte (1817), and published various collections of glees, madrigals (notably an edition of Morley's *Triumphs of Oriana* in 1818), chants, psalm tunes and other church music. The contralto Maria Billington Hawes (1816–86) was his daughter. (*DNB*, J.A. Fuller Maitland; *Grove1*, W.H. Husk; *SainsburyD*)

**Hawes, William (ii).** *See* HOWES, WILLIAM.

**Hawil, Adriano.** Composer, possibly related to or identifiable with ANTOINE DE HAUVILLE.

**Hawker, Peter** (*b* London, 24 Dec 1786; *d* London, 7 Aug 1853). English writer and musician. He served in the British Army retiring from active service in 1813. Although he is remembered chiefly as a writer on sport and an improver of firearms, he deserves notice as a music enthusiast, who studied the piano in England and on the Continent and whose several English residences were frequented by musicians. In 1818 he spent three months studying harmony and composition in the London academy of J.B. Logier; in 1821 he was a piano student of H.J. Bertini in Paris and, at an unspecified date, of F.W.M. Kalkbrenner. Hawker promoted Logier and his system of musical education in an anonymous publication, *Advice to a Nobleman on the Manner in which his Children should be instructed on the Pianoforte* (London, 1818, 5/1840). In 1819 Hawker's invention of hand moulds 'for running over the keys of a pianoforte in a mathematically true position' was accepted for manufacture by Chappell in London and Pleyel in Paris. The hand moulds, similar to those invented by Logier, were patented on 1 November 1820. Hawker wrote a companion textbook, *Instructions to Young Performers . . . on the Pianoforte* (London, *c*1820, 3/1840), and this, along with his invention, was described and reviewed in the *Quarterly Musical Magazine and Review*, iii (1821), p.336. Hawker travelled to the Continent in 1821 to circulate his patent and publications on music, and in 1834 he visited Logier's academy in Dublin to present his 'old friend and master' with a copy of his 'book on music', *Advice* (London, 4/1834). Several eminent contemporary musicians approved his invention, including Muzio Clementi, J.B. Cramer and Ignaz Moscheles. In 1837 he devised and had manufactured his 'new-invented tambourine'; and in 1842 his march, the *Prince of Wales's Quick Step*, was performed by the Coldstream Guards. His *Journal of a Regimental Officer* was published in 1810: other diary entries were published posthumously (edited by R. Payne-Gallway, London, 1893/*R* and E. Parker, London, 1931).

**Hawkins, Coleman (Randolph)** [Bean, Hawk] (*b* St Joseph, MO, 21 Nov 1904; *d* New York, 19 May 1969). American jazz tenor saxophonist.

1. Life. 2. Musical style.

1. LIFE. He was taught the piano, cello and tenor saxophone, and by the time he was 12 he was performing professionally at school dances. He went to high school in Chicago, then (by his own account) attended Washburn College in Topeka, Kansas, for about two years, during which time he studied harmony and composition.

In the spring of 1921 Hawkins was playing in the orchestra of the 12th Street Theater in Kansas City. That summer Mamie Smith performed at the theatre and offered Hawkins a position touring from coast to coast with her group the Jazz Hounds. From June 1923 he worked freelance in New York. Fletcher Henderson employed him to record with his band in August and engaged him when he formed a band to play at Club Alabam in early January 1924. Hawkins remained with the group until March 1934, making numerous recordings and attracting worldwide notice. In his first substantial recorded solo, on *Dicty Blues* (1923, Voc.), he revealed an authoritative style, big sound and fast vibrato.

In 1934 Hawkins contacted the English bandleader and impresario Jack Hylton and arranged to tour the country on his own with local groups. His success was such that he decided to stay in Europe, performing with the Ramblers early in 1935 in The Hague, and then playing freelance in Paris, Zürich (with the Berry's) and elsewhere; he also made numerous recordings with the Ramblers, the Berry's and other groups assembled for studio sessions. Perhaps the most famous of these sessions was one in Paris on 28 April 1937 that included Django Reinhardt and Benny Carter; Hawkins played with fervour and rhythmic drive, even beginning his solo on *Crazy Rhythm* (1937, Swing) with repeated riffs. He returned to New York in July 1939.

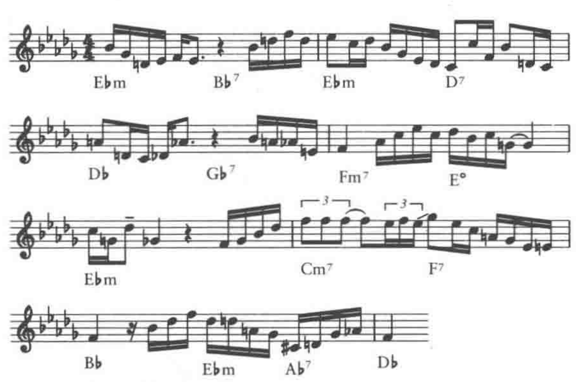
American musicians, generally unaware of Hawkins's European recordings, anxiously awaited his return. He formed a nine-piece band and opened at Kelly's Stable on 5 October 1939. At the end of a studio session a few days later he improvised two choruses on *Body and Soul* (1939, Bb), a recording which was a commercial and

musical success and which re-established his importance to musicians while introducing him for the first time to a mass audience. He then formed a big band with which he played in New York and went on tour. In 1941 he resumed working with small groups, however, and for the next two years played mostly in Chicago and the Midwest before returning to New York.

Hawkins spent most of 1945 in California, performing and recording with a group that included the modernists Howard McGhee and Oscar Pettiford (this ensemble also appeared in the film *The Crimson Canary*). He returned to the East Coast, then joined a Jazz at the Philharmonic tour which took him back to California in April 1946. During the next five years Hawkins usually joined these tours for at least a few concerts, while spending most of the year with his own groups in New York. He returned to Europe in May 1948, in late 1949, in 1950 and again in 1954, the last as part of Illinois Jacquet's tour of American service bases. He continued to lead recording groups with such talented new players as Miles Davis, Fats Navarro, J.J. Johnson and Milt Jackson. Around 1948 he recorded a fascinating unaccompanied improvisation, *Picasso* (Clef), a feat that was still beyond many of the younger generation.

During the late 1950s Hawkins continued to appear at all the major jazz festivals, often as the leader of a group with Roy Eldridge. He joined the Jazz at the Philharmonic tour of 1957, the 'Seven Ages of Jazz' tours in 1958 and 1959, travelled to Europe for brief engagements and played on television in 'The Tonight Show' (1955) and 'The Sound of Jazz' (1957). He also recorded prolifically during this time, beginning with a series of albums for the subsidiaries of Prestige in 1958, and followed by several for Impulse, including his only collaboration with Duke Ellington (1962). During the 1960s he appeared in films and on television. He often recorded and performed at the Village Gate and the Village Vanguard with a quartet comprising Tommy Flanagan, Major Holley and Eddie Locke.

*Coleman Hawkins*



Hawkins began to exhibit signs of emotional distress during the last two years of his life and was seriously affected by alcoholism. He collapsed while playing in Toronto in February 1967, and again in June while on the last tour of Jazz at the Philharmonic. He travelled to Europe with Oscar Peterson's trio and played for a month at the end of the year in Ronnie Scott's club in London with an English rhythm section, but a tour of Denmark at the beginning of 1968 was cancelled owing to his ill-health. His last concert was on 20 April 1969 at the North Park Hotel, Chicago.

2. Musical style. Hawkins's powerful and original style was largely responsible for the popularity of the tenor saxophone as a jazz instrument. On his early recordings he made much use of the characteristic technique of the day – heavily articulated slap tonguing – but he later developed a more legato approach which eventually became the norm. During his years with Henderson he absorbed musical ideas from many non-saxophonists, including his fellow band members. Most important among these was Louis Armstrong, whose smooth melodic lines and sense of swing strongly influenced Hawkins, as may be heard on the recordings made from the end of September 1924 to November 1925. By 1926 Hawkins was also being impressed by the harmonic ideas of Art Tatum. On *The Stampede* (1926, Col.) he develops question-and-answer phrasing after the fashion of Armstrong along with his own trills and triplet ornaments. On the third take of *St. Louis Shuffle* (1927, Vic.) he introduces highly technical patterns and chromatic sequences, which have achieved virtuoso complexity by *Wherever there's a will, baby* (1929, Vic.). A comparison of the two issued versions of this piece shows that the patterns are memorized and repeated verbatim at crucial points, such as at the beginning and the middle, but the rest is freely improvised. A week later Hawkins recorded a solo on *One Hour* (Vic.) that won acclaim among musicians for its richness of ideas, sensitive tone and rhythmic flexibility; he also mingled speech-like rubato phrases with moments in double time. All of Hawkins's playing is characterized by intense emotional conviction.

Hawkins continued to experiment with a complex rubato approach for the next few years, creating highly elaborate structures even at fast tempos, as on *New King Porter Stomp* (1932, OK). His solo on *Can you take it?* (1933, Voc.), however, suggests a return to playing on the beat, and demonstrates his increasing ability to improvise memorable and logically constructed melodies. At the same session Henderson's band recorded a tune by Hawkins, *Queer Notions*, which explores the whole-tone scale. Hawkins's celebrated recording of *Body and Soul* (1939) is notable for its relaxed virtuosity, warmth of sound, harmonic ingenuity, consistent use of double time and intricate development of motifs (ex.1).

Hawkins was a brilliant musical thinker who was remarkably open to new developments in jazz as well as classical music; this was reflected in both the personnel and the repertory of his groups. In February 1944 he led a band that featured Dizzy Gillespie, Max Roach and others in what are generally considered to be the first bop

**Ex.1** From *Body and Soul* (1939, Bb), bars 25—32; transcr. L. Porter

all notes at phrase endings have vibrato

recordings. Another session later the same year was the earliest to include Thelonious Monk.

By the late 1950s Hawkins's tone had hardened somewhat, and he developed a fierce approach to the blues. He still found new ideas during a sensitive, rhythmically complex treatment of *Body and Soul* (1959, on *Playboy Jazz All-Stars Album*, Playboy). He easily accepted the new bossa nova songs, recording some in 1962, but had more difficulty during a session the following year which paired him with Sonny Rollins and Paul Bley, both of whom were exploring ideas related to those of Ornette Coleman.

Young saxophonists continue to find inspiration in Hawkins's recordings. His influence has endured, even though it was somewhat eclipsed during the 1940s by that of Lester Young and later by that of John Coltrane – a testament to the intelligence and technical authority of his music. Hawkins recorded an interview for Riverside in 1956, *Coleman Hawkins: a Documentary*.

LEWIS PORTER

**Hawkins, James** (*b* 1662–3; *d* Ely, 18 Oct 1729). English organist, copyist and composer. He seems to have had a lifelong, if informal, connection with St John's College, Cambridge. Statements that he was a chorister there do not rest on any documentary evidence (indeed, some authorities identify him with a Worcester chorister, 1671–4), but he was almost certainly the same 'Mr Hawkins' who was paid for training the choir at St John's during 1681–2, and Tudway, who was personally acquainted with him, later described him (*GB-Lbl* Harl.7342) as 'sometime organist of St John's College' (probably until 1682). Hawkins also inscribed one of his anthems, *Behold, O God our defender* (*Lcm*), to 'the Great, Good and Just Nonjurors of St John's College in Cambridge' (thereby disclosing his own sympathies); in 1719 he took the degree of MusB at St John's; and one of his sons, William, was educated there. His first permanent appointment, however, was at Ely Cathedral, where at Michaelmas 1682, after an interregnum following the death of John Ferrabosco, he became organist; at the same time he also became Master of the Choristers in succession to Robert Robinson, the two posts having for some time been separate.

Except for a few slight and insignificant items, Hawkins's compositions are all for the church. About 75 anthems (56 in his autograph) and 17 services (6 in his autograph, one of them an unusually complete setting of the morning, communion and evening service, scored for strings, solo voices and full choir) survive (*Cu*). His music evidently enjoyed limited circulation, for transcripts of some of these pieces, together with a few others, also survive elsewhere (*Lbl*, *Lcm*, *Ob*). He was a vigorous and sometimes imaginative exponent both of the older imitative style and of the declamatory and ensemble-verse techniques of the Restoration, but much of his work is of uneven quality. He also, however, made careful copies (new among the Ely manuscripts at *Cu*) of a wide variety of sacred music by his contemporaries and seniors, including Purcell. His transcriptions, some of which he pieced together from fragments of old partbooks, are of considerable value to the scholar; one of them is the only source of the 1685 coronation anthem *I was glad*, ascribed to Blow by a later hand, but now attributed to Purcell. Hawkins helpfully supplied material to Tudway when the latter was forming his manuscript collection for the library of Lord Harley; Tudway seems to have reciprocated this assistance, and also tried to persuade Harley's librarian, Humfrey Wanley, to acquire what was believed to be the original score of Tallis's 40-part motet, which Hawkins owned. He referred, in correspondence with Wanley (*Lbl* Harl.3782), to 'honest James Hawkins'.

It appears that his zeal for extending the repertory of the cathedral choir outran the wishes of the chapter, which in October 1693 resolved 'that the organist shall not be allowed any bill for pricking books, setting any chorus or composing any anthems or doing anything else for the church unless his design shall be first allowed before he performs it'. His career illustrates the gradual emergence of the cathedral organist from a conventual-like seclusion to become the leading professional musician of the neighbourhood, since (by permission of the chapter and subject to his maintaining the proficiency of the choir) he undertook teaching at Bury St Edmunds and elsewhere.

He was buried in Ely Cathedral, where a memorial inscription (now obliterated) declared him to have been in his 67th year when he died, and 46 years organist of the cathedral, the latter figure being apparently no more than approximate. One of his sons, also named James, was organist of Peterborough Cathedral, 1714–50.

WATKINS SHAW/BRUCE WOOD

**Hawkins,** Sir **John** (i) (*b* London, 29 March 1719; *d* London, 21 May 1789). English music historian and antiquary, author of an important early history of music.

1. Life, 1719–76. 2. The *History*. 3. Late years.

1. Life, 1719–76. Hawkins's father was a carpenter and a Freeman of the Haberdashers' Company, who described himself as 'Citizen and Haberdasher'. The family claimed descent from the Elizabethan admiral Sir John Hawkins, but are not included in the elaborate genealogical table in Mary S. Hawkins's *Plymouth Armada Heroes* (Plymouth, 1888). His mother, Elizabeth, was the daughter of Thomas and Mary Gwatkin of Fownhope, Herefordshire. Little is known about John Hawkins's schooling; according to Chalmers, he was sent 'first to one school, and afterwards to a second, where he acquired a tolerable knowledge of Latin' (the second may have been Mr Samuel Watkins's academy in Spital Square). About 1736 he studied for a year under an architect, Edward Hoppus, and then was articled to a city attorney and solicitor, John Scott, under whom he had a hard life. Rising at four in the morning, he applied himself diligently to legal study and to the works of 'the most celebrated authors', becoming familiar with both law and literature, particularly poetry. In 1742 he was able to set up as an attorney, first at his father's house and from March 1751 at his own premises in Clement's Lane, Lombard Street.

From 1739 Hawkins published a number of essays on general topics. He began to devote his leisure to music, becoming a close friend of the blind organist and composer John Stanley, for 11 of whose solo cantatas he provided the texts, and for whom he wrote a poem 'To Mr John Stanley. Occasion'd by looking over some compositions of his lately published' (printed in the *Daily Advertiser*, 21 February 1741). He also introduced himself to William Boyce by sending him a 15-line verse *In vain philander at my feet* in November 1741. Boyce set the poem to music: it was published in the *Universal Magazine* of July 1751; his last composition was to be a setting in 1777 of a poem by Hawkins on the death of William Gostling. Among Hawkins's musical friends was Handel, of whom he was able to give some personal recollections in his *History of Music*. He became a habitué of several musical clubs which held weekly or monthly gatherings; his *History* gives a detailed and picturesque account of one of these (in the Chiswell Street home of the celebrated type-founder William Caslon). He may have played the violin and cello: about 1740 he participated in regular private concerts in a tavern in Gracechurch Street with such professionals as Stanley, who played first violin, the cellist Andrea Caporale, the oboist Thomas Vincent and the flautist Simon Balicourt. Between 1743 and 1748 he joined the Academy of Ancient Music, becoming acquainted with J.C. Pepusch, who may have stimulated his interest in antiquarianism and in 16th-century music; and in November 1748 he became a member of the Madrigal Society.

*John Hawkins: portrait by James Roberts, 1786 (Faculty of Music, Oxford)*

Another important friendship was with Samuel Johnson, whose Ivy Lane Club he was invited to join in 1749, thus being one of the earliest members. The club ceased to exist in 1756; about seven years later Johnson founded the 'Turk's Head Club', or simply 'The Club', of which Joshua Reynolds, Edmund Burke and Oliver Goldsmith were members, as well as Hawkins and others. Some years later, Hawkins retired from the club, apparently owing to the displeasure of his fellow members at his rudeness towards Burke. (His own explanation differed – that he did not take supper or like late hours; but Johnson described him as 'a most *unclubable* man', and his subsequent number of shattered friendships bears that out.)

On 24 March 1753, at St George's, Bloomsbury, Hawkins married Sidney Storer, daughter of a Highgate attorney to whom he had acted as assistant. There were apparently five children, including John Sidney (1757–1842), a lawyer and writer on literary and antiquarian subjects who also wrote *An Inquiry into the Nature and Principles of Thorough Bass on a New Plan* (1817), Laetitia Matilda (1759–1835), a popular novelist and her father's amanuensis and biographer (much of the known information about Hawkins comes from her writings), and Henry (1761–1841), also a lawyer and writer. The Hawkinses' first home was in Austin Friars, Broad Street, where they held fortnightly musical gatherings, but in 1759 a legacy of £30,000 from Sidney's brother made further legal practice unnecessary and he moved to Twickenham, where his neighbours included Horace Walpole, David Garrick, the actress Kitty Clive, the poet Paul Whitehead, the astronomer the Rev. George Costard and others. He was eventually to alienate many of his friends by a series of petty lawsuits, including one in 1763 over 20,000 nailholes allegedly made in his greenhouse wall by his neighbour, an enthusiastic gardener. At Twickenham he indulged his hobby of fly-fishing; his

interest is reflected in his prompt publication (1760) of an annotated edition of Walton and Cotton's *Compleat Angler*. He was also able to indulge his interest in music and literature, building up a fine collection of rare treatises, manuscripts and prints. In about 1749–52, supplied by Handel with information, he wrote a brief life of the composer Agostino Steffani as a preface to copies of Steffani's works; and in 1771 he contributed notes to the Oxford University Press's splendid reissue of Hamer's popular edition of Shakespeare. He also supplied additional notes to the 1773 edition by George Steevens, including an important definition of the catch 'Thou knave' in Act 2 of *Twelfth Night*, to which he also supplied the music which he had discovered in *Deuteromelia* (1609). About this time, according to Chalmers, Oxford University offered Hawkins an honorary doctorate, but no record of the offer exists; his daughter stated that he was offered the distinction of election as a Fellow of the Royal Society, which he refused.

In September 1761 Hawkins was sworn Justice of the Peace for Middlesex, and in 1763 he was elected chairman of the Quarter Sessions, an important position which he held for over 15 years. As a magistrate he acquired a reputation for severity, though not for lack of fairness. It was commonly believed that his knighthood, on 23 October 1772, was bestowed either for his vigorous action in suppressing the election riots at Brentford in 1768 and in Moorfields in 1769, or, according to Boswell, on his presenting an address to the king on behalf of the Middlesex bench. In fact, Hawkins applied for his honour, as a letter dated 19 October 1772 to a Secretary of State, Lord Rochford, reveals:

> Sir John Fielding, who is chairman of a jurisdiction subordinate to that of the county of Middlesex . . . has received the Honour of Knighthood, and the Justices of the county would look on it as a sanction to their choice, if I, their Chairman, might receive at his Majesty's hands, the same mark of his royal favour.

This and another letter to Lord Rochford, also of October 1772 (both in *GB–Lpro*), show Hawkins's jealousy and resentment of Fielding, half-brother of the novelist Henry Fielding and his successor in the Westminster magistracy. Laetitia Hawkins stated that in about 1769 her father was offered a seat in parliament, on account of his skilful drafting of a bill to reform the Turnpike Trust, but that he refused.

2. The 'History'. For many years, Hawkins had been accumulating material for a *General History of the Science and Practice of Music*, mainly from his own research in the British Museum (from October 1761 to May 1775); from his own extensive collection of manuscripts, which now included much of Pepusch's library (he probably acquired it in 1763); from the Bodleian and college libraries at Oxford and Cambridge; from the private libraries of John Stafford Smith and William Boyce; and from information supplied by Horace Walpole, the Rev. William Gostling (son of the famous bass John Gostling), George Steevens, the Duchess of Portland and others. Hawkins was engaged for 16 years on his mammoth task, which finally appeared in five quarto volumes (the fifth incorporating an *Account . . . of the Academy of Ancient Music* previously published separately in 1770), finished between 1771 and 1776 and published complete in November 1776, almost seven months after the publication of the first volume of Charles Burney's rival history. (These seem to have been the earliest histories of music published in England, apart from a 24-page pamphlet *Brief History of Musick*, by Peter Prelleur, of about 1730.)

At first Hawkins's work was warmly received; large extracts and favourable reviews appeared in several newspapers, including the *Critical Review*, the *Gentleman's Magazine* and the *London Magazine*. The *Gentleman's Magazine* pointed out a few inaccuracies, and a parody of a footnote entitled 'The Wonderful Power of Musick in its Effects on Mice and Spiders' appeared in the *St James's Chronicle* on 31 December 1776. But in general Hawkins amazed his contemporaries by his erudition and discernment. The work and its author, however, soon became the victims of a sordid intrigue motivated by the jealousy of Hawkins's rival Burney. This took the form of a series of vicious attacks in the press, mostly anonymous, written by Burney's friends at his instigation. Several of these appeared as a number of 'Gossip Joan' narratives and letters in the *Morning Post*, but the most damaging campaign was conducted in the *Monthly Review* by William Bewley, who in his reviews expressed many of Burney's own opinions about Hawkins's book. Bewley criticized Hawkins in particular for extolling the beauties of 16th- and 17th-century music at the expense of modern musical styles, especially the current trends in opera, which Hawkins found 'most unnatural and absurd', while the instrumental music of the day was 'noise without harmony': a view in direct contrast to Burney's idea of music history as a continuous development which was reaching its zenith in his own day. Some aspects of Hawkins's work invited criticism, including the 'lack of any visible plan' pointed out by Bewley – it was arranged systematically into five volumes each containing four books mostly of ten chapters, with little regard to grouping of subject matter and with no chapter headings or table of contents. Hawkins's rather pompous turn of phrase (derived from his legal training) also came under fire, together with his attention to minute details of musicians' domestic lives and his digressions on interesting but often irrelevant subjects (such as the observation on the effect of music on animal life which drew the satirical parody in the *St James's Chronicle*). Bewley concluded his reviews by stating that Hawkins's work could not properly be called a history, although it contained 'fit materials for an history'; the whole, he said, was 'blended and confounded with an inordinate mass of other matter, on which candour itself, in one of its most generous fits, cannot honestly bestow a more favourable appellation than that of *rubbish*'. (On these reviews, Samuel Johnson made the memorable comment: 'I think them very impartial: I do not know an instance of partiality'.) Burney's parting shot was a long satirical poem written by himself and circulated among his friends in manuscript, entitled *The Trial of Midas the Second or Congress of Musicians* (now in *GB-Mp*), in which Hawkins is prosecuted by Science, Taste, Wit, Candour and Fame, condemned by the judge (Boyce), and his effigy and worthless volumes thrown into Fleet Ditch. The sales of the *History* declined; a contributory factor may have been the prohibitively high price (six guineas). The *History* was reprinted in 1853 and 1875.

A comparison of the histories by Burney and Hawkins is inevitable, although they are complementary rather than conflicting. Hawkins's contains valuable information about early 18th-century musical society in London,

largely collected from survivors of the period, and emphasizes the achievement of 16th-and early 17th-century composers, who were treated condescendingly by Burney. Burney, on the other hand, had a considerably greater knowledge and insight into European musical trends and society and his musical analyses are technically superior to those of Hawkins. His literary style also was celebrated for its grace and wit, qualities which Hawkins lacked; and his work was better organized than Hawkins's. In many respects, however, Hawkins was a pioneer, to whose work Burney owed a great deal although he publicly ignored Hawkins's accomplishment. William Chappell and others charged that Burney 'copied especially John Hawkins, without acknowledgment, and disguised the material by altering the language'. Some sections of Burney's *History* are, in fact, based in whole or part on Hawkins's work.

3. LATE YEARS. In 1784 Johnson died, appointing Hawkins as one of his executors. He was asked by a syndicate of London booksellers to write a life of Johnson and to prepare a complete edition of his works (both published in 1787), though a series of anonymous articles (by George Steevens) in the *St James's Chronicle* attacked Hawkins and promoted James Boswell as a more worthy biographer of Johnson. Although Hawkins's *Life of Samuel Johnson* offers valuable information derived from his long and close association with Johnson, and from his attempt to portray the man in relation to his social background, it suffers from garrulity and irrelevance, while the literary style is even more tortuous and smattered with legal mannerisms than that of the *History*. The publication drew unfavourable reviews from all quarters: not content with virulent parody of Hawkins's style, the critics accused him of malevolence towards his subject and of presenting Johnson with 'a dark uncharitable cast'. The book went into one more edition in 1787 before it was superseded by Boswell's work in 1791.

In 1777 the country home at Twickenham was abandoned and the Hawkins family moved to a house, bought in 1761, in Hatton Garden. A series of burglaries induced them to move once more, to Westminster, where on the evening of 23 February 1785 a fire destroyed most of Hawkins's library and collection of prints. (He had previously donated his treatises and some music manuscripts to the British Museum.) He subsequently lived at Broad Sanctuary, Westminster, where he wrote his final literary effort, 'Memoirs of Dr William Boyce', as a preface to the 1788 reissue of Boyce's *Cathedral Music*. In May 1789 he had a stroke while taking the waters at Islington Spa, and shortly after his return home he suffered a second, fatal one. He was buried in the cloisters of Westminster Abbey on 28 May 1789. Hawkins was little mourned; the remarks of his contemporaries indicate that he was not popular. Reynolds described him as 'mean and grovelling'; Bishop Percy said he was 'detestable'; Jeremy Bentham stigmatized him as 'a most insolent, worthless fellow'. Horace Walpole maintained that he was 'a very honest, moral man, but of no brightness and very obstinate and contentious'. Johnson declared him 'an honest man at bottom' but said that he was 'penurious' and had a 'degree of brutality and a tendency to savageness that cannot easily be defended'. However, as a magistrate Hawkins always discharged his duty conscientiously; he twice surprised his musical and literary rivals Burney and Boswell by his courtesy and civility; and his friends and their dependants benefited considerably from his generosity, especially the families of Boyce and Gostling. The only known portrait of him, by James Roberts (1786), which was much disliked by his children, was given by the artist to the Music Room at Oxford (see illustration).

PERCY A. SCHOLES/R

**Hawkins, John (ii)** (*b* Montreal, 26 July 1944). Canadian composer and pianist. He studied at the Conservatoire de Musique du Québec in Montreal with Lubka Kolessa (piano), among others, and at McGill University, where his teachers included István Anhalt (BMus 1967, MMA 1970). As a pianist, he has appeared in concert and on recordings with Société de Musique Contemporaine du Québec and New Music Concerts, Toronto. In 1970 he was appointed to a post at the University of Toronto, where he has organized and participated in lecture-recitals on 20th-century vocal works (from 1994).

Hawkins' compositional style aims to be both contemporary and accessible. *Remembrances* (1969) quotes elements from Beethoven, Brahms and Mahler, while *Breaking Through* (1982) calls upon Broadway idioms. *Three Archetypes* (1984, rev. 1986) was commissioned by the CBC as a test piece for the 1986 Banff International String Quartet Competition. Later works include *The First Fable* (1988), a theatre piece for children, and the chamber ballet *Buffalo Jump* (1993). *Dance Variations* (1983, rev. 1986) has been recorded.

WORKS
(*selective list*)

Stage: The First Fable (theatre piece), spkr, S, Mez/A, chbr ens, 1988; Buffalo Jump (chbr ballet), nar, chbr ens, 1993

Vocal: 3 Cavatinas (W. Whitman, W.B. Yeats, J. Burroughs), S, chbr ens, 1967; Prelude and Prayer (e.e. cummings), T, orch, 1980; Breaking Through, 1v, pf, perc, 1982; Nightsong (D. Thomas), Bar, mar, str qt, 1995; If there are any heavens ... (cummings), S, chbr ens, 1996

CLIFFORD FORD

**Hawkins, John Isaac** (*b* nr Taunton, 14 March 1772; *d* Elizabeth, NJ, 24 June 1854). English engineer, inventor and piano maker. He spent part of his life in the USA and is best known for his invention of the upright piano and the self-propelling pencil. (Matthias Müller invented the upright piano independently in Vienna about the same time.) Previously, upright pianos were either grands or squares turned on end and placed on a stand, but Hawkins's achievement was to use the space below the keyboard down to the floor. He called his piano a 'portable grand' and patented it in 1800 in Philadelphia and London, his father, Isaac Hawkins, acting as his agent in England. The patent contains a wide range of additional inventions including the addition of metal bracing to support the wooden structure, and mechanical wrest pins that worked in a metal-covered wrest plank (*see* PIANOFORTE, §I, 6). This was the first use of metal to stabilize the frame in any piano, and the compensation frame was later developed further by a number of makers, notably the Stodart firm. Hawkins also used an outer covering of cloth on top of layers of leather on the hammers. Two of Hawkins's surviving pianos (in the Marlowe A. Sigal Collection, Newton Center, Massachusetts, and in the Smithsonian Institution, Washington, DC) are fine examples of cabinet work, both incorporating a keyboard that folds up and handles on either side for easy transport. Hawkins advertised that his pianos could be purchased 'at little more than half the price of imported grand or square pianofortes', but his instruments were never popular: in April 1802 Thomas Jefferson complained that his piano would not stay in tune. The 1885 International Inventions Exhibition catalogue states that Hawkins brought his upright piano to London, and that daily performances were given on it but with no success: 'the ingenuity and even genius displayed in its invention being unsupported by that first desideratum of a Pianoforte, good tone'.

Hawkins also invented the 'claviole' (*see* CLAVIOLA (i)), a bowed keyboard instrument in the shape of an upright piano. It was shown in London in 1813–14, whereupon Hawkins abandoned his pursuit of its manufacture owing to the expiration of his patent. Hawkins returned to the USA in 1848.

MARGARET CRANMER/MICHAEL D. FRIESEN

**Hawlata, Franz** (*b* Eichstätt, 26 Dec 1963). German bass. He studied at the Musikhochschule in Munich with Haefliger, Hotter and Erik Werba. His stage début was in 1986 at the Theater am Gärtnerplatz in Munich, where he was under contract and built his repertory. He has since appeared in many major houses in a wide variety of roles, among them Baron Ochs at the WNO, Covent Garden and the Metropolitan (début 1995), Rocco in *Leonore* on tour and on disc with John Eliot Gardiner, and Osmin in *Die Entführung aus dem Serail* (Salzburg Festival, 1996). At the Vienna Staatsoper he was admired as Nicolai's Falstaff (1994) and with Covent Garden (at Sadler's Wells Theatre) as Kecal (*The Bartered Bride*) in 1998. In the Italian repertory Hawlata's roles include Sparafucile and Colline. Among his recordings his Mephisto in Spohr's *Faust* and Water Goblin in *Rusalka* are outstanding. His strong, flexible bass and gifts as an actor make his Osmin, Caspar (*Der Freischutz*) and Ochs among the most admirable of the day.

ALAN BLYTH

**Hawte, William.** *See* HAUTE, WILLIAM.

**Hawthorne, Alice.** *See* WINNER, SEPTIMUS.

**Hawthorne** [Hathorne], **Nathaniel** (*b* Salem, MA, 4 July 1804; *d* Plymouth, NH, 19 May 1864). American novelist and writer. He worked in the customs houses of Boston (1839–41) and Salem (1845–9) and was US Consul at Liverpool, 1853–7. His writings, which include five novels and several volumes of short stories, have inspired more musical adaptations than the fiction of any other American. There are more than 11 operas on *The Scarlet Letter*, the earliest, of *c*1855, by Lucien H. Southard (1827–81). Walter Damrosch's version is to a libretto by G.P. Lathrop, Hawthorne's son-in-law; 20th-century settings include those of Vittorio Giannini and Walter Kaufmann.

The most frequently set short stories are *Dr. Heidegger's Experiment*, *Rappaccini's Daughter* and *Young Goodman Brown*. Howard Hanson based part of his *Merry Mount* on Hawthorne's *The May-Pole of Merry Mount* and Bruce Saylor set *My Kinsman, Major Molineux*. Programme music includes Cecil Burleigh's *Land of Olympus* for piano and J.T. Howard's *Mosses from an Old Manse*, for string orchestra. The scherzo of Ives's Second Piano Sonata is an impressionistic picture of Hawthorne.

MICHAEL HOVLAND

**Haxby, Thomas** (bap. York, 25 Jan 1729; *d* York, 31 Oct 1796). English maker of harpsichords, spinets, pianos, organs, barrel organs, citterns and violins. He was the son of Robert Haxby, a joiner, from whom he presumably learnt his woodworking skills. In 1750 he became parish

clerk of St Michael-le-Belfry, York, and at about the same time he was appointed a singing man of York Minster; he held both posts until his death. He opened a music and instrument shop 'at the Organ Blake Street' in York on 15 June 1756. No mention was made of his making instruments until he became a freeman of York in 1758, but from 1754 he received an annual salary for tuning and repairing the organ in York Minster. He repaired the organ of Leeds Parish Church in 1760 and built a new organ for St Mary's, Scarborough, in 1762. His largest instrument was the organ for St James's, Louth (1768; two manuals, 15 stops); this was replaced by Gray & Davison in 1857, but survived until 1868 in the church of St Thomas, Agar Town, in north-west London. On 28 December 1770 he was granted a patent (no.977) for a 'single harpsichord' (two 8′ stops, 4′, lute and harp), which produced ten registrations by the use of one pedal. A 1764 spinet is described in Koster. Haxby built a barrel organ in 1782.

In the *York Courant* of 14 October 1788 Haxby announced the disposal of his printed music business to Samuel Knapton, who succeeded him at a new shop in Blake Street. Haxby's brother-in-law and nephew, who had both worked for him for some years, particularly in finishing his instruments, took over his instrument business on his death, renaming it Tomlinson & Son (*York Herald*, 5 November 1796).

Haxby's surviving square pianos are carefully made and attractive with tasteful nameboard decoration. His annual production increased to 24 instruments by 1787 and reached 36 in 1790. They were numbered and dated on the bottom key-lever, and were based on the earliest English models (up to five octaves, single action with overdampers). Haxby sometimes replaced the handstops with pedals, one of which operated a lid swell. He was a finer craftsman than many of his contemporaries in London.

MARGARET CRANMER

**Haxthausen, August (Franz Ludwig Maria)** Freiherr von (*b* Bökendorf, nr Brakel, Westphalia, 3 Feb 1792; *d* Hanover, 31 Dec 1866). German folksong collector. He was educated as a geologist, mineralogist and lawyer, and, as a distinguished agricultural historian, made extensive journeys through Prussia and Russia. Stimulated by his generation's interest in folksongs, and by his family's enthusiasm for the collections of fairy tales and sagas of the brothers Grimm, he abandoned a political career after the revolution of 1848 to devote himself to theosophical, geological and musical studies, and to the collecting of folksongs. He planned a *Werk vom deutschen Volksgesang*, on which the brothers Grimm and Joseph Görres were supposed to collaborate, but this work was never realized. Haxthausen therefore published only the sacred songs in his collection under the title *Geistliche Volkslieder mit ihren ursprünglichen Weisen* (Paderborn, 1850); of the remaining songs, only those collected in Westphalia were published, 12 years after his death, by A. Reifferscheid (*Westfälische Volkslieder*, Heilbronn, 1879). In editing his collections, Haxthausen was concerned with a scientifically exact, unaltered text, which nevertheless could be used for practical performance.

HORST LEUCHTMANN

**Hay, Edward Norman** (*b* Faversham, 19 April 1889; *d* Portstewart,10 Sept 1943). Northern Ireland composer and critic. He was born in England but brought up in Coleraine, Co. Londonderry. Study in Belfast led to a BMus degree from Oxford and FRCO in 1911 and the degree of DMus for composition in 1919. Various short-lived appointments followed, including the directorship of Music at Campbell College, Belfast (1922–3), and the position of external examiner (degrees) at Trinity College, Dublin (1923–4).

Hay's more important compositions include a String Quartet in A (Carnegie Trust Award, 1918), described by the adjudicators as 'a work of remarkable originality, large conception, and high achievement'. The tone poem *Dunluce* (1921) had a performance at the London Proms in September 1925; a choral and orchestral work *To Wonder* was commissioned for the Belfast Philharmonic Society's jubilee (1924); for the opening of the Belfast station of the BBC, 2 BE, Hay provided an orchestral *Fantasy on Irish Folk Tunes* (1924) followed by *Four Irish Sketches* (1929–32). The last large-scale choral and orchestral piece, *Paean* (1930), was performed at the Three Choirs Festival in 1932 and the Proms in 1934. His final major work was another orchestral piece, *An Irish Rhapsody*, written in 1932. From then until his death he was involved in three activities: musical critic of the *Belfast Telegraph* from 1926 (with the pseudonym 'Rathcol'), general editor and arranger of 'Ulster Airs' for the BBC and Lecturer in Music at Queen's University, Belfast (1941).

Hay's music displays expert orchestration, tonal harmony described in his own words as 'largely diatonic with chromatic decoration in a free modern manner' and a melodic style in which the influence of Irish folksong is often apparent. The fine song arrangements, especially the beautiful *Tryste Noel*, the two anthems and the descriptive orchestral pieces are worthy of performance.

WORKS

BARRY BURGESS

**Hayasaka, Fumio** (*b* Sendai, 19 Aug 1914; *d* Tokyo, 15 Oct 1955). Japanese composer. He was brought up in Sapporo, Hokkaidō, where he met Ifukube – like himself, a self-taught composer. They organized the Shin Ongaku Renmei (New Music League) in 1933 and held a festival of contemporary music the next year. Hayasaka's career as a composer began auspiciously in 1935 when his *Futatsu no sanka e no zensōkyoku* took first prize in the Japanese radio competition. He won the Weingartner Prize for *Kodai no bukyoku* in 1938, and in 1939 he moved to Tokyo, where he established himself as a successful composer for films. A member of the Shin Sakkyokuha Kyōkai from 1947 to 1953, he founded the Association of Film Music in 1950. As a composer he advocated pan-orientalism, taking his melodic (e.g. pentatonic and other scales) and harmonic (e.g. chords in 4ths) materials from eastern sources. His film scores include that for *Rashōmon*, the first Japanese film to win recognition abroad.

WORKS

Principal publisher: Ongaku-no-Tomo Sha

MASAKATA KANAZAWA

**Hayashi, Hikaru** (*b* Tokyo, 22 Oct 1931). Japanese composer. He began composition studies in 1941 with Otaka and continued in 1951–3 with Ikenouchi at the Tokyo National University of Fine Arts and Music. His Symphony in G won the Grand Prize at the Art Festival of Japan in 1953, in which year he organized the group Yagi no Kai with Mamiya and Yūzō Toyama. Since then he has received several other awards, including the Otaka Prize in 1956 (for the Variations for orchestra) and 1996 (for the Viola Concerto), the Music Award of the 1961 Moscow Cinema Festival, and the Mainichi Cinema Competition Music Award (1982) for his film score *The Unfinished Match*. In 1958 he toured mainland China with the Matsuyama Ballet Company where his ballet *Haku mō jo* was enthusiastically received at performances in Beijing, Chungking, Shanghai and Wuhan. He became music director of the opera theatre Konnyaku-za in 1972, encouraging there the development of authentic Japanese operatic styles. In the 1980s he began to combine Okinawan folk music and Baroque polyphony with his primarily diatonic and classical compositional style. He is best known for a lyrical, natural treatment of Japanese text in his songs, choral works and opera and his music for theatre, film and television. An active music critic, he has written several books.

WORKS
(*selective list*)

Op: Esugata nyōbō [The Beautiful Wife] (2, after S. Yashiro), 1961; Hakuboku no wa [The Chalk Circle] (chbr op, 2, T. Hirowatari, after B. Principal publishers: Kawai Gakufu, Ongaku-no-Tomo Sha, Zen-on Gakufu

MASAKATA KANAZAWA/JUDITH ANN HERD

**Hayashi [Nagaya], Kenzō** (*b* Osaka, 1 May 1899; *d* Nara, 9 June 1976). Japanese musicologist. He became a successful sculptor soon after graduating from Tokyo Fine Arts School in 1924, but as an art student he was also interested in music, playing the french horn and composing. His musical interest gradually directed him to the study of ancient Asian music. In 1928 he met the Chinese scholar Kuo Mo-jo, who encouraged his research and urged him to write a book on his findings. His first book, *Sui T'ang yen-yüeh tiao yen-chiu* ('Study of the modes of festival music of the Sui and Tang Dynasties'), was completed in 1935, translated into Chinese by Kuo, and published in Shanghai in 1936. His next project was to decipher tablature notations of ancient musical instruments. In 1948 he was commissioned to undertake what was to become his life's work, research on the notation of early Chinese instruments in the Shōsōin, the imperial storehouse in Nara from the 8th century. He published his findings in *Shōsōin gakki no kenkyū* (1964). Three other books, not published in Japan, have been translated into Chinese.

MASAKATA KANAZAWA

**Hayden, George** (*d* ?London, before 19 Sept 1722). English composer and organist. As a singing-boy of St Paul's Cathedral in 1698 he would have been trained by Blow (and later, also possibly by Jeremiah Clarke (i)). He was organist of St Mary Magdalen, Bermondsey, from December 1713, until his death (probably in summer 1722). In April 1718 he was runner-up in the contest to choose Greene's successor as organist of St Andrew's, Holborn. His *Six New Songs with full Symphonies, after the Italian Manner* were advertised in 1713, but no copy is known to survive. He is chiefly remembered for three italianate cantatas to English texts, published as a set by Walsh in 1717 (*Martillo*, *Thyrsis* and *Neptune and Amymone*). These were reprinted a number of times and were evidently quite popular, their rather Handelian style earning the approbation of both Burney and Hawkins. Indeed, Burney regarded them as 'the best which had been produced since Purcell's time'. All three are in the classic recitative–aria–recitative–aria form. The airs have a certain tunefulness and, though certain Purcellian traits remain, they rely very heavily upon repetition and sequence within a conventional and circumscribed tonal ambit. Among Hayden's other songs, published singly and in anthologies, *Mad Tom* seems to have owed its great popularity to Bartholomew Platt, who used to perform it at Sadler's Wells 'to the great delight of all who mistook roaring for singing' (Hawkins). A two-part song, *As I saw fair Clora*, continued to be performed long after Hayden's death; it was reprinted twice in the 19th century and again in 1930.

MALCOLM BOYD/H. DIACK JOHNSTONE

**Haydn, (Franz) Joseph** (*b* Rohrau, Lower Austria, 31 March 1732; *d* Vienna, 31 May 1809). Austrian composer, brother of MICHAEL HAYDN. Neither he nor his contemporaries used the name Franz, and there is no reason to do so today. He began his career in the traditional patronage system of the late Austrian Baroque, and ended as a 'free' artist within the burgeoning Romanticism of the early 19th century. Famous as early as the mid-1760s, by the 1780s he had become the most celebrated composer of his time, and from the 1790s until his death was a culture-hero throughout Europe. Since the early 19th century he has been venerated as the first of the three 'Viennese Classics' (Haydn, Mozart, Beethoven). He excelled in every musical genre; during the first half of his career his vocal works were as famous as his instrumental ones, although after his death the reception of his music focussed on the latter (except for *The Creation*). He is familiarly known as the 'father of the symphony' and could with greater justice be thus regarded for the string quartet; no other composer approaches his combination of productivity, quality and historical importance in these genres. In the 20th century he was understood primarily as an 'absolute' musician (exhibiting wit, originality of form, motivic saturation and a 'modernist' tendency to problematize music rather than merely to compose it), but earnestness, depth of feeling and referential tendencies are equally important to his art.

1. BACKGROUND, CHILDHOOD, CHOIRBOY, 1732–*c*1749. Documentary information on Haydn's life and musical activity before his employ by the Esterházy court in 1761 is scanty. The primary sources comprise an autobiographical letter of 1776 and brief biographies published just after his death by (in order of general reliability) Georg August Griesinger, Albert Christoph Dies, Giuseppe Carpani and Nicolas Etienne Framery, supplemented by parish registers, musical archives, dated autographs and the like. Haydn was born into a family of primarily south German stock, albeit in an area of considerable ethnic diversity in which Croats and Hungarians were also prominent. His immediate ancestors were not peasants (as legend has it), but artisans and tradespeople. His grandfather and his father, Mathias (1699–1763), were master wheelwrights; Mathias also functioned as *Marktrichter* (magistrate) of the 'market village' (as Haydn called it) Rohrau, near Bruck an der Leitha. Rohrau was a possession of Count Karl Anton Harrach (1692–1758); his grandson Karl Leonhard (1765–1831) erected a monument to Haydn in the castle garden in 1793. Haydn's mother, Anna Maria Koller (1707–54), had before her marriage in 1728 been a cook at the Harrach castle.

Mathias Haydn was 'a great lover of music by nature' (this phrase in Haydn's laconic account is ordinarily taken as applying to Harrach, but it must be his father who was meant), who 'played the harp without reading a note of

*1. Joseph Haydn: portrait by Johann Basilius Grundmann, c1768 (probably destroyed in World War II)*

music'; his mother sang the melodies. Indeed all three of their surviving male children became professional musicians, two of them famous composers. (The third, Johann Evangelist, 1743–1805, was a tenor in a church choir and later at the Esterházy court.) Dies says of Haydn's father that 'all the children had to join in his concerts, to learn the songs, and to develop their singing voice', adding that he also organized concerts among the neighbours.

Haydn's talent became evident early on. 'As a boy of five I sang all [my father's] simple easy pieces correctly'; according to Griesinger he still remembered these melodies in old age. 'Almighty God . . . granted me so much facility, especially in music, that when I was only six I boldly sang masses down from the choirloft, and could also get around on the harpsichord and violin.' In 1737 or 1738 Johann Mathias Franck, a cousin of Mathias Haydn's by marriage and a school principal in the nearby town of Hainburg (Mathias's birthplace), heard Haydn sing in the family circle; Griesinger and Dies also have him pretending to be playing a violin by scraping a stick against his arm. Franck was so impressed by Haydn's voice and musical accuracy that he suggested that he come to live with him, 'so that there I could learn the rudiments of music along with other juvenile necessities'. It being clear that his abilities could not be developed in Rohrau, his parents agreed, whether in the hope that he might amount to something as a musician or the belief that musical and educational accomplishments might be useful in what they (especially his mother) imagined as his true calling, that of a priest.

Franck was not only a school principal but the choir director of a Hainburg church; presumably he oversaw Haydn's education personally. The latter was scarcely an autodidact, as myth used to have it. Griesinger writes:

> He received instruction in reading and writing, in the catechism, in singing, and on almost all the string and wind instruments, and even on the timpani: 'I will be grateful to this man even in the grave', Haydn often said, 'that he taught me so much, even though in the process I received more beatings than food'.

Such exaggerations aside, he doubtless made rapid progress; his account of mass singing and harpsichord and violin studies 'in my sixth year' implies that these took place in Hainburg. As Griesinger says, his schooling was not musical alone; this was also the case when he was a choirboy in Vienna, where his non-musical studies, though 'scanty', included Latin, religion, arithmetic and writing.

In 1739 or 1740 ('in my 7th year'; Griesinger and Dies: in his eighth year) Haydn was recruited to serve as choirboy at the Stephansdom in Vienna: 'Kapellmeister Reutter, on a trip through Hainburg, heard my thin but pleasant voice from a distance, and at once accepted me into the *Capell Hauss*' (choir school). Georg Reutter the younger, Kapellmeister at the Stephansdom since 1738 (later Hofkapellmeister), was travelling through the provinces in search of new talent; in Hainburg the parish priest, an old friend, suggested that Haydn might be a suitable candidate. According to several accounts Haydn did not know how to trill but, after Reutter demonstrated, triumphantly got it right on his third attempt, thus sealing his acceptance. For the next ten years, 'I sang soprano both at St Stephan's and at court to great applause'. At the choir school, 'I was taught the art of singing, the harpsichord and the violin by very good masters'; in singing these included Adam Gegenbauer and the tenor Ignaz Finsterbusch (both *d* 1753). To be sure, there was apparently little formal training in theory or composition, although the singing included *solfeggio* and the harpsichord instruction probably entailed figured bass. But in their enthusiasm for the notion that Haydn's development amounted to 'making something out of nothing' (Dies, allegedly quoting Haydn), most accounts again exaggerate this supposed lack of instruction. 'Haydn recalled having had only two lessons [in theory] from the worthy Reutter', writes Griesinger, but if he could recall two, he might have had more. In any case, 'Reutter encouraged him to make whatever variations he liked on the motets and Salves that he had to sing in church, and this discipline soon led him to ideas of his own, which Reutter corrected'; this scarcely implies outright neglect.

It was surely not on Haydn's own that 'he also came to know Mattheson's *Der vollkommene Capellmeister* (1739) and Fux's *Gradus ad Parnassum* (1725). With tireless exertion Haydn sought to understand Fux's theory; he worked his way through the entire treatise'. However, although both Griesinger and Dies mention Fux in the context of the choir school, Haydn's study of him would more plausibly have taken place during the 1750s. In any case, his copy of *Gradus* is heavily annotated (in Latin); he made it the basis of his own teaching of composition, as did Mozart. Another activity entrusted to competent older choirboys was the instruction of their younger colleagues in musical fundamentals; among those whom Haydn taught was his brother Michael, who joined him there about 1745. Most important, for ten full years,

at a highly impressionable age, Haydn rehearsed and sang in performances of the greatest art-music then being produced in Catholic Europe, amid the pomp and splendour of the cathedral and court of an imperial capital. This experience will have fundamentally shaped his musical intellect even without formal training in composition.

But this life could not last; his voice broke. A characteristic anecdote adds insult to injury by relating that after one performance Maria Theresa said that he sang 'like a crow', while rewarding Michael for his beautiful singing. Griesinger states that Reutter had earlier suggested that Haydn might become a castrato, but his father refused permission (although this seems potentially inconsistent with his parents' original hope that he become a priest). Be this as it may, soon after his voice broke he was dismissed from the choir school. Haydn wrote that he remained there 'until into my 18th year' (i.e. April 1749 to March 1750); Griesinger's estimate, 'in his sixteenth year', is generally thought to be too early. Carl Ferdinand Pohl, who had access to many documents now lost but gives no source in this instance, writes: 'We find Haydn on the street; it was a damp November evening in 1749'. Pathos aside (the date and atmosphere derive from Framery), the date is consistent with Haydn's statement.

2. Vienna, *c*1750–61. Haydn's account of his freelance 1750s narrates a classic 'rags to riches' story:

> When my voice finally broke, for eight whole years I was forced to eke out a wretched existence by teaching young people. Many geniuses are ruined by this miserable [need to earn their] daily bread, because they lack time to study. This could well have happened to me; I would never have achieved what little I have done, had I not carried on with my zeal for composition during the night. I composed diligently, but not quite correctly, until I finally had the good fortune to learn the true fundamentals of composition from the famous Porpora (who was in Vienna at the time). Finally, owing to a recommendation from the late [Baron] von Fürnberg (who was especially generous to me), I was appointed as director with Count Morzin, and from there as Kapellmeister with his highness Prince [Esterházy].

This period comprises three stages, of which the first two overlap without clear division. (1) During the 'lean years', about 1749 to the mid-1750s, Haydn was a freelance musician, teacher and budding composer. Even then, however, he was reaping professional and social advantage from contact with figures such as Porpora and Metastasio. (2) Beginning around 1753, and increasingly after 1755, his compositional activity expanded, as his reputation and access to patronage grew. (3) His first regular appointment, as director of music for Count Morzin, began probably in 1757 and lasted until winter 1760–61 or spring 1761.

Haydn's first lodgings (according to Framery) were offered by Johann Michael Spangler, a tenor (later *regens chori*) at the Michaelerkirche, in a garret with Spangler's wife and infant son (*b* February 1749). This situation obviously could be no more than temporary, especially as Spangler's wife was soon pregnant with their second child, Maddelena (*b* 4 September 1750); these birthdates are consistent with Haydn's having moved there in November 1749 and with Framery's account. (In 1768 Haydn engaged Maddelena Spangler as a soprano at the Esterházy court, where among other roles she created Vespina in *L'infedeltà delusa* and Rezia in *L'incontro improvviso*; she was also the first Sara in *Il ritorno di Tobia*.) Another good deed was done him by Johann Wilhelm Buchholz, a lacemaker, whose granddaughter was remembered in Haydn's will 'because her grandfather lent me 150 gulden without interest in my youth and great need'; the amount was close to a year's salary for an ordinary musician at a minor court. It was perhaps in the following spring (1750) that he journeyed to the huge Benedictine pilgrimage church in Mariazell (Styria). Griesinger relates that he took with him 'several motets which he had composed and asked the *regens chori* there for permission to put out the parts in the church and sing them', and continues with an anecdote according to which Haydn the next day got his way by trickery. If 'motet' means a liturgical work other than a mass, it can only have been his first *Lauda Sion* hymns, HXXIIIc:5; another possibility is the *Missa brevis* in F. In any case this pilgrimage was important to Haydn; later he composed both the *Missa Cellensis* and the 'Mariazellermesse' with Mariazell in mind.

According to Pohl, it was in the spring or summer of 1750 that Haydn occupied his most frequently described early lodgings: a 'miserable little garret without a stove' (Griesinger) in the so-called Michaelerhaus, attached to the Michaelerkirche. At this time 'his entire life was devoted to giving lessons, the study of his art, and performing. He played in serenades and in orchestras for pay, and devoted himself diligently to composition, for "when I sat at my old, worm-eaten clavier, I envied no king his good fortune"'. Here occurred the first of many strokes of luck through which, in addition to his genius and unremitting labour, he gradually improved his professional lot. Griesinger writes:

> In the same house . . . lived as well the famous poet Metastasio. He was raising one Fräulein Martinez; Haydn was engaged to give her lessons in singing and on the clavier, in return for which he received free board for three years. At Metastasio's he also made the acquaintance of the aging Kapellmeister Porpora. Porpora was teaching singing to the mistress of the Venetian ambassador, Correr; however, because he was too proper and too fond of his ease to accompany at the piano himself, he delegated this task to our Giuseppe. 'There was no lack of *Ass*, *Blockhead*, *Rascal* and pokes in the ribs, but I willingly put up with it all, for I profited immensely from Porpora in singing, composition and Italian.' In the summer Correr travelled with the lady to the popular bathing resort Mannersdorf . . .; Porpora went as well . . . and took Haydn with him. For three months Haydn served there as Porpora's valet; he ate at Correr's officers' table, and was paid six ducats [*c*25 gulden] a month. From time to time he was required to accompany Porpora on the clavier at one Prince von Hildburghausen's, in the presence of Gluck, Wagenseil and other famous masters; the approval of these connoisseurs was especially encouraging to him.

Access to such personages – whose overlapping relations were as much social as artistic – was essential for an aspiring young musician. 'Fräulein Martinez' was the composer and singer Marianne von Martínez. At the court of Joseph Friedrich, Prince of Sachsen-Hildburghausen (1702–87), Haydn could also have encountered Dittersdorf (whom he certainly knew by the mid-1750s) and Giuseppe Bonno, later Hofkapellmeister.

All these events took place during the first half of the 1750s. Haydn's instruction of Martínez began in 1751 or 1752; presumably his three years with Metastasio were from 1751 to 1754. Porpora arrived in Vienna from Dresden in late 1752 or early 1753; Haydn might well have met him in March 1753, when Metastasio was considering him as composer of his new opera *L'isola disabitata* (which in the event he assigned to Bonno; Haydn himself set this libretto in 1779). Given the mastery of Haydn's music by 1755–6, 1753 or 1754 are the latest plausible dates for his having 'learnt the true fundamentals

of composition' from Porpora, whose expert knowledge of singing and Italian – 'singing' in this context implies Italian opera and oratorio – was also of great importance; Haydn became fluent in Italian and the italianate singing style. In addition, it may well have been at Porpora's instigation that he systematically worked through Fux's *Gradus ad Parnassum* (the only work mentioned by any source that offers 'true fundamentals'). Another important musical encounter was Haydn's discovery of Carl Philipp Emanuel Bach, but this is unlikely to have taken place as early as about 1750, as the biographers claim. Dies portrays Haydn asking for 'a good theoretical textbook'; this can refer only to the second volume of Bach's *Versuch über die wahre Art das Clavier zu spielen*. However, it appeared far too late (1762) to serve the function Dies attributes to it; even Bach's first volume (1753) was apparently not sold in Vienna until the 1760s. Moreover, unlike Fux or Mattheson, neither volume figures in Haydn's library catalogue (1804) or his estate. Indeed Griesinger speaks more plausibly of compositions:

About this time [his move to the Michaelerhaus] Haydn came upon the first six sonatas of Emanuel Bach; 'I did not leave my clavier until I had played them through, and whoever knows me thoroughly must discover that I owe a great deal to Emanuel Bach, that I understood him and studied him with diligence. Emanuel Bach once paid me a compliment on that score himself'.

Although it is unclear which of Bach's sonatas Griesinger meant by 'the first six', there is no doubt of his influence on Haydn as a composer. Again, however, Haydn's style does not reflect that influence until the 1760s.

An important early personal contact was with Joseph Felix von Kurz, a well-known comic actor (under the stage-name Bernardon) and minor impresario active at the Kärntnertortheater, for whom Haydn supplied music to *Der krumme Teufel*, a comedy of the Hanswurst type. It was apparently given its première in the 1751–2 season and revived in May 1753, with considerable success. Neither libretto nor music of this, his earliest stage work, survives; a libretto does survive for a later version of 1759, often called *Der neue krumme Teufel*, but, again, there is no music. It has been speculated that many anonymous numbers in contemporary Viennese collections of theatrical songs stem from this work or others that Haydn might have composed, although documentation is lacking.

Haydn's lot improved substantially in the mid-1750s, as Griesinger describes:

At first Haydn received only two gulden a month for giving lessons, but gradually the price rose to five gulden, so that he was able to look about for more suitable quarters. While he was living in the Seilerstätte, all his few possessions were stolen . . . Haydn soon saw his loss made good by the generosity of good friends . . . [he] recovered through a stay of two months with Baron Fürnberg, which cost him nothing.

A 150% increase in fees implies a rise not only in Haydn's economic status but his professional reputation – and therefore increased access to patronage. The most important figure was Baron Carl Joseph Fürnberg (1720–67), who employed him as music master to his children (he lived near the Seilerstätte), commissioned his first string quartets and eventually recommended him to Morzin. Important as well was the elder Countess Maria Christine Thun, who (according to Framery) took singing and keyboard lessons from Haydn.

His freelance activities continued apace. Griesinger writes:

In this period Haydn was also leader of the orchestra in the convent of the Barmherzige Brüder . . . at 60 gulden a year. Here he had to be in the church at eight o'clock in the morning on Sundays and feast days, at ten o'clock he played the organ in what was then the chapel of Count Haugwitz, and at eleven o'clock he sang at St Stephan's. He was paid 17 kreutzer for each service. In the evenings Haydn often went 'gassatim' with his musical comrades, when one of his compositions was usually performed, and he recalled having composed a quintet [possibly HII:2] for that purpose in 1753.

(Both Griesinger and Dies supply the obligatory comic anecdotes involving Haydn and Dittersdorf.) Griesinger's account conflates several church jobs: from 1754 to 1756 Haydn performed as a singer in the Hofkapelle during Lent (1 gulden per service, not 17 kreuzer), and in 1755 and 1756 as an orchestral violinist for balls during carnival (4 gulden per evening). In the Hofkapelle he sang both concerted and *a cappella* works, including Palestrina's *Stabat mater* and the Allegri *Miserere*. His Sunday job at Count Haugwitz's newly consecrated chapel near the Piaristenkirche began in mid-1759; he was responsible for the entire concerted music. According to an account by a Prussian prisoner of war, he participated in chamber-music parties arranged by Count Harrach at Rohrau. Of Haydn's many students during these years, Martínez has already been mentioned; another of more than marginal importance was Robert Kimmerling, later *regens chori* at Melk.

Although a sizable number of Haydn's works originated during the 1750s, documented dates are few. Both the very early *Missa brevis* in F and the first *Lauda Sion* exhibit technical faults, implying that he composed them before learning the 'true fundamentals' (i.e. before *c*1753–4); such faults are found in no other surviving genuine works. Griesinger writes: 'In addition to performing and teaching, Haydn was indefatigable in composing. Many of his easy clavier sonatas, trios and so on belong to this period, and he generally took into consideration the needs and capacities of his pupils'. Numerous tiny keyboard sonatas and 'concertinos' indeed survive, although some authorities argue that the smallest sonatas are not necessarily the earliest or least accomplished, and the concertinos appear to date from about 1760; possibly some keyboard trios antedate 1755 as well, although none is so short or simple. In any case Haydn's compositional activity increased exponentially in the mid-1750s. The quintet-divertimento HII:2 survives in a later source dated 1754, and many of his ensemble divertimentos probably date from before 1761. Of the ten or so pre-1780 keyboard trios and the 21 or so string trios, the earliest also may date from the mid-1750s, although others are from the early 1760s. Late in life Haydn dated the autographs of the Organ Concerto in C (HXVIII:1) and the *Salve regina* in E (HXXIIIb:1) '1756' (fig.2).

The precise dates of the final two stages of Haydn's early 'progress' – Fürnberg and Morzin – also remain uncertain. Griesinger writes:

The following, purely coincidental circumstance led him to try his hand at the composition of quartets. A certain Baron Fürnberg had an estate in Weinzierl, several stages from Vienna; from time to time he invited his parish priest, his estate manager, and Albrechtsberger (a brother of the well-known contrapuntist) in order to have a little music. Fürnberg asked Haydn to compose something that could be played by these four friends of the art. Haydn, who was then 18, accepted the proposal, and so originated his first quartet [incipit of HIII:1], which, immediately upon its appearance, received such uncommon applause as to encourage him to continue in this genre.

*2. Autograph MS of part of Haydn's 'Salve regina' in E, composed 1756 (D-DS 988, f.2v)*

Griesinger's statement that Haydn composed his first quartet at 18, although roughly supported by Dies and Carpani, is far too early. All the circumstantial details, as well as the sheer mastery of Haydn's early quartets, suggest rather the Seilerstätte period, i.e. about 1755–7. Whether HIII:1 was actually Haydn's first quartet, or whether he (or Griesinger) named it simply because it occupied first position in Pleyel's famous edition (1801) and therefore in his own thematic catalogue, cannot be determined. In any case Haydn had not yet adopted the 'opus' format; there are, simply, ten early quartets, of which HIII:1–4, 6 (op.1 nos.1–4, 6) and HII:6 ('op.0') are probably the earliest, HIII:10, 12 (op.2 nos.4, 6) perhaps in the middle, and HIII:7–8 (op.2 nos.1–2) probably the latest, perhaps even 1759–60.

Regarding Haydn's employ by Count Karl Joseph Franz Morzin (1717–83), Griesinger states:

In the year 1759 Haydn was engaged as music director to Count Morzin in Vienna at a salary of 200 gulden, free lodging and board at the officers' table. Here he was finally able to enjoy the happiness of a carefree existence; he was quite contented. The winters were spent in Vienna, the summers in Bohemia [at Dolní Lukavice, usually referred to as Lukavec]. . . . As music director in the service of Count Morzin Haydn composed his first symphony [incipit of no.1].

Although Dies agrees regarding the date ('about 27'), Haydn's earliest symphony cannot be as late as 1759: a manuscript source for no.37 is dated 1758 (Carpani's date), implying a date of composition in that year or, more likely, at least a year earlier. Moreover, Haydn himself in old age organized a list of his symphonies according to ten-year periods: 1757–67, 1767–77 etc.; '1757' is so precise that he must have believed that it was the actual year of his first symphony – or, perhaps, of his appointment with Morzin. (The list also appears to confirm Griesinger's identification of the symphony we know as 'no.1' as the earliest.) Finally, if one accepts 1749 as the date of Haydn's dismissal from the Stephansdom and takes literally his 'eight whole years' of 'wretched existence', 1757 is implied as end-point; but the most likely marker of the latter, again, was his appointment with Morzin. Be all this as it may, the free-spending Count Morzin soon had to dissolve his little musical establishment. Although the early biographers again disagree as to the date, Haydn's marriage certificate (26 November 1760) refers to him as 'Music Director with Count v. Morzin', so he probably moved from Morzin to Esterházy without meaningful interruption. Haydn's compositions during the Morzin years include about 15 symphonies; keyboard sonatas (including HXVI:6, probably not later than 1760), trios, divertimentos (including HXIV:11, 1760) and concertos; string trios; partitas for wind band (including HII:15, 1760) and possibly the quartets op.2 nos.1–2.

On 26 November 1760 Haydn was married to Maria Anna Aloysia Apollonia Keller (bap. 9 Feb 1729; *d* 20 March 1800); the marriage contract, in which he pledged

1000 gulden as a matching sum to her dowry (a common custom), is dated 9 November. The bride was the daughter of the wigmaker Johann Peter Keller, who is said variously to have assisted him in his years of poverty or employed him as a music teacher. The early biographers relate that in the mid-1750s Haydn had fallen in love with her younger sister Therese (*b* 1733), who however was compelled by her devout parents to enter a nunnery in 1755, taking her formal vows in 1756. It has been speculated that he composed the *Salve regina* in E and perhaps the Organ Concerto in C on the latter occasion. Whether (the speculation continues) out of continuing gratitude to the Kellers or owing to a psychological displacement of his own affections, he married the elder sister four years later. The marriage was an unhappy one (we have only his side of the story) and led to infidelities on both sides; as he said to Griesinger (somewhat illogically): 'My wife was incapable of bearing children, and thus I was less indifferent to the charms of other women'.

3. ESTERHÁZY COURT, 1761–90. With Haydn's move to the Esterházy court, evidence regarding his activities increases a hundredfold. However, its scope is uneven: although the archives are informative regarding theatrical activities, entertainments for noble visitors, personnel, payments for services, petitions etc., they tell us little about day-to-day musical activities, especially in the realm of instrumental music. Many documents and musical sources were destroyed in a fire at Eszterháza castle in 1779, and little correspondence of Haydn's survives until the upswing in his commercial activity beginning in 1780.

*(i) Vice-Kapellmeister, 1761–5.* The Esterházy family, the richest and most influential among the Hungarian nobility, had long been important patrons of culture and the arts; Prince Paul Anton was a music lover and capable performer. Haydn's predecessor as Kapellmeister, Gregor Joseph Werner, had been appointed in 1728; he was a solid professional who composed church music in the first instance, but also symphonies, trio sonatas and other instrumental works including an entertaining 'Musical Calendar' (1748); in 1804 Haydn honoured his predecessor by publishing six introductions and fugues from his oratorios, arranged for string quartet. Paul, who from 1750 to 1752 was ambassador in Naples and travelled widely elsewhere, collected a large quantity of vocal and instrumental music (he had a catalogue made during the period 1759–62; it lists one symphony by Haydn, acquired in 1760). By about 1760 Werner was becoming infirm and his musical orientation increasingly conservative; Paul set about modernizing and enlarging the establishment, appointing several new musicians before recruiting Haydn and others in 1761.

Haydn's appointment was in the first instance as vice-Kapellmeister; the first and last clauses of his contract address this somewhat delicate situation, while at the same time illustrating the Esterházys' concern for the welfare of valued employees:

> . . . Whereas
> 1[mo] a Kapellmeister at Eisenstadt named Gregorius Werner has devoted many years of true and faithful service to the princely house, but now, on account of his great age and the resulting infirmities . . . is not always capable of performing his duties, therefore said Gregorius Werner, in consideration of his long service, shall continue to serve, as Ober-Kapellmeister. On the other hand the said Joseph Haydn, as vice-Kapellmeister, shall be subordinate to . . . said Gregorio Werner, *quà* Ober-Kapellmeister, in regard to the choral music [*Chor-Musique*] in Eisenstadt; but in all other circumstances where any sort of music is to be made, everything pertaining to the music, in general and in particular, is the responsibility of said vice-Kapellmeister.
> 14[mo] His Highness not only undertakes to retain the said Joseph Haydn in service during this period [three years, renewable], but, should he provide complete satisfaction, he shall also have expectations of the position of Oberkapellmeister.

Although the contract is dated 1 May 1761, Haydn may have begun working for the court earlier that year. Griesinger states that he began on 19 March 1760; this cannot be correct, unless it was an error for 1761 (Dies also names 1760), and the specific date '19' is suspect (the surviving contracts begin on the first of the month). But the Prince was in Vienna in March 1761 (music was performed at the Esterházy palace several times that month); indeed he may have remained there much of the time until his death in March 1762. Moreover, the contracts with several musicians appointed 1 April 1761 include a clause requiring them to obey not only the Kapellmeister but the vice-Kapellmeister, but the latter position did not exist until Haydn's appointment. Hence he may well have selected most or all of the musicians hired from April on, and so helped to shape the newly constituted orchestra himself.

Haydn's contract, once thought to be demeaning, is now understood as a standard document of its type; its terms were favourable to a young man of 29 with only one previous position to his credit. He was no servant, but a professional employee or 'house officer'; he received 400 gulden a year, plus various considerations in kind including uniforms and board at the officers' table. He was in charge of the 'Camer-Musique', which comprised not only all instrumental music but secular vocal and stage music as well. He had full authority over the musicians, both professionally and in terms of their behaviour; but he was close to many of them personally as well, often serving as godfather to their children. His duties included responsibility for the musical archives and instruments (including purchase, upkeep and repair), instruction in singing, performing both as leader and as soloist ('because [he] is competent on various instruments') – and, of course, composition:

> 4[to] Whenever His Princely Highness commands, the vice-Kapellmeister is obligated to compose such works of music as His Highness may demand; further not to communicate [such] new compositions to anyone, still less allow them to be copied [for others], but to reserve them entirely and exclusively for His Highness; most of all to compose nothing for any other person without prior knowledge and gracious consent.

Despite the immense labour and considerable tribulation this position entailed, Haydn must have known that it was the opportunity of a lifetime. One can well understand the joy and satisfaction conveyed by Griesinger's remark: 'It was still granted to Haydn's father [*d* 1763] to see his son in the blue and gold uniform of the court, and to hear the prince's many praises of his son's talent'.

Paul Anton, already in uncertain health in 1761, declined rapidly in early 1762 and died on 18 March. Childless, he was succeeded by his brother Nicolaus, an even more enthusiastic musician, who harboured even grander designs for the physical and artistic development of the court. Goethe coined the phrase 'das Esterházysche Feenreich' to describe his display at the coronation of the Holy Roman Emperor in Frankfurt in 1764, which has passed into the literature; in his own day he was called 'der Prachtliebende' ('the Magnificent'). His treatment of Haydn was generous: he raised his salary to 600 gulden,

regularly dispensed gold ducats as thanks for the submission of baryton trios and after successful opera productions and, following fires that destroyed Haydn's house in Eisenstadt in 1768 and 1776, paid to have it rebuilt. As a matter of course his musical taste decisively influenced what genres Haydn cultivated at court; whether it affected Haydn's style as well cannot be determined (except in cases like the works for baryton).

The musical ensemble was at first very small, normally comprising 13 to 15 players (of whom many performed on more than one instrument): strings (approximately 6 violins, 1 viola, 1 cello, 1 bass), 2 oboes, 2 horns and a bassoon (plus a flute in certain works or movements). Haydn led from the violin; no keyboard continuo was employed except in the theatre. Beginning in the 1770s, the ensemble was gradually enlarged, owing primarily to the increasing importance of the court opera; at its height in the 1780s it counted 22–4 members. Especially at first, it was manned largely by virtuosos (including Luigi Tomasini, violin, Joseph Weigl and later Anton Kraft, cello, Carl Franz, horn and baryton), some of whom remained at the court for decades. This situation is reflected in many difficult and exposed passages in Haydn's symphonies, as well as numerous concertos from the 1760s. Indeed symphonies nos.6–8, *Le matin*, *Le midi* and *Le soir* (1761) – among his first compositions in his new position; Dies states that the 'times of day' topic was suggested by the prince – were expressly calculated to show off the new ensemble, both as a whole and in terms of the individual players, all of whom receive solos. But Haydn was also demonstrating his own prowess: although the topics were traditional, the works have no precedent, either generally or in his own output.

During the first half of the 1760s Haydn composed chiefly instrumental music, as far as we know exclusively for performance at court. His most productive genre was the symphony, with about 25 works; in addition to nos.6–8 they include nos.22 ('The Philosopher') and 30 and 31 ('Alleluja', 'Hornsignal'). The concertos include two or three for violin, the Cello Concerto in C, a concerto for violone (the first ever composed, as far as is known), two horn concertos and one for two horns, one for flute and perhaps one for bassoon; many of them are lost. Only a few keyboard works are known, primarily trios and quartet divertimentos; there are also a few ensemble divertimentos as well as minuets and other dances. In addition, there were a few large-scale vocal works, usually intended as celebrations of particular occasions: the *festa teatrale Acide* (1762, first performed in January 1763, for the marriage of Anton, the prince's eldest son) and the somewhat mysterious *commedia Marchese* (*La marchesa Nespola*, 1762–3; only fragments survive, and three similar works are lost), as well as several cantatas honouring Nicolaus himself, whether on his nameday (*Destatevi o miei fidi*, 1763; *Qual dubbio ormai*, 1764), his return from distant journeys (*Da qual gioia improvvisa*, 1764, from Frankfurt; *Al tuo arrivo felice*, 1767, from Paris) or his convalescence from illness (*Dei clementi*, undated). The only sacred vocal work of consequence is the first of Haydn's two *Te Deum* settings (HXXIIIc:1).

We know little of Haydn's daily routine or that of the musical establishment during these years, or of noteworthy events in his life. His contract required him to appear every morning and afternoon to see if music was desired, although a later document specified that academies were to be given regularly on Tuesdays and Thursdays. From 1762 to 1765 Nicolaus lived primarily in Eisenstadt, with frequent shorter stays at other properties. Haydn and his wife lived in an apartment in the same building as the other musicians, next to the 'Bergkirche', just up the hill from the castle. He was seriously ill in the winter of 1764–5; the following year his brother Johann was engaged, nominally as a tenor but *de facto* charitably supported by Haydn.

*(ii) Kapellmeister, 1766–90.* In late 1765 and early 1766 Haydn's status and activities at the Esterházy court changed radically. First came a series of crises in his relations with the prince. In September 1765 the flautist Franz Sigl accidentally burnt down a house; the chief court administrator, Ludwig Peter Rahier (with whom Haydn often clashed), recommended that Sigl be imprisoned, and Haydn was reprimanded by the prince. Haydn however eloquently defended himself and succeeded in having Sigl's punishment reduced to simple dismissal (indeed he was later rehired). In October, Werner, having just signed his last will, wrote a vituperative letter to the prince in which he accused Haydn of neglecting the instruments and musical archives and the supervision of the singers. In late November or early December Nicolaus again sent Haydn a reprimand (perhaps drafted by Rahier), instructing him to see to these matters and to prepare a catalogue of the archives and instruments of the Chor-Musique. At the end stood the following postscript: 'Kapellmeister Haydn is urgently enjoined to apply himself to composition more zealously than heretofore, and especially to compose more pieces that one can play on the [baryton]'. The baryton was a member of the viol family, on which the performer could 'accompany himself' by plucking a series of sympathetically vibrating strings while also playing normally with the bow; the prince was an accomplished performer. Haydn, though doubtless angry and dismayed, at once began to compose baryton trios in quantity. On 4 January 1766 he submitted three new ones (Nicolaus pronounced himself satisfied and awarded him 12 ducats, while immediately ordering six more), and completed a 'book' of 24 (they were elegantly bound in sets) that autumn; two additional books followed by July 1768. Thereafter production dropped off somewhat, though remaining steady into the mid-1770s, for a total of 126 trios plus sundry other works.

A different kind of response (so it is assumed) was Haydn's decision to begin a thematic catalogue of his own compositions, and thereby to refute the prince's charge of non-productivity. This document, misleadingly called the *Entwurf-Katalog* ('draft catalogue', fig.3), is of capital importance for our knowledge of Haydn's output from the pre-Esterházy days up to the late 1770s, as well as its chronology. It was laid out in about 1765–6 by Joseph Elssler, the most important music copyist at the court, doubtless according to Haydn's plan; Haydn made additional entries more or less regularly until the late 1770s.

On 3 March 1766 Werner died; Haydn was now Kapellmeister, responsible for the church music as well as everything else. It was presumably this higher status (his salary did not change) that induced him in May to purchase a house in Eisenstadt (now a Haydn museum). A more important change was signalled later that year: a portion of the court, including Haydn and some musicians, spent the summer at Nicolaus's splendid new castle,

*3. Page from Haydn's 'Entwurf-Katalog', begun in 1765 (D-Bsb)*

Eszterháza, then beginning to rise in reclaimed swampland east of Lake Neusiedl (present-day Hungary). Over time, the prince became increasingly attached to it, and 'summer' eventually expanded to ten months. Such an extension occasioned the 'Farewell' Symphony (no.45, autumn 1772), in which the pantomime of the departing musicians brought home to the prince the need to return to Eisenstadt.

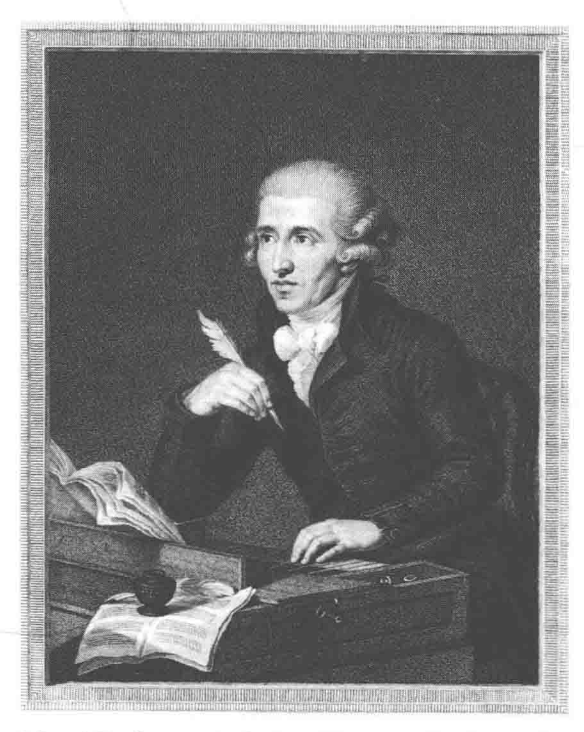
As a result of these new circumstances, Haydn's compositional activity changed substantially. In addition to the upsurge in baryton music, in 1766 he began to compose large-scale vocal works, both sacred and secular. In the former domain he at once produced two works on the largest scale, with an astonishing assurance of style and technique for someone who had composed no church music for a decade. The first was the *Missa Cellensis in honorem BVM* of 1766 (possibly completed later), apparently intended for Mariazell (where earlier Esterházys had erected a chapel) or a Viennese church associated with that shrine. More masses followed: in 1768 the *Missa 'Sunt bona mixta malis'*, about 1768–9 the *Missa in honorem BVM* ('Great Organ Mass'; Haydn presumably performed the obbligato organ part), in 1772 the *Missa Sancti Nicolai* (the title implies a celebration of the prince's nameday, 6 December) and about 1775–8 a *missa brevis* ('Little Organ Mass'). His other 'inaugural' liturgical masterpiece was the *Stabat mater* of 1767. Its original purpose is unknown; Haydn was confident enough to send it to Hasse, earning a letter of praise that he much valued, and he performed it in Vienna in March

1768. There followed a *Salve regina* (HXXIIIb:2; 1771) for four solo voices, string orchestra and obbligato organ (again performed by Haydn). It was presumably this work, not (as he later claimed) the *Stabat mater*, that resulted from his vow to compose a work of thanksgiving to the Virgin if he were cured of a serious illness; he suffered from a 'raging fever' (Griesinger) about 1770–71, so threatening that his brother applied for leave from Salzburg to visit him. The celebratory cantata *Applausus* (1768) was commissioned in honour of the abbot of the Cistercian monastery at Zwettl; because Haydn was unable to be present, he accompanied the work with a long and informative letter on performing practice. Haydn composed the Italian oratorio *Il ritorno di Tobia* (1774–5) for the annual Lenten concert of the Tonkünstler-Societät in Vienna, a charitable organization for musicians' widows and children founded by Hofkapellmeister Gassmann in 1771. He conducted the premières on 2 and 4 April 1775; most of the roles were sung by members of his own Kapelle. The work was a notable success; a review praised the choruses in particular and referred to his growing international reputation.

Beginning in 1766, the prince began to require operatic productions at the new castle; eventually opera would become the focus of the entire musical establishment (see §(iii) below). For the time being, however, Haydn's primary task was to compose operas to be produced during the festivities celebrating visits by high personages. Three comic operas date from the late 1760s: *La canterina* (1766) apparently had its première in the summer during a visit of the imperial court to Eisenstadt (in a makeshift theatre) and was afterwards produced in Pressburg (Bratislava). *Lo speziale* (1768) and *Le pescatrici* (1769–70) are both based on librettos by Goldoni; the former inaugurated the new opera house at Eszterháza probably during the last week of September 1768, on the visit of the Hungarian regent, Duke Albert of Saxe-Techsen, while the latter had its première on 16 September 1770 during the wedding celebrations of Countess Lamberg, the prince's niece. After a pause, operatic composition resumed in 1773 with *L'infedeltà delusa*, given on 26 July (the nameday of the dowager Princess Maria Anna, Paul Anton's widow), and *Philemon und Baucis*, a German marionette opera, given on 2 September during the festivities in honour of a 'state' visit by Empress Maria Theresa to Eszterháza. (*Hexenschabbas*, another marionette opera from about this time, is lost.) *L'infedeltà delusa* was also given for the empress; the performance occasioned her famous remark (if it is genuine) that in order to see a good opera she had to go to the country. Haydn's last opera during this phase was *L'incontro improvviso*, first given on 29 August 1775, during a visit by Archduke Ferdinand and his court.

During the late 1760s and early 1770s Haydn continued to compose instrumental works, albeit at a slower rate than before (except during the operatic hiatus of 1770–72). But they became longer, more passionate and more daring. The symphonies comprise nos.26, 35, 38, 41–9, 52, 58–9, 65; many of these are among his best-known before the London period, as is evident from their nicknames, which include 'Lamentatione', 'Maria Theresa', 'La passione', 'Mourning', 'Farewell' and 'The Schoolmaster'. He also took up the string quartet, not cultivated since the 1750s, producing three increasingly imposing *opera* in rapid succession: op.9 (*c*1769–70), op.17 (1771) and op.20 (1772). The reason is unknown: there is no documentation of quartet performances at the Esterházy court, and it has been speculated that he composed them for Viennese patrons (Burney described the audience's transports at a performance of Haydn quartets in Vienna in September 1772). He also composed numerous keyboard sonatas for connoisseurs: HXVI:45 (1766), 19 (1767), 46 (late 1760s), 20 (in C minor, 1771), as well as seven lost works and one that survives only as a fragment (HXVI:2a–g, XIV:5) which, to judge from the incipits, were on the same scale. A few concertos date from this period as well. Many of these works are so bold and expressive that in the 20th century they became subsumed under the appellation *Sturm und Drang*. The term has been criticized: taken from the title of a play of 1776 by Maximilian Klinger, it properly pertains to a literary movement of the middle and late 1770s rather than a musical one of about 1768–72, and early proponents of this interpretation assumed implausibly and without evidence that these works expressed a 'romantic crisis' in Haydn's life. Nevertheless, his style during these years was distinctive; furthermore, similar traits are found in the contemporary music of many other Austrian composers, including the young Mozart's G minor Symphony K183/173*dB* and D minor String Quartet K173.

In Haydn's case this development may have been related to his turn to vocal music beginning in 1766: perhaps the demand for expressive depth in sacred works and dramatic effectiveness in opera, as well as the tendency towards through-composition in both genres, stimulated this expansion of his instrumental music. In 1769 Nicolaus began engaging a theatrical troupe each summer season; in the seasons 1772–7 it was the famous one directed by Carl Wahr, which played primarily comedies and other entertainments, although Shakespeare's tragedies were also mounted. It has been speculated that Haydn supplied incidental music for these productions (including even *Hamlet* and *King Lear*) and that some *Sturm und Drang* symphonies recycle this music, although the only documented example is Symphony no.60 ('Il distratto', 1774), from a very un-Shakespearean French comedy. In any case, from about 1773 Haydn's instrumental music became generally lighter in style – the reason (if any) is again unknown; there is no evidence of princely intervention – and was again addressed to amateurs as well as connoisseurs. The string quartet was abandoned. Both the symphonies of 1773–5 (nos.50–51, 54–7, 60, 64, 66–9) and two contemporaneous sets of keyboard sonatas, HXVI:21–6 (1773) and especially 27–32 (1774–6), exemplify this mixed orientation; the former was published in Vienna in 1774 (the first authorized publication of Haydn's music) with a dedication to the prince, who presumably paid the costs. A third set (nos.35–9 and 20), again mixed in style, was published in 1780.



*(iii) Opera impresario, 1776–90.* In 1778 Haydn sold his house in Eisenstadt; the court now stayed at Eszterháza at least ten months every year, and he increasingly spent the short winter season in Vienna (see §3(iv)). The very long stays at Eszterháza were linked to Nicolaus's reorganization of the theatrical entertainment there in 1776. Now there was a regular 'season' each year, comprising opera, stage plays and marionette operas (in a separate small theatre); in principle there was theatrical entertainment every evening the prince was in residence.

At first, stage plays predominated (184 evenings in 1778, as opposed to only 50 operas – and only two musical academies; four others took place during the day, in the 'apartments'), but the number of opera evenings increased steadily, reaching a high of 124 or 125 in 1786. New productions were henceforth not grand, 'occasional' events, but a regular occurrence; in 1776 there were five, and in the banner year 1786 there were eight, together with nine revivals. Under these conditions Haydn could not compose more than a small fraction of what was needed, nor were new works commissioned from other composers. Instead, operas were acquired from Vienna, where there were many productions and a lively trade in copying; it is not known how many were selected by the prince or Haydn during their brief winter sojourns. Some were acquired by agents (e.g. Nunziato Porta, the librettist of *Orlando paladino*), others supplied by newly arrived singers etc., and still others purchased from archives and estates (Dittersdorf sold the court several of his own operas in 1776). The up-to-date repertory centred on *opera buffa*: the composer represented by the greatest number of productions from 1776 to 1790 was Cimarosa (13), followed in order by Anfossi, Paisiello, Sarti and Haydn (seven), and 24 other composers with fewer.

Once it was decided to produce a given opera, Haydn was responsible for any musical alterations that might be required, supervising the copying of parts, rehearsing the singers and orchestra, and conducting all the performances – for no fewer than 88 productions in the 15 years from 1776 to 1790. This was by any reckoning a full-time job, even if one does not count his own new stage works, of which six originated between 1777 and 1783, or almost one per year. First came a *dramma giocoso* by Goldoni, *Il mondo della luna* (given on 3 August 1777, on the marriage of Nicolaus's younger son). *La vera costanza* (1778–9) is the subject of implausible and conflicting anecdotes in Griesinger and Dies, according to which it was originally commissioned for the Burgtheater in Vienna but scuttled by intrigue (neither Joseph II nor his musicians were well-disposed towards Haydn); in fact it had its première at Eszterháza, on 25 April 1779. It was lost in the fire that largely destroyed the Eszterháza opera theatre on 18 November 1779; the surviving version represents Haydn's reconstruction of the work from 1785. It is a measure of the prince's commitment (or obsession) that an opera was given just three days after the fire, in the marionette theatre, which had been hastily adapted for staged opera (yet another noble marriage was to be celebrated). Haydn's *L'isola disabitata* to a libretto by Metastasio also had its première on schedule on 6 December (the prince's nameday). Next came *La fedeltà premiata* (1780; given on 25 February 1781, on the inauguration of the rebuilt opera house). In 1783 Haydn took the unusual step of publishing the great *scena* for Celia in Act 2, 'Ah, come il core ... Ombra del caro bene', in full score; it received a detailed and laudatory review by C.F. Cramer in his *Magazin der Musik*. Haydn's last two Eszterháza operas were *Orlando paladino* (1782, for the prince's nameday) and *Armida* (1783; given 26 February 1784). The later 1770s saw three German marionette operas, also all lost in the 1779 fire: *Dido* (1776), *Vom abgebrannten Haus* (date uncertain) and *Die bestrafte Rachbegierde* (1779; its production can be inferred only from the printed libretto); the occasionally seen *Die Feuersbrunst* is either spurious or represents an arrangement of *Vom abgebrannten Haus*.

After 1783 Haydn composed no more operas for the court. It is not known why he abandoned the genre, which he had cultivated intensively since 1766 and in which he was proud of his achievements (see §6 below), or how he persuaded the prince to consent at a time when the number of productions was still rising. Perhaps he was increasingly drawn to his new career as composer of instrumental music for publication (see §(iv) below). In any case all his other duties for the court theatre remained in force; in particular he still revised the operas in production to suit his provincial stage and limited personnel. Haydn made many cuts, both of entire numbers and within them, re-orchestrated (often adding winds), changed tempos (usually speeding them up) and 'tailored' arias to 'fit' his singers, as Mozart would have said. He composed about 20 substitute ('insertion') arias (HXXIVb) as well as long passages within numbers not rejected as a whole.

The majority of the insertion arias and simplifications were composed for Luigia Polzelli, a young Italian mezzo-soprano who joined the troupe in March 1779 along with her much older husband, a violinist. Both proved inadequate and were dismissed in December 1780 – but promptly rehired: Luigia and Haydn had become lovers, a relationship that, like so many in that milieu, was probably an open secret. (Haydn told Griesinger that the painter Ludwig Guttenbrunn had been his wife's lover during his stay at the court in 1770–72.) While at Eszterháza Luigia gave birth to her second son, Antonio, in 1783. He and his mother believed that Haydn was the father (there is no evidence of such a belief on Haydn's part); he became a professional musician and was

*4. Joseph Haydn: engraving by Luigi Schiavonetti after the second version of a portrait by Ludwig Guttenbrunn, c1792; the first version of the portrait probably dates from c1770*

appointed to the Esterházy orchestra in 1803. Haydn was well-disposed towards him, and even more towards his elder brother Pietro (*b* 1777); he taught them both music and maintained contact with them throughout his life. As for Luigia, following the dissolution of the Kapelle in 1790 Haydn attempted to procure engagements for her in Italy; however, he would not have her with him in London, even though her sister was engaged there as a singer (see §4 below). Although there are no letters from the 1780s by which we might assess the nature of their feelings, he wrote to her often (in Italian) during his first London visit. Those up to early spring 1792 are ardent: 'Perhaps I shall never regain the good humour that I used to have with you; you are always in my heart, and I shall never, never forget you . . . Think from time to time about your Haydn, who esteems you and loves you tenderly, and will always be faithful to you' (14 January). But those from May and June are notably cooler – he had entered a new relationship – and none survives from his second London visit. He acceded to Polzelli's requests for money, but not always immediately or in the demanded amount, while complaining (misleadingly) how little he had, as well as (accurately) how hard he had to work.

The vastly increased operatic and theatrical activity at the Esterházy court from 1776 on led to an equally drastic reduction in the performance of instrumental music. As noted above, only six 'academies' were listed for the entire year 1778 (all in January and February). Presumably the prince simply lost interest; even Haydn's stream of baryton works began to dry up after 1773 and ceased entirely about 1775, following the octets HX:1–6. The symphony, from the late 1750s to 1775 the one constant in Haydn's output, declined as well; only nine were completed in the six years 1776–81 (nos.53, 61–3, 70–71, 73–5), none at all in 1777 or the first half of 1778. Even these few symphonies often include adaptations of stage music. No.63 in C begins with the overture to *Il mondo della luna*, and the slow movement ('La Roxelane') is based on a theme from a stage play; the slow movement of no.73, 'La chasse', uses his own lied *Gegenliebe* and the finale recycles the overture to *La fedeltà premiata*. He even recycled the overture HIa:7 twice, in the finale of one version of no.53 ('Imperial') and the opening movement of no.62. From this time on, the Esterházy court was no longer the primary destination for Haydn's instrumental music.

*(iv) Independence, 1779–90.* Nevertheless, Haydn was able to continue his career as an instrumental composer. In contrast to London, Paris and elsewhere, where unauthorized editions of his music had been appearing steadily since 1764, there was no music publishing industry to speak of in the Habsburg realm; most music circulated in manuscript copies. This situation changed in 1778, when Artaria & Co., hitherto primarily art dealers and mapmakers, expanded into music printing; other firms soon followed. Artaria and Haydn must have made contact in 1779 (it is not known who took the initiative); their first publication was a set of six keyboard sonatas, HXVI:35–9, 20 (delivered in winter 1779–80, published in April 1780), dedicated to the virtuoso sisters Katharina and Marianna von Auenbrugger. Dozens of Viennese publications of Haydn's music followed over the next decade. This would not have been possible on the terms of his 1761 contract, which forbade him from selling music on his own or composing for anyone else without permission. However, he signed a new contract on New Year's Day 1779, in which these prohibitions were omitted; the conjunction with Artaria's founding in 1778 and Haydn's publication of music with them beginning in 1779–80 cannot be coincidental. The prince was losing interest in instrumental music; Haydn must have persuaded him to strike a compromise, whereby he remained in residence at court, continued in charge of the opera and drew his full salary, but was granted compositional independence in other respects, including the income from sales of his music. In addition, he began to market his music in other countries: in England beginning in 1781 with Forster, to whom he sold more music than to anyone except Artaria; in France beginning in 1783, selling Symphonies nos.76–8 (composed 1782) to Boyer and offering nos.79–81 (1783–4) to Naderman. (To be sure, certain works not composed for the court – for example, the 'Paris' Symphonies – were still performed, or at any rate tried out, there before being sent into the world, and others, such as the piano sonatas HXVI:40–42, were dedicated to members of the princely family.)

Haydn soon learnt to maximize his income by selling a given work in several countries, accepting a separate fee for each. Except in Vienna and London he often worked through a middleman. These activities were in many respects unregulated (modern copyright law being in its infancy); unauthorized 'double copying' was a constant danger, and everyone attempted to maximize his advantage – including Haydn, whose tactics were often unscrupulous, to say the least. He often earned his 'little extra' by selling manuscript copies of new works to private individuals; such 'subscription' copies still carried a certain prestige. An example is offered by his famous letters offering the string quartets op.33, composed in summer and autumn 1781 and sold to Artaria by prior arrangement. On 3 December he wrote to between ten and 20 noble and well-to-do music lovers, including the Swiss intellectual Johann Caspar Lavater:

> I love and happily read your works . . . Since I know that in Zürich and Winterthur there are many gentlemen amateurs and great connoisseurs and patrons of music, I cannot conceal from you the fact that I am issuing a work consisting of 6 Quartets for two violins, viola and violoncello concertante, by subscription for the price of six ducats; they are of a new and entirely special kind, for I haven't written any for ten years . . . Subscribers who live abroad will receive them before I issue the works here . . .

However, Artaria (who presumably knew nothing of these activities) announced the forthcoming publication of the quartets on 29 December at a price of 4 gulden (6 ducats equalled approximately 25 gulden). Haydn was furious:

> It was with astonishment that I read . . . that you intend to publish my quartets in four weeks . . . Such a proceeding places me in a most dishonourable position and is very damaging; it is a most extortionate step on your part . . . Mr Hummel [the publisher] also wanted to be a subscriber, but I did not want to behave so shabbily, and I did not send them to Berlin solely out of regard for our friendship and further transactions; by God! you owe me more than 50 ducats, since I have not yet satisfied many of the subscribers, and cannot possibly send copies to those living abroad; this step must cause the cessation of further transactions between us.

In fact, it did not come to a rupture: Artaria delayed publication until April, and Haydn apparently sold the quartets to Hummel after all; both parties now better understood the ground rules ('the next time', wrote Haydn later, 'we shall both be more prudent'). A loss of 50 ducats implies about eight unsold copies; in 1784 Haydn

claimed to Artaria that he had 'always received more than 100 ducats through subscriptions to my quartets'. Even as his publications increased, Haydn continued to market manuscript copies, especially in genres that were not ordinarily published (such as sacred vocal music), and to sell all sorts of music in places where there was still no music publishing industry, notably Spain. These were hardly ever new works. To be sure, he wrote to Artaria in 1784: 'The quartets I'm working on just now . . . are very small and with only three movements; they are destined for Spain', but no trace of such works survives, unless it be the small-scale (but four-movement) single quartet op.42 (1785), which, however, appears to have been composed for a periodical series published by Hoffmeister.

Another risk arose from the circumstance that many publishers sold works from their own catalogues to business partners in other markets. Forster naturally assumed he had exclusive rights in England to the works Haydn had sold him. However, when Artaria sold some of the same works to Longman & Broderip, two ostensibly authorized editions were suddenly in direct competition. To make matters worse, among the works Haydn sold Forster was a set of piano trios HXV:3–5, the first two of which were almost certainly compositions of his former pupil Pleyel. Later, Pleyel sold them to Longman & Broderip; when the latter edition appeared, Forster embarked on a lawsuit with Longman, in which Haydn became entangled when he went to England; it was settled out of court. Despite such difficulties, his methods of exploiting multiple markets became a model for the next two generations of composers; he 'taught' it to Beethoven (who learnt his lesson well, including the unscrupulous aspects), and it was still used by Mendelssohn and Chopin. He was also adept at 'marketing'. He described Symphonies nos.76–8 as 'beautiful, impressive and above all not very long symphonies . . . and in particular everything very easy', and his first authorized Viennese publication of orchestral music (late 1782) was devoted, not to symphonies, but to the 'easier' genre of the overture.

For all these reasons Haydn's compositional activity underwent a radical change in the 1780s. His music, which been well known and much praised since the mid-1760s, was now genuinely popular: he could scarcely keep up with the demand. He concentrated on what was salable: instrumental works that would appeal to both amateurs and connoisseurs, opera excerpts and lieder. As long as his works had been destined for the court or published without his participation, he had had little need to follow the 'opus' principle; now he adopted it for almost all his publications. Even the string quartet was subject to another pause of six years (and the example of Mozart's quartets dedicated to him) before he composed three sets in rapid succession during 1787–90: op.50 (Artaria; dedicated to the King of Prussia), op.54/55 (a single set of six, sold to Johann Tost, formerly a violinist at court, who resold them to various publishers) and op.64. The English publisher John Bland visited him at Eszterháza in November 1789, when Haydn promised him a new quartet in return for a new razor (Haydn thanked him for the razors in April 1790). However, a 'new' quartet could not have been the one now known as the 'Razor' (op.55 no.2, composed in 1788 and never published by Bland); it is more likely that the story has to do with op.64 (1790), which Bland did publish in an authorized edition.

A genre that Haydn had not cultivated since the mid-1760s but which now again became important was the piano trio, with 13 works in the 1780s. HXV:5 (1784) and 9–10 (1785) were sold to Forster; nos.6–8 (1784–5) and 11–13 (1788–9) to Artaria, as was no.14 (1789–90). Nos.15–17 (1790) were composed for Bland; they specify a flute rather than a violin as the melody instrument (no.17: flute or violin). The piano sonatas nos.33, 34 and 43 were assembled *post facto* and published in 1783; by contrast, nos.40–42 are an 'opus' (published 1784; dedicated to Marie Hermenegild, wife of the later Prince Nicolaus II). Two important single sonatas date from 1789–90: HXVI:48 in C, composed for Breitkopf in Leipzig, and HXVI:49 in E♭, for Maria Anna von Genzinger; the Capriccio HXVII:4, composed 'in a *launige* hour' in 1789, is equally fine. Another genre made newly popular through publication was the lied; Haydn composed 24 in 1781–4 (HXXVIa:1–24) and published them with Artaria in two sets of 12.

Even in the early 1780s Haydn was no mere 'entertainer'. But a newly serious orientation was instigated by his receipt in about 1784–5 of two prestigious commissions from abroad, both executed in 1785–6. Six symphonies were commissioned by Count d'Ogny for performance in Paris by the Concert de la Loge Olympique (a masonic organization); the fee was later reported to have been 25 louis d'or for each symphony (Mozart had been paid only 5 for the Paris Symphony K297/300*a*) and Haydn received also 5 louis d'or from Imbault for the publication rights. The Concert employed a much larger orchestra than any for which he had composed symphonies; whether for this reason or simply owing to the notion of 'Paris', they are the grandest he had yet written. They were immensely popular; Marie Antoinette supposedly preferred no.85 in B♭, whence its nickname 'La reine'; compare 'L'ours' (no.82) and 'La poule' (no.83). Their success led to additional symphonies: Haydn sold nos.88–9 (1787) to Tost, who resold them in Paris and elsewhere, and d'Ogny commissioned nos.90–92 (1788–9).

The other commission was a highly unusual one from Cádiz, for a series of orchestral pieces on the last words of Christ, to be performed in a darkened church as a kind of Passion during Holy Week, presumably on Good Friday. Haydn described them to Forster as

> purely instrumental music divided into seven Sonatas, each Sonata lasting seven or eight minutes, together with an opening Introduction and concluding with a *Terremoto* or Earthquake. These Sonatas are composed on, and appropriate to, the Words that Christ our Saviour spoke on the Cross. . . .
>
> Each Sonata, or rather each setting of the text, is expressed only by instrumental music, but in such a way that it creates the most profound impression on even the most inexperienced listener.

Griesinger commented: 'Haydn often stated that this work was one of his most successful'. It was widely performed and favourably received, not least owing to its avoidance of what were taken to be the chief dangers of tone-painting, excessive literalness and triviality. Haydn also sold the *Seven Last Words* in arrangements, one for string quartet and one for keyboard.

A distinctly lighter series of commissions came from King Ferdinando IV of Naples. Like Prince Esterházy, he had become proficient on an out-of-the-way instrument: the *lira organizzata*, a sort of grown-up hurdy-gurdy. He commissioned concertos and 'notturnos' for two *lire organizzate* from various composers; Haydn supplied five

or six concertos (HVIIh, 1786–7) and eight notturnos (HII:25–32, 1789–90).

Haydn's stays in Vienna were still restricted to one or two months each winter and occasional brief visits during Lent. He increasingly valued the imperial capital's artistic and intellectual life, which was flourishing under Joseph II, and chafed at having to spend so much time in the 'wasteland' (*Einöde*) of Eszterháza. He acquired many friends and patrons, including Baron Gottfried van Swieten (whom he had met in 1775), Councillor Franz Sales von Greiner (1730–98; father of the later Caroline Pichler), who presided over Vienna's leading literary salon and supplied Haydn with lieder texts, Anton Liebe von Kreutzner, who in 1781–2 commissioned the *Mariazellermesse* and to whose daughter Haydn dedicated his lieder published in 1781, Councillor Franz Bernhard von Keess, who held regular concerts of orchestral music and made the first systematic attempt to collect all of Haydn's symphonies, and Michael Puchberg (Mozart's patron). Their orientation, reflecting that of the emperor, was enlightened-conservative: they were interested in literature, philosophy and education and largely rejected dogmatism, yet retained a traditional and Catholic outlook – all traits that Haydn shared. The majority were freemasons; Nicolaus himself was Master of Ceremonies at one Viennese lodge, and it was most probably he or others in this circle who induced Haydn to apply for membership in the order. Haydn did so on 29 December 1784 and was inducted into the lodge 'Zur wahren Eintracht' on 11 February 1785; however, there are no further records of his participation, and (despite one further letter) it appears that freemasonry was of no particular significance to him.

Haydn's visits to Vienna offered many opportunities for performances of his music. The string quartets op.33 are still sometimes called the 'Russian' quartets, owing to a dedication on a late edition that reflects a performance given on Christmas Day 1781 for Grand Duke Paul of Russia (later Tsar Paul I) and his music-loving consort. Regarding his lieder, Haydn told Artaria: 'I will sing them myself, in the best houses. A master must see to his rights by his presence and by correct performance'. In February 1779 the Tonkünstler-Societät had invited Haydn to join, but attached conditions not to his liking; he gruffly refused. In March 1784, however, he produced *Il ritorno di Tobia* for them in a revised version. The 'tightness' of the Viennese performing scene is evident from the fact that among the five soloists were four who had taken part (or would do so) in Mozart opera premières:

| | |
|---|---|
| Anna | Nancy Storace (*Figaro*, Susanna) |
| Raffaelle | Catarina Cavalieri (*Entführung*, Konstanze) |
| Tobia | Valentin Adamberger (*Entführung*, Belmonte) |
| Tobit | Stefano Mandini (*Figaro*, Count Almaviva) |

Haydn and Storace became warm friends; he later composed a cantata 'for the voice of my dear Storace' (possibly *Miseri noi*, HXXIVa:7). In January 1787 three of the 'Paris' symphonies were performed, and in March the *Seven Last Words* at the Palais Auersperg; both were unpublished novelties at the time.

The friendship between Haydn and Mozart also developed in Vienna. It is believed that they first met in 1783–4, at a performance such as that of *Tobia* just described, one of Mozart's 'academies', or at a quartet party: Michael Kelly's (late and perhaps untrustworthy) reminiscence of Stephen Storace's quartet comprising Haydn, Dittersdorf, Mozart and Vanhal is set in 1784 (Kelly later visited Haydn at the Esterházy court). Mozart performed his six new quartets for 'my dear friend Haydn and other good friends' on 15 January 1785, and the last three again on 12 February; the latter occasioned Haydn's famous remark to Leopold Mozart that Wolfgang was the greatest composer he knew, 'either by name or reputation'. And Mozart's dedicatory letter in Artaria's edition of the quartets (September 1785) is headed: 'To my dear friend Haydn'. In the winter of 1789–90 he invited Haydn to rehearsals of *Così fan tutte*, and Haydn organized a quartet party in which Mozart's participation can be inferred.

The nature of their relationship has been much discussed. Many writers have romanticized it, beginning with Griesinger's and Dies's sentimental accounts of their tearful farewell in December 1790 on Haydn's departure for London (including Haydn's alleged comment, 'My language is understood in the entire world'). Others are sceptical, noting that the surviving documentation derives solely from two winters, 1784–5 and 1789–90, and that Mozart's dedicatory letter may protest his friendship a little too much. But there is no doubt of their mutual admiration as composers: each acknowledged the other as his only peer and as the only meaningful influence on his own music in the 1780s. Mozart's dedication of quartets to Haydn – a mere composer rather than a rich or noble patron – was unusual (although cynics note that he might have attempted to recruit the latter, but failed), and Griesinger relates an anecdote according to which he defended Haydn against a stupid criticism by Kozeluch: 'neither you nor I would have hit on that idea'. But Haydn's expressions of admiration went further. In a famous (albeit unauthenticated) letter of 1787 to the impresario Franz Rott in Prague, he admitted that he feared comparison with 'the great Mozart', at least on the stage:

> If only I could impress Mozart's inimitable works on the soul of every friend of music, and the souls of high personages in particular, as deeply, with the same musical understanding and with the same deep feeling, as I understand and feel them, the nations would vie with each other to possess such a jewel.

In early 1792 he wrote to Puchberg: 'I was quite beside myself for some time over [Mozart's] death and could not believe that Providence would transport so irreplaceable a man to the other world', adding that he had offered to teach Mozart's son Karl without fee (something he did not do lightly). 'I have often been flattered by my friends with having some genius', he said in Burney's hearing, 'but he was much my superior'. It is remarkable that his feelings were apparently marked neither by jealousy nor a compromise of his musical self-confidence, except possibly regarding opera; they had no effect on his productivity.

In any case it was a friend of a different sort whom Haydn most cherished around 1790: Maria Anna von Genzinger (1750–93), the wife of an important physician (whose clients included Nicolaus Esterházy) and a talented amateur pianist. In June 1789 she sent Haydn her piano arrangement of the slow movement of an unidentified composition; he responded with praise, and the relationship rapidly became intense, although as far as can be told it remained platonic. Haydn's letters to Mme Genzinger (fig.5) are his most fervent and intimate; that

*5. Part of an autograph letter (9 February 1790) from Haydn to Maria Anna von Genzinger (A-Wn Cod.14.300, f.15v)*

of 9 February 1790, following his sudden return from Vienna to Eszterháza, is at once poignant and amusing:

> Here I sit in my wilderness – forsaken – like a poor waif – almost without human society – sad – full of the memories of past glorious days – yes! past, alas! – and who knows if those days will return again? Those wonderful parties? – where the whole circle is one heart, one soul – all the beautiful musical evenings? . . . For three days I didn't know if I was Kapellmeister or Kapell-servant. Nothing could console me, my whole house was in confusion, my pianoforte, which I usually love, was perverse and disobedient . . . I could sleep only a little, even my dreams persecuted me; and then, just when I was happily dreaming that I was listening to *Le nozze di Figaro*, the horrible North wind woke me and almost blew my nightcap off my head . . . Alas! alas! I thought to myself as I was eating here, instead of that delicious slice of beef, a chunk of a 50-year-old cow . . . Here in Eszterháza no one asks me: 'Would you like some chocolate, with milk or without? . . . What may I offer you, my dear Haydn, would you like a vanilla or a strawberry ice?'

But, as always, he soon recovered; the letter continues: 'I am gradually getting used to country life, and yesterday I composed [*studierte*] for the first time, and indeed quite Haydnish'. Later that year he completed a sonata (HXVI:49) for Mme Genzinger, in the course of which he also advised her on the purchase of a new fortepiano; earlier he had advised her daughter Josepha about her performances of his cantata *Arianna a Naxos* (HXXVIb:2), perhaps composed in 1789 for the Venetian singer Bianca Sacchetti.

But the year 1790 was to prove even more disruptive than Haydn could have suspected in early February. Joseph II died on 20 February, throwing Vienna into mourning; five days later, Nicolaus Esterházy's wife died (Haydn had his hands full keeping him from succumbing to depression), followed on 28 September by the prince himself. Anton, his son and successor, immediately dissolved the musical and theatrical establishment, although Haydn was kept on at a reduced salary without official duties; he also received 1000 gulden a year from Nicolaus's estate. He at once moved to Vienna, taking rooms with a friend, J.N. Hamberger. He declined an offer to become Kapellmeister for Prince Grassalkovics (Nicolaus's son-in-law, resident in Pressburg), and made it clear to King Ferdinando that he would not fulfil any vague promises he might have made to travel to Naples. Whatever his intentions were, they were soon overtaken by events.

4. LONDON, 1791–5. Johann Peter Salomon, born in Bonn but living in London as a violinist and concert producer, heard of Nicolaus Esterházy's death while in Europe engaging musicians for the coming season; he immediately travelled to Vienna, called on Haydn and 'informed' him that he would now be going to London. Salomon was not the first to contemplate this. In 1783 Haydn said of Symphonies nos.76–8 that they were composed 'for the English gentlemen, and I intended to bring them over myself and produce them' at the Professional Concert (the successor to the Bach-Abel Concerts of 1774–82); in July 1787 he contemplated composing an opera and instrumental works for G.A.B. Gallini, the impresario of the Italian opera. Salomon himself had had business dealings with Haydn, who in a letter to Bland of April 1790 referred to 40 ducats owed him by Salomon. However, as long as Nicolaus Esterházy was alive Haydn had been unwilling or unable to negotiate

his freedom; now, Prince Anton willingly granted him a year's leave.

Salomon's initial contract with Haydn governed the 1791 season. Haydn was guaranteed £300 for an opera (here Salomon was acting as agent for Gallini), £300 for six symphonies, £200 for the rights to publish the latter, £200 for 20 other compositions to be conducted at his concerts and £200 profit from a 'benefit' concert. Haydn and Salomon left Vienna on 15 December, travelling via Munich, Wallerstein (where Haydn conducted Symphony no.92) and Bonn to Calais, from where they sailed to Dover on New Year's Day 1791, arriving in London the next day. 'I stayed on deck during the entire crossing', he wrote to Mme Genzinger on 8 January, 'so as to gaze my fill of that great monster, the ocean'.

London was the largest and economically most vibrant city in the world, made even more cosmopolitan by refugees from the French Revolution. Haydn settled in the same house where Salomon lived and also had a studio at Broadwood's music shop, although he complained of the noise and later moved to a suburb. He immediately plunged into a hectic social and professional life which, however stimulating, competed with his need to compose:

My arrival caused a great sensation ... I went the rounds of all the newspapers for three successive days. Everyone wants to know me ... If I wanted, I could dine out every day; but first I must consider my health, and second my work. Except for the nobility, I admit no callers until 2 o'clock.

He also had to give fortepiano lessons, primarily to high personages; he was soon invited to a ball at the Court of St James, and to a concert sponsored by the Prince of Wales (later George IV). The latter was an enthusiastic amateur who became Haydn's most important royal patron; on 1 February 1795 he arranged a soirée with George III and the queen in attendance, in which all the music was of Haydn's composition and he both played and sang. Other royal invitations followed that month and in April.

London's musical life was active and varied, and enriched by a constant stream of artists from abroad. It is abundantly documented; about Haydn's activities there are also his letters to Genzinger and Polzelli, as well as the observations and anecdotes jotted down in his 'London Notebooks'. The 'season' ran from February to May; it included two series of concerts in the Hanover Square Rooms (Salomon and Haydn on Monday and the Professional Concert on Friday), opera on Tuesday and Saturday, and 'ancient music' on Wednesday. Performing forces were generally larger than in Vienna or Eszterháza; in 1791–2 Haydn's symphonies were performed by about 40 players, in 1795 by about 60. The typical concert was a mixed affair, including symphonies, sonatas, arias and duets. A special feature was the massed choral performances in Westminster Abbey; Haydn's experience of hearing Handel's oratorios there was the chief stimulus for *The Creation*.

Haydn arrived with relatively few new works except the string quartets op.64; they were published in 1791–2 by Bland, 'composed by Giuseppe Haydn, and performed under his direction, at Mr Salomon's Concert'. However, Symphonies nos.90–92 had not yet been printed in England; Haydn made use of nos.90 and 92 in 1791, as well as lyre notturnos (arranged for flute and oboe) and *Arianna a Naxos*. Symphony no.92 soon became a favourite, and was one of several symphonies performed on the occasion of his receiving the honorary doctorate of music at Oxford, 6–8 July 1791 (whence its nickname). This event meant a great deal to him; thereafter he often referred to himself in public documents (or when needing to assert his status) as 'Doktor der Tonkunst'.

Among Haydn's new compositions in 1791–2 were the first six 'London' symphonies (nos.93–8). Only nos.95 in C minor and 96 in D ('Miracle') were given in 1791; the others followed in 1792, although nos.93–4 had been composed in the second half of 1791: no.93 in D (17 February), 98 in B♭ (2 March), 94 in G ('Surprise', 23 March), 97 in C (3 or 4 May). His benefit concert in May (fig.6) cleared £350, nearly double the £200 he had been guaranteed. Even though the journalistic prose is somewhat formulaic and may to some extent even have been 'suggested' by Salomon, these concerts were a sensation. The following report is of the first, on 11 March 1791:

Never, perhaps, was there a richer musical treat. It is not wonderful that to souls capable of being touched by music, HAYDN should be an object of homage, and even of idolatry; for like our own SHAKSPEARE he moves and governs the passions at will. His *new Grand Overture* [symphony] was pronounced by every scientific ear to be a most wonderful composition; but the first movement in particular rises in grandeur of the subject, and in the rich variety of *air* and passion, beyond any even of his own productions.

The symphony was no.92, 95 or 96. Charles Burney, with whom Haydn was to become fast friends, waxed equally enthusiastic:

Haydn himself presided at the piano-forte; and the sight of that renowned composer so electrified the audience, as to excite an attention and a pleasure superior to any that had ever, to my knowledge, been caused by instrumental music in England. All the slow middle movements were encored; which never happened before, I believe, in any country.

By contrast, Haydn's new opera, *L'anima del filosofo* or *Orfeo ed Euridice*, was never produced: although he composed it during the spring of 1791 and it had entered rehearsal, Gallini (owing to political intrigue) was denied a licence for the theatre.

By the end of the 1791 season Salomon and Haydn were agreed that he would stay for another year. However, Anton Esterházy (who had written to Haydn cordially in February) wanted him to return; when Haydn informed him that he had signed a new contract with Salomon and requested an additional year's leave, the prince refused, demanding that he inform him 'by the next post the exact

HANOVER-SQUARE.

MR. HAYDN respectfully acquaints the Nobility and Gentry, that his CONCERT will be on This Day, the 16th of May.

Part I. New Grand Overture, Haydn. Aria, Signora Sterace. New Concertante for Violin, Oboe, Flute, and Obligata, Messrs. Salomon, Harrington, and Caravaglio—Haydn. New Aria (with Oboe and Bassoon Obligata) Signor David—Haydn. Concerto Violin, Signor Giornovichi.

Part II. (By particular desire) the new Grand Overture, Haydn, as performed at Mr. Salomon's first Concert. Sonata, Signor Pacchierotti—Haydn. Concertante for Piano Forte and Pedal Harp, Mr. Dusseck and Madame Krumpholtz. Duetto, Signor David and Signor Pacchierotti. Finale, Haydn.

Doors to be opened at Seven, and begin exactly at Eight o'Clock.

Tickets, at Half-a-Guinea each, to be had of Mr. Haydn, No. 18, Great Pulteney-street, Golden-square; at Messrs. Longman and Broderip's, Cheapside and Haymarket; and at Mr. Bland's Music Warehouse, No. 45, Holborn.

*6. Advertisement from 'The Times' (16 May 1791) concerning Haydn's benefit concert, to be given on that day*

time when you will arrive back here again'. Haydn feared outright dismissal; as so often, it did not come to that. The summer and autumn gave him ample opportunity to compose, travel and expand his social circle. In August and early September he stayed on the estate of Nathaniel Brassey, a banker, in Hertfordshire. By mid-September he was back in London; on 5 November he attended an official banquet given by the newly installed Lord Mayor (amusingly described in the Notebooks). On 24–5 November he stayed at Oatlands, a property of the Duke of York, who the previous day had been married to a daughter of the King of Prussia; the new duchess became one of his most loyal patrons.

Meanwhile, he had begun giving piano lessons to Rebecca Schroeter, the attractive and well-to-do widow of the composer and pianist Johann Samuel Schroeter. During the winter of 1791–2 this relationship blossomed into a passionate affair, documented by copies Haydn made of her letters to him (beginning with this one, from 7 March):

> My D[ear]: I was extremely sorry to part with you so suddenly last Night . . . I had a thousand affectionate things to say to you, my heart was and is full of TENDERNESS for you, you are DEARER to me every day of my life . . . I am truly sensible of your goodness, and I assure you my D. if anything had happened to trouble me, I would have opened my heart, & told you with the most perfect confidence. Oh how earnestly [I] wish to see you. I hope you will come to me tomorrow. I shall be happy to see you both in the Morning and the Evening.

Haydn later confirmed the relationship to Dies: 'an English widow in London, who loved me . . . a beautiful and charming woman and I would have married her very easily if I had been free'. Although no letters between them survive following his departure in the summer of 1792, they remained close: Haydn dedicated the piano trios HXV:24–6 (1795) to her, she witnessed an important contract of 1796 regarding English editions of his music, they were in touch again regarding business in 1797 and she was a subscriber to *The Creation*.

Haydn's and Salomon's plans for the 1792 season were complicated by the organizers of the Professional Concert, whom Haydn had disappointed in the 1780s and who in 1791 had printed scurrilous notices alleging that his talent had dried up. As he wrote to Genzinger (17 January), complaining of overwork:

> At present I am [composing] for Salomon's concerts, and I am making every effort to do my best, because our rivals, the Professional Concert, have had my pupil Pleyel from Strasbourg come here to conduct their concerts. So now a bloody harmonious war will commence between master and pupil. The newspapers are all full of it, but it seems to me that there will soon be an armistice, because my reputation is so firmly established. Pleyel behaved so modestly towards me on his arrival that he won my affection again.

Pleyel's music, similar to but far less brilliant and complex than his master's, was then very popular. Haydn's outward modesty and good manners notwithstanding, he was not about to be upstaged by a former student whose talent lay far beneath his own. Even his most famous 'surprise', in the eponymous symphony, played a role. Griesinger writes:

> I jokingly asked him once if it was true that he composed the Andante . . . in order to wake up the dozing English audience. 'No . . . my intention was to surprise the public with something new, and to debut in a brilliant manner, in order to prevent my rank from being usurped by Pleyel, my pupil . . .'

Another orchestral work of 1792 is the 'Concertante', a *symphonie concertante* for violin, cello, oboe and bassoon and orchestra (given on 9 March); it was composed in direct competition with his former pupil's most popular composition.

On 10 April 1792 Haydn wrote to Prince Anton, informing him that 'our concerts will be finished at the end of June, after which I shall begin the journey home without delay, in order to serve my most gracious prince and lord again'. He departed from London at the end of June or beginning of July, travelling via Bonn (where he met Beethoven) and Frankfurt. There is considerable evidence that he intended to return for the 1793 season; in the event he did not until 1794. On 24 July 1792 he arrived in Vienna, occupying the same lodgings as in the autumn of 1790. His 18 months in the Habsburg capital were uneventful. Polzelli was in Italy (still asking for money), and Mme Genzinger died on 20 January 1793. Haydn must have been lonely when not absorbed in his work, a condition presumably not ameliorated by his wife's suggestion that they purchase a small house in the suburb of Gumpendorf (not occupied until 1797; it is now the Vienna Haydn Museum). Beethoven arrived in November, and their intercourse began immediately; it included a stay at Eisenstadt with Haydn in the summer of 1793. Haydn set him (like all his students) to a systematic course of counterpoint on Fux's model, but had neither time nor inclination to correct the exercises systematically, and Beethoven switched to Albrechtsberger. More important to both composers was doubtless whatever comments Haydn made about free composition, as well as shop-talk about musical life and career-building (these seem to have been his chief contribution to the training of his many 'pupils' during the 1790s). By early winter he had decided not to return to London in 1793: he had finally determined to undergo an operation for a long-painful polyp in his nose, and perhaps he feared travelling at a dangerous stage in the Napoleonic Wars. In any case it was to his advantage to take an additional year, so as to be able to have new compositions in his portfolio on his return.

In November 1792 Haydn produced 12 each of new minuets and German dances (HIX:11–12) at a charity ball, and immediately published them with Artaria. Keess had produced Symphonies nos.95–6 in the winter of 1791–2; Haydn produced others himself on 15 March 1793, and again for the Tonkünstler-Societät in December, where he also gave his choral 'madrigal' *The Storm* (HXXIVa:8) in a revised version with a German text, possibly by Swieten. He began the string quartets op.71/74 (a single opus of six) in late 1792 and composed them mainly in 1793, with a view to producing them in London. He also refined his sales methods: a nobleman (in this case Count Anton Georg Apponyi) purchased the 'dedication' for 100 ducats, for which he received the exclusive right (in Vienna) to own a manuscript copy and to perform the quartets until Haydn published them (after one or two years), and was named as dedicatee on the editions. Later in 1793 Haydn worked on three symphonies for London, completing no.99 in E♭, the second and third movements of no.100 in G ('Military') and all but the first movement of no.101 in D ('Clock'); he may also have begun the first set of English songs. Another major composition from 1793 is the variations for piano in F minor HXVII:6. On 19 January 1794 he departed for London, accompanied by the former Esterházy copyist Johann Elssler, now his amanuensis; they arrived on 5

February. On the way they stayed in Passau, where he heard a choral arrangement of the *Seven Last Words* by the local Kapellmeister, Joseph Friebert.

The Professional Concert having disbanded, in 1794 Haydn and Salomon had the stage to themselves. Symphony no.99 had its première on 10 February 1794, no.101 on 3 March, no.100 on 31 March. In the summer Haydn travelled to Portsmouth, the Isle of Wight, Bath and Bristol. For the 1795 season, however, Salomon abandoned his concerts, owing to the difficulty of obtaining 'vocal performers of the first rank from abroad' (he resumed them in 1796). Haydn therefore allied himself with the so-called Opera Concerts, directed by the violinist and composer Giovanni Battista Viotti, with an even larger orchestra, of approximately 60 players; Symphony no.102 was first given on 2 February, no.103 ('Drumroll') on 2 March, and no.104 – 'The 12th which I have composed in England', Haydn wrote on the autograph, doubtless with more than a touch of pride – at his benefit concert on 4 May. His success was greater than ever; following the benefit, Burney wrote that his 1795 symphonies were 'such as were never heard before, of any *mortal's* production; of what Apollo & the Muses compose or perform we can only judge by such productions as these'. Another important work given its première at this concert was the cantata *Berenice, che fai* (HXXIVa:10), composed for the reigning prima donna, Brigida Giorgi Banti.

Haydn's compositions from 1794–5 are more heterogeneous than those from 1791–2. He returned to piano music for the first time since 1790, composing at least three sets of trios: HXV:18–20, dedicated to Maria Therese Esterházy, the widow of Prince Anton; 21–3, dedicated to Maria Hermenegild, the wife of Anton's successor Prince Nicolaus II; and 24–6, dedicated to Mrs Schroeter. Nos.27–9 were dedicated to his friend Therese Jansen (*b* *c*1770), a celebrated virtuoso who in 1795 married a son of the engraver Francesco Bartolozzi (Haydn was a witness); it is unclear whether they date from 1795 or 1796. He composed no.31 for Jansen as well: the finale (1794) originated as an occasional piece titled 'Jacob's Dream!', designed to amuse her by showing up the insufficiencies of a self-important violinist in the higher registers. He also composed sonatas nos.50 and 52 for Jansen, and no.51 probably for Schroeter. Another genre he took up again owing to the influence of a lady was the solo song. The muse was Anne Hunter (1742–1821), another well-to-do widow (of the famous surgeon John Hunter) and a minor poet, who supplied the texts for at least nine of Haydn's 14 songs in English; 12 appeared as two sets of *Original Canzonettas* in 1794–5. He also composed numerous arias, divertimentos, marches, canons and other works.

Haydn's London visits were the highpoint of his career up to that time. Griesinger reports that he earned 24,000 gulden and netted 13,000 (the equivalent of more than 20 years' salary at the Esterházy court), and that he 'considered the days spent in England the happiest of his life. He was everywhere appreciated there; it opened a new world to him'. Whether he seriously contemplated staying is not known; Prince Anton Esterházy had died in 1794, freeing him from even a nominal obligation to the court, and the royal family attempted to persuade him to remain. But the question was settled when Anton's successor, Nicolaus II, offered him reappointment as Esterházy Kapellmeister. Although he remained in London for two months following the end of the 1795 season, composing trios and canzonets and seeing to the publication of many of his English compositions – he established new, long-term relations, for example with the 'musick seller' F.A. Hyde, an agent for Longman & Broderip, with whom he signed an elaborate contract in 1796 – he departed (according to Dies) on 15 August, travelling via Hamburg and Dresden and arriving in Vienna presumably around the beginning of September. His new house still not being ready for occupancy, he took lodgings on the Neuer Markt in the old city.

5. VIENNA, 1795–1809. 'Haydn often said that he first became famous in Germany owing to his reputation in England' (Griesinger). From 1761 to 1790, notwithstanding his fame as a composer and the brilliance of the Esterházy court, he had been 'stuck in the country' (letter to Artaria, 17 May 1781); he could never be in Vienna for very long, his music was not in favour at the imperial court and his relationship with the Tonkünstler was strained. In 1795, by contrast, he returned as a culture-hero. Many of his remaining works originated in collaboration with the cultural-political establishment and were staged as 'events' of social and ideological as well as musical import. The key figure was Baron van Swieten, the imperial librarian and censor and the resolutely high-minded leader of the Gesellschaft der Associirten, an organization of noble patrons who subsidized large-scale performances of oratorios and the like. In addition, Haydn's position as Esterházy Kapellmeister was far less onerous than before. Nicolaus II largely abandoned Eszterháza in favour of Vienna and Eisenstadt; Haydn's primary duty was to supply a mass each year for performance in conjunction with the celebration of the nameday (8 September) of Maria Hermenegild, Nicolaus's

*7. Joseph Haydn: miniature by an anonymous artist, ?1788 (Gesellschaft der Musikfreunde, Vienna)*

consort; this took place in Eisenstadt, where he usually spent the summer.

As a result, Haydn's compositional orientation changed fundamentally. He composed little instrumental music: no orchestral works save the Trumpet Concerto (1796) and only one piano work (the trio no.30, 1796; nos.27–9 may have been completed then as well); the only genre he actively cultivated was the string quartet, with op.76 (completed 1797, dedicated to Count Joseph Erdődy; published in 1799) and op.77 (1799, dedicated to Prince Joseph Franz Lobkowitz; published in 1802). Instead, he devoted himself primarily to sacred vocal music: masses for Esterházy and oratorios for Vienna. Both the *Missa Sancti Bernardi von Offida* (*Heiligmesse*) and the *Missa in tempore belli* (*Paukenmesse*) are dated 1796; the former was apparently composed first and performed in Eisenstadt, while the latter originated in the autumn and was first given at the Piaristenkirche in Vienna on 26 December, then produced in Eisenstadt in 1797. There followed the *Missa in angustiis* (commonly known as the 'Nelson Mass') in 1798, the *Theresienmesse* in 1799, the *Schöpfungsmesse* in 1801 and the *Harmoniemesse* in 1802; thereafter this office was fulfilled by other composers, including Hummel and, in 1807, Beethoven. The absence of new masses in 1797 and 1800 doubtless reflects Haydn's intense work on *The Creation* and *The Seasons*, respectively, during those two years.

Haydn's collaboration with Swieten began in early 1796 with an arrangement of the *Seven Last Words* as a kind of oratorio: more precisely, a reworking of Friebert's arrangement (see §4). He added chorale-like *a cappella* intonations preceding most of the 'words' and a wind band introduction to the second part, rewrote the choral parts and revised the orchestration; Swieten revised the text and arranged for the première at the Schwarzenberg Palace, on 26–7 March. Haydn produced it often thereafter, usually for the benefit of the Tonkünstler-Societät. In 1797 that organization finally made up for its earlier neglect: on 20 January, a letter signed by Salieri and Paul Wranitzky granted Haydn free admission to all their concerts for life, and on 11 December he was elected a 'senior assessor' in perpetuity.

An overtly political composition was the 'Emperor's Hymn', *Gott erhalte Franz den Kaiser*, from winter 1796–7. Although one later account has Swieten manipulating things, the immediate impetus came from Count Joseph Franz Saurau, the president of Lower Austria and later Minister of the Interior:

> I have often regretted that unlike the English we had no national anthem suited to display before the entire world the devoted attachment of the people to their *Landesvater* . . . This seemed especially necessary at a time when the Revolution in France was raging at its strongest . . .
> I had a text fashioned by the worthy poet [Lorenz Leopold] Haschka; and to have it set to music, I turned to our immortal compatriot Haydn, who, I felt, was the only man capable of creating something that could be placed at the side of . . . 'God Save the King'.

Haydn identified thoroughly with the cultural politics of this project. In late January 1797 the hymn was hastily printed and disseminated, and performed in theatres throughout the Habsburg realm on the emperor's birthday, 12 February. This 'Volkslied', as he called it, combined hymnlike and popular elements so successfully that it became the anthem of both Austria and Germany. Later in 1797 he employed the melody as the basis for the variation movement in the String Quartet op.76 no.3, and in his last years he played it daily at the piano.

But Haydn and Swieten were already pursuing bigger game. On Haydn's departure from England Salomon had given him a libretto (now lost) entitled *The Creation of the World*, supposedly written for Handel but never set to music. Back in Vienna, Haydn showed it to Swieten: 'I recognized at once that such an exalted subject would give Haydn the opportunity *I had long desired*, to show the whole compass of his profound accomplishments and to express the full power of his inexhaustible genius'; the emphasized phrase implies that Swieten's purpose was not artistic alone, but cultural-political as well. The Associirten guaranteed Haydn 500 ducats and subsidized the copying and performance. Haydn, whose enthusiasm for the project was bound up with his experience of Handel in London, conceived the remarkable notion of disseminating the work in both German and English (it is apparently the first original bilingual composition). Swieten translated the libretto and adapted the English prosody to his German version; he also made suggestions regarding the musical setting, many of which Haydn adopted. He began the composition apparently in autumn 1796 (Albrechtsberger wrote to Beethoven in December that he had heard him 'improvise' from it); it was at least half done by summer 1797 and according to F.S. Silverstolpe (see Stellan Mörner, E1969) was completed during the autumn, in Eisenstadt, although the preparation of performance materials (which entailed revisions) lasted up to March 1798.

The Associirten at first produced the work only in private, again at the Schwarzenberg Palace; following a 'Generalprobe' on 29 April the official première took place on the 30th, with additional performances on 7 and 10 May. The effect was overwhelming; Silverstolpe reported:

> No one, not even Baron van Swieten, had seen the page of the score wherein the Creation of Light is portrayed . . . Haydn had the expression of someone who is thinking of biting his tongue, either to hide his embarrassment or to conceal a secret. And in that moment when Light broke forth for the first time, one would have said that light-rays darted from the composer's blazing eyes. The enchantment of the electrified Viennese was so profound that the performers could not proceed for some minutes.

The first public performance took place on 19 March 1799, at the Burgtheater, with a complement of about 180 performers (not 400, as has been speculated); a benefit for the Tonkünstler followed on 22 December. The work immediately became a staple especially of charity performances, many conducted by Haydn himself, which brought in tens of thousands of gulden. 'I know that God has favoured me', he said to Griesinger, 'but the world may as well know that I have been no useless member of society, and that one can also do good by means of music'. Beyond this, *The Creation* 'made history' immediately and on a pan-European scale in a way equalled by no other composition, owing to its fortunate combination of sublime subject, cultural-historical 'moment' on the cusp between Enlightenment and Romanticism, appeal to both high-minded and ordinary listeners, Haydn's unrivalled stature and the originality and grandeur of his music. His pride in and personal identification with the work, in addition to his usual concern for financial advantage, induced him to publish it himself, selling it 'by subscription' all over Europe, with the

assistance of colleagues such as Dr Burney; his advertisement (June 1799) reads:

> The success which my Oratorio *The Creation* has been fortunate enough to enjoy . . . [has] induced me to arrange for its dissemination myself. Thus the work will appear . . . neatly and correctly engraved and printed on good paper, with German and English texts; and in full score, so that [at least] one work of my composition will be available to the public in its entirety, and the connoisseur will be in a position to see it as a whole and to judge it.

The edition appeared at the end of February 1800 with a list of more than 400 subscribers. By spring 1799 Haydn and Swieten were planning a second oratorio, *The Seasons*, with a libretto based on James Thomson's pastoral epic of 1726–8; Haydn composed the music apparently from autumn 1799 to the end of 1800. He suffered a serious illness in winter 1800–01, as the work neared completion, during which he again identified with his own oratorio. His pupil Sigismund Ritter von Neukomm reported:

> Speaking of the penultimate aria, 'Behold, O weak and foolish man, Behold the picture of thy life' . . . he said: 'This aria refers to *me*!' And in this wonderful masterpiece he really did speak entirely from his inmost soul, so much so that he became seriously ill while composing it, and . . . the Lord . . . allowed him to see 'his life's image and his open grave'.

The private première at the Schwarzenberg Palace took place on 24 April 1801, the first public production on 19 May. Although the initial reception of *The Seasons* was favourable – Haydn wrote to Clementi that it had enjoyed 'unanimous approval' and that 'many prefer it to *The Creation*, because of its greater variety' – critical opinion soon became mixed, owing in part to its perceived 'lower' subject, in part to a growing aesthetic resistance to its many pictorialisms. Haydn himself contributed to both strands of criticism: he supposedly said to Francis II, 'In *The Creation* angels speak and tell of God, but in *The Seasons* only Simon speaks' (Dies); and he indiscreetly criticized Swieten's croaking frogs ('Frenchified trash') and the absurdity of a choral hymn to toil (*Fleiss*). Nonetheless he maintained that it would join *The Creation* in assuring his lasting fame. For the publication he took the path of lesser resistance, selling the rights to Breitkopf & Härtel.

Other than masses, Haydn's only important liturgical work from this period is the *Te Deum* 'for the Empress' (HXXIIIc:2), probably composed in 1800 and apparently first given in September in Eisenstadt, perhaps in conjunction with the visit there of Lord Nelson (whence the nickname 'Nelson Mass' for the *Missa in angustiis*). A very different kind of vocal composition is represented by the 13 partsongs (HXXV), composed in the years 1796–9. A number of lieder and canons date from the same years; the latter were also 'private' works, the autographs of which Haydn framed and mounted on the walls of his house. A chapter in its own right is the hundreds of arrangements of British folksongs he sold to the publisher George Thomson in Edinburgh, not all from his own pen; as in so many other respects, Beethoven followed him in this lucrative commission.

In 1799 Haydn began to complain of physical and mental weakness. He wrote to Härtel in June:

> Every day the world compliments me on the fire of my recent works, but no one will believe the strain and effort it costs me to produce them. Some days my enfeebled memory and the unstrung state of my nerves crush me to the earth to such an extent that I fall prey to the worst sort of depression, and am quite incapable of finding even a single idea for many days thereafter; until at last Providence revives me, and I can again sit down at the pianoforte and begin to scratch away.

Indeed his productivity began to decline about this time, although his music continued to gain in 'fire' and cogency as long as he continued to compose. His last major completed work was the *Harmoniemesse* given in September 1802; there followed only (perhaps) the 'Hungarian National March' (HVIII:4; referred to in a letter of November) and the unfinished String Quartet op.103 of 1802–3, originally intended to go with op.77 to complete an opus of three (published 1806, dedicated to Count Moritz von Fries). He deeply regretted his loss of the stamina and concentration necessary for composition. On 6 December 1802 he thanked Pleyel for the receipt of the latter's edition of his complete string quartets, adding: 'I only wish that I could have back 10 years of my advanced age, so that I could provide you with something new of my composition – perhaps – despite everything – it can still happen'; a draft or alternative version (printed by Griesinger) of the letter to Härtel quoted above includes the passage: 'It is almost as if with the decline in my mental powers, my desire and compulsion to work increase. O God! how much remains to be done in this glorious art, even by such a man as I have been!' One inevitably thinks of Beethoven, who would soon prove him right: their relationship was difficult around the years 1798–1803, owing to Beethoven's 'anxiety of influence' vis-à-vis Haydn, the crisis of his deafness, Haydn's increasing frailty and their mutual ambivalence regarding Beethoven's eventual assumption of the mantle of greatest living composer.

In the same letter Haydn also complained about the press of business (he was then arranging the self-publication of *The Creation*). Härtel added to that burden by initiating negotiations towards the publication of the so-called *Oeuvres complettes* (1800–06). This was not a complete edition but comprised salable works for or with piano, analogous to an edition of Mozart already under way. In this connection Härtel sent Haydn a list of compositions attributed to him, asking him to pronounce on their authorship; Haydn (rather casually) did so. This was the first of several initiatives that led to Haydn's and Elssler's production in 1805 of the comprehensive 'Catalogue of all those compositions that I approximately recall having composed from my 18th to my 73rd year', or 'Haydn-Verzeichnis'.

In 1800 Haydn's wife died, leaving much of her modest estate to him. No longer interested in marriage, he signed a declaration in which he promised to marry Luigia Polzelli or no-one, as well as to bequeath her 300 gulden a year (a sum he later reduced to 150). In May–June 1801 he drew up his will; the largest bequests were to his two brothers, but he also included among the beneficiaries many other relatives, former benefactors (and perhaps lovers), servants, religious and charitable institutions. From 1800 on he received a steady stream of distinguished visitors, honours and medals of which a gold medal from and honorary citizenship of the City of Vienna, in recognition of his charitable performances, meant the most to him. He also continued to talk shop with younger musicians; in addition to Pleyel and Beethoven, those who benefited included Anton Wranitzky, Neukomm, Reicha, Eybler, Weigl, Seyfried, Hummel, Diabelli, Kalkbrenner and Weber.

Haydn's last public musical function was on 26 December 1803, when he conducted the *Seven Last Words*. Thereafter he mainly stayed at home in Gumpendorf; after 1805 he wrote no letters in his own hand. His youngest brother Johann died in Eisenstadt in that year, and Michael (who in 1801–2 had declined an invitation to succeed him as Esterházy Kapellmeister) followed in 1806. His last public appearance of any kind was on 27 March 1808, at a gala performance of *The Creation* in honour of his 76th birthday, in the Great Hall of the University. He signed his last will on 7 February 1809, altered primarily to reflect the many deaths that had taken place in the meantime. It disbursed about 24,000 gulden; his estate totalled about 55,000 gulden. During the spring he progressively weakened and had to be cared for by Elssler and other servants. His final decline was hastened by the French bombardment of Vienna on 11–12 May; Napoleon ordered that a guard of honour be stationed at his house, and his last known visitor was a French officer who paid his respects and sang an aria from *The Creation*. After playing the 'Emperor's Hymn' on 26 May 'with such expression and taste that our good Papa was astonished about it himself . . . and was very pleased' (Elssler), he had to be assisted to bed; he did not rise again. He died at about 20 minutes before 1 a.m. on 31 May; owing to the war only a simple burial was possible, the following afternoon. On 15 June a solemn memorial service was held in the Schottenkirche, with a performance of Mozart's Requiem. His remains are now interred in the Bergkirche in Eisenstadt.

6. CHARACTER AND PERSONALITY. The traditional image of Haydn's personality has been that of 'Papa Haydn': pious, good-humoured, concerned for the welfare of others, proud of his students, regular in habits, conservative. Although not inaccurate, it is one-sided; it reflects the elderly and increasingly frail man his first biographers knew. Insight into the personality and behaviour of the vigorous and productive composer, performer, Kapellmeister, impresario, businessman, conqueror of London, husband and lover, whose career had already spanned 50 years when Griesinger met him in 1799, must be inferred from his correspondence (which is more revealing than is usually assumed) and from other sources.

Haydn's public life exemplified the Enlightenment ideal of the *honnête homme*: the man whose good character and worldly success enable and justify each other. His modesty and probity were everywhere acknowledged (he was occasionally entrusted with secret diplomatic communications). These traits were not only prerequisites to his success as Kapellmeister, entrepreneur and public figure, but also aided the favourable reception of his music. A more appropriate sense of 'Papa' would be that of 'patriarch', as in the resolution making him a life member of the Tonkünstler-Societät in 1797, 'by virtue of his extraordinary merit as the father and reformer of the noble art of music'. The many younger musicians who benefited from his teaching and advice, as well as the court performers whom he directed, seem to have regarded him as a father-figure, or kindly uncle; he was well disposed towards them and helped them as he could, although there is little evidence that he thought of them as substitutes for the children he (apparently) never had.

When conditions permitted (i.e. in Vienna and London) Haydn enjoyed a rich emotional and intellectual life. In addition to his intimate relationships with Polzelli, Genzinger and Schroeter, he developed warm friendships with Mozart and Albrechtsberger; with Burney, Dr and Mrs Hunter and Therese Jansen; with an unnamed man to whom he wrote from Vienna in December 1792 (in English), playing the role of honorary godchild: 'I rejoice very much that my handsome and good Mother Susana has changed her state . . . I wish from all my heart, that my Dear Mother may at my arrival next year present me a fine little Brother or Sister'; with 'my dear' Nancy Storace and 'my very dearest' Nanette Bayer (a 'great genius' of a pianist, employed by Count Apponyi) and many others. His observations in the London Notebooks reveal an active interest in every aspect of social life and culture, 'high' and 'low' alike. He was interested in literature, art and philosophy and gladly circulated and corresponded with intellectuals and freemasons, albeit without pretensions to being an intellectual himself.

Haydn's character was marked by a duality between earnestness and humour. F.S. Silverstolpe, who saw much of him during the composition of *The Creation*, reported:

> I discovered in Haydn as it were two physiognomies. One was penetrating and serious, when he talked about anything sublime, and the mere word 'sublime' was enough to excite his feelings to visible animation. In the next moment this air of exaltation was chased away as fast as lightning by his usual mood, and he became jovial with a force that was visible in his features and even passed into drollery. The latter was his usual physiognomy; the former had to be induced.

The many anecdotes about Haydn's youthful propensity to practical joking, however implausible individually, must collectively reflect some reality. Griesinger found that 'a guileless roguery, or what the British call *humour*,

*8. Joseph Haydn: bust by Anton Grassi, porcelain, 1801–2 (Historisches Museum der Stadt Wien)*

was one of Haydn's outstanding characteristics'. But he was also a devout Catholic: he inscribed most of his autographs 'In nomine Domini' at the head and 'Laus Deo' at the end, and composed major works in honour of the Virgin, including the *Stabat mater*, the *Salve regina* in G minor, and the *Missa Cellensis* and 'Great Organ Mass'. His most important instrumental work of the 1780s was arguably the *Seven Last Words*. He identified personally with *The Creation* and the religious portions of *The Seasons* and came to think of the former in overtly moralistic terms, as he wrote in 1801:

> The [story of the] Creation has always been considered the sublimest and most awe-inspiring image for mankind. To accompany this great work with appropriate music could certainly have no other result than to heighten these sacred emotions in the listener's heart, and to make him highly receptive to the goodness and omnipotence of the Creator.

Haydn's personality was more complex than has usually been thought. His marriage was unhappy, and he was often lonely and at times melancholy. In May 1790 he wrote to Mme Genzinger: 'I beg Your Grace not to shy away from comforting me by your pleasant letters, for they cheer me up in my isolation, and are highly necessary for my heart, which is often very deeply hurt'. Nor was it only a question of his physical and social isolation at Eszterháza; from London he wrote to Polzelli of his 'melanconia' in much the same terms.

His modesty, genuine though it was, had distinct limits. He took pride in his works, notably including his vocal music; he wrote to Artaria in October 1781:

> My lieder, through their variety, naturalness, and beautiful and grateful melodies, will perhaps surpass all others . . . Now something from Paris: Mr leGros . . . wrote me all sorts of nice things about my *Stabat mater*, which was given . . . to the greatest applause . . . They were surprised that I was so extraordinarily successful in vocal music; but *I* wasn't surprised at all, for they haven't heard anything yet. If they could only hear . . . my most recent opera *La fedeltà premiata*! I assure [you] that nothing comparable has yet been heard in Paris, and perhaps not even in Vienna.

Haydn prized his status as an original (see §7); he bluntly rejected the notion that Sammartini might have been an influence on his early string quartets, adding (to Griesinger) that he acknowledged only C.P.E. Bach as a model. He was sensitive to criticism: he resented north Germans' rejection of his stylistic mixture (which seemed to them a breach of decorum), was jealous of Joseph II's patronage of inferior composers such as Leopold Hofmann (whose 'Gassenlieder' in particular he intended to surpass), and railed against those who pointed out technical flaws such as parallel 5ths in his late music. He took pains to forestall potential criticism of the similar beginnings of the sonatas HXVI:36/ii and 39/i by printing a prefatory note asserting that he had done this deliberately, 'in order to show different methods of realization'. After Mozart's death he willingly accepted the role of greatest living composer; in London he actively defended his 'rank' against Pleyel's challenge. Despite his grateful dependence on Swieten for librettos and patronage by the Associirten, behind Swieten's back he gibed that his symphonies were 'as stiff as the man himself' and ridiculed the libretto of *The Seasons*. His despair at no longer being able to compose after 1802 was doubtless fuelled in part by resentment at Beethoven's success in pushing forward into new domains of music – domains that he believed would have lain open to him if only his health had not failed.

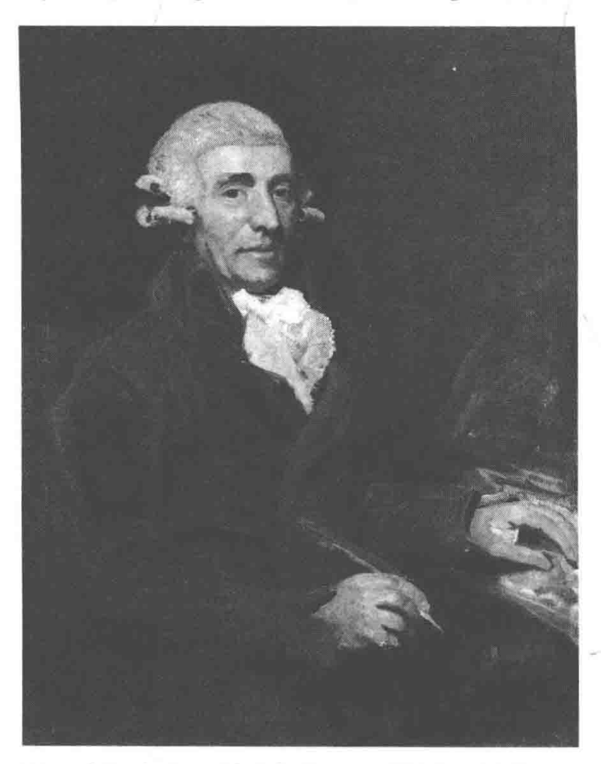
Although Haydn often protested his devotion to the Esterházy princes, 'in whose service I wish to live and die' (1776), and praised Nicolaus for providing the conditions under which his art could develop, his attitude towards the court was never subservient and over time became increasingly ambivalent. He did not hesitate to assert his interests and those of his musicians against the court administration: these interventions were usually successful (including, for example, re-engaging Polzelli and her husband and keeping them on the payroll for ten years). The relationship between Nicolaus and Haydn was not merely that of prince and employee: their playing baryton trios together (Haydn presumably on the viola) was by definition intimate music-making, and according to Framery the composer had to restore the prince from attacks of depression (Haydn himself described this in March 1790, admittedly during Nicolaus's bereavement). After 1780 he became increasingly independent of the court both compositionally and financially, and he hated having to abandon the artistic and social pleasures of Vienna for distant Eszterháza. After Nicolaus's death he was *de facto* a free artist. In a letter of September 1791 to Mme Genzinger his ambivalence is palpable:

> This little bit of freedom, how sweet it tastes! I had a good prince, but at times I was forced to be dependent on base souls. I often sighed for release; now I have it in some measure . . . Even though I am burdened with more work, the knowledge that I am not bound to service makes ample amends for all my toil. And yet, dear though this freedom is to me, I long to be in Prince Esterházy's service on my return, if only for the sake of my poor family. However, I doubt that this longing can be satisfied, in that my prince . . . absolutely demands my immediate return, which however I cannot comply with, owing to a new contract I have entered into here.

Indeed, London won out. Yet in 1795 he was glad to become Kapellmeister again – although only on condition of minimal duties.

As regards money, Haydn was so self-interested as to shock both certain high-minded contemporaries (Joseph Martin Kraus, Friedrich Rochlitz) and many later authorities. Whereas until 1749 he presumably suffered nothing worse than ordinary schoolboy privations, during his early freelance years he lived in poverty, an experience he was determined never to repeat. He always attempted to maximize his income, whether by negotiating the right to sell his music outside the Esterházy court, driving hard bargains with publishers or selling his works three and four times over; he regularly engaged in 'sharp practice' and occasionally in outright fraud. When crossed in business relations, he reacted angrily. At times his protestations of straitened circumstances were mendacious (as when denying Polzelli's requests for money), or perhaps self-deceptive. Yet Haydn was generous. He supported his brother Johann for decades and bequeathed substantial sums to relatives, servants and those who had supported him in his youth, and took pride in the large sums generated for charity by performances of his oratorios.

Haydn's appearance is known from various descriptions and from many paintings and busts. He was not handsome; he was 'small in stature, but sturdily and strongly built. His forehead was broad and well modelled, his skin brownish, his eyes lively and fiery, his other features full and strongly marked, and his whole physiognomy and bearing bespoke prudence and a quiet gravity' (Griesinger); but he also had an overlarge nose, exacerbated by his long-term polyp, and was pockmarked (Dies). Of the many contemporary images only a few avoid idealizing their subject. From about 1768 there



is a portrait by Grundmann, the Esterházy court painter, showing the young and self-assertive Kapellmeister in uniform (fig.1). More conventional in both facial features and the pose at the keyboard are the various images based on a lost painting of uncertain date by Guttenbrunn (fig.4; Haydn's wife and Griesinger claimed that it was a good likeness) and the engraving by Mansfield (1781) published by Artaria. There is a good miniature from about 1788 (fig.7). From London we have formal portraits by Hoppner and Hardy, of which the former (fig.9) has the more personality; still more is conveyed in the drawing by George Dance (in two versions; fig.10), which Haydn claimed was the best likeness of himself. Several sculptures survive from the last Vienna years, including two busts by Grassi (fig.8; praised by Griesinger); there is also a deathmask, taken by Elssler.

7. Style, aesthetics, compositional method. Haydn's style was understood in his own day as unique. He famously commented to Griesinger:

> My prince was satisfied with all my works; I received approval. As head of an orchestra I could try things out, observe what creates a [good] effect and what weakens it, and thus revise, make additions or cuts, take risks. I was cut off from the world, nobody in my vicinity could upset my self-confidence or annoy me, and so I had no choice but to become original.

By 'original' he seems to have meant that he belonged to no school and acknowledged few if any models. However, in late 18th-century aesthetics originality also implied genius, a link emphasized among others by Kant.

In many ways Haydn's style can be understood as analogous to the duality in his personality between earnestness and humour. He said as much when referring to his method of composition: 'I sat down [at the keyboard] and began to fantasize, according to whether

*9. Joseph Haydn: portrait by John Hoppner, 1791 (Royal Collection, Windsor Castle)*

*10. Joseph Haydn: portrait by George Dance, pencil, 1794 (Historisches Museum der Stadt Wien)*

my mood was sad or happy, serious or trifling'. Of course, in his music these qualities are not unmediated binary opposites but poles of a continuum. Admittedly, since about 1800 wit has been the better understood pole. Johann Karl Friedrich Triest wrote (1801) of his 'unmistakable manner': 'what the English call "humour", for which the German *Laune* does not quite provide an exact equivalent'. Haydn's 'unique' or 'inimitable' *Laune* was a frequent motif in contemporary criticism. Most of the familiar nicknames for his works respond to features that listeners have taken as humorous; e.g. the 'Surprise' Symphony or the 'Joke' Quartet op.33 no.2. In other cases the wit is on a higher plane, e.g. the 'ticking' accompaniment in the slow movement of the 'Clock' Symphony, no.101. The crucial point, however, is that Haydn's popular style is not a simple projection of his personality, but his compositional 'persona' or 'musical personality', deliberately assumed for complex artistic purposes. Indeed 'wit' signifies intelligence as well as humour: his inexhaustible rhythmic and motivic inventiveness, the conversational air of many quartet movements, his formal ambiguity and caprice, his brilliant and at times disquieting play with beginnings that are endings and the reverse (the 'Joke' Quartet ending has stimulated half a dozen learned exegeses). Often Haydn's wit shades into irony, as was recognized by his contemporaries: 'Haydn might perhaps be compared, in respect to the fruitfulness of his imagination, with our Jean Paul [Richter] (omitting, obviously, his chaotic design; transparent representation (*lucidus ordo*) is not the least of Haydn's virtues); or, in respect to his humour, his original wit (*vis comica*) with Lor. Sterne' (Triest). In fact, his irony goes beyond wit: a passage may be deceptive in character or function (the D major interlude in the first

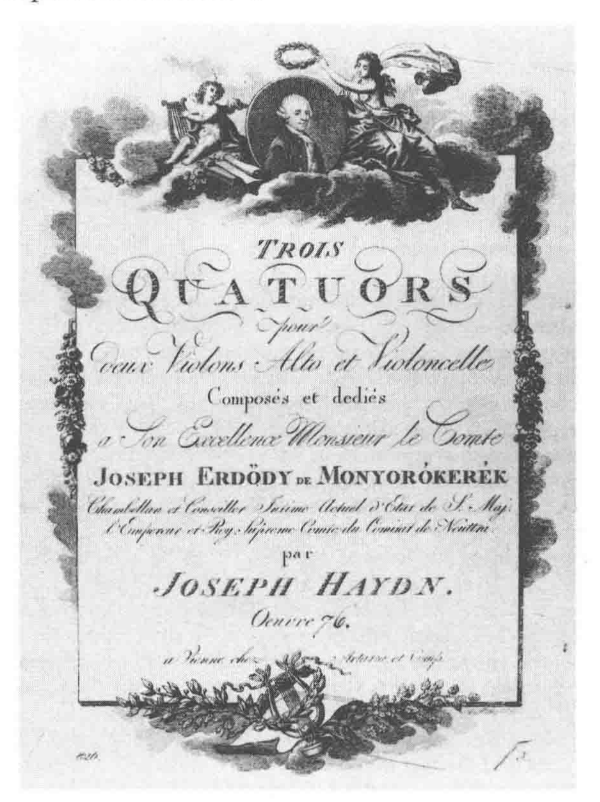
movement of the 'Farewell' Symphony sounds like a minuet out of context, but it is not a minuet and plays a crucial tonal and psychological role), or a movement may systematically subvert listeners' expectations until (or even past) the end (the finale of the Quartet op.54 no.2). Like Beethoven, Haydn often seems to problematize music rather than merely to compose it (the tonal ambiguity at the beginning of op.33 no.1).

Earnestness and depth of feeling are equally important to Haydn's art. These qualities were less appreciated in the 19th and early 20th centuries, owing in part to the absence of his vocal music and much of his earlier instrumental music from the standard repertory, in part to a lack of sympathy for his extra-musical and ethical concerns during the age of absolute music. But Griesinger reported: 'Haydn said that instead of so many quartets, sonatas and symphonies he should have composed more vocal music, for he could have become one of the leading opera composers'. Until about 1800 vocal music was as responsible for his reputation as instrumental; Gerber wrote in 1790: 'around the year 1780 he attained the highest level of excellence and fame through his church and theatre works'. Like all 18th-century composers, Haydn believed that the primary purpose of a composition was to move the listener, and that the chief basis of this effect was song. He was an excellent tenor in the chamber (if not the theatre). He insisted to Griesinger that a prerequisite for good music was 'fluent melody', and he 'criticized the fact that now so many musicians compose who have never learnt how to sing: "Singing must almost be reckoned one of the lost arts; instead of song, people allow the instruments to dominate"'.

This emphasis on feeling also applies to instrumental music – even sprightly allegros and minuets – and throughout Haydn's career. Much of his early music is earnest, at times even harsh; see the keyboard Trio HXV:f1, the String Trio HV:3, the slow movement of the String Quartet op.2 no.4, Symphony no.22 and much else, to say nothing of vocal works such as the *Stabat mater* and the *Salve regina* in G minor. Many of his keyboard works are affective in an intimate way: he wrote to Mme Genzinger regarding the Adagio of Sonata no.49: 'It means a great deal, which I will analyse for you when I have the chance'. His orchestral music 'signified' as well: the slow introductions to the London symphonies are implicit invocations of the sublime, and this topic became overt in the Chaos–Light sequence in *The Creation* and elsewhere in his late sacred vocal music. Many works that were later taken as humorous he did not intend as such, for example the 'Farewell' Symphony. Similarly, even at his wittiest or most programmatic he never abandons tonal and formal coherence.

The duality between earnestness and wit is analogous to the 18th-century distinctions between connoisseurs ('Kenner') and amateurs ('Liebhaber'), and between traditional or learned and modern or *galant* style. These dualities characterize many of Haydn's works, groups of works and even entire periods. In his pre-Esterházy instrumental music, genre was a primary determinant of style: modest, unpretentious divertimentos, quartets and keyboard concertinos etc. stand seemingly opposed to larger-scale symphonies, string trios and keyboard trios. The three op.20 quartets with fugal finales project, in order of composition, severe tradition (no.5), the *galant* (no.6) and a studied mixture of both (no.2); yet these monuments to high art originated precisely in the middle of his baryton-trio decade. In the late 1770s most of his symphonies were unambiguously intended as entertainment, but no.70 is selfconsciously learned. In 1785–90 he composed some 45 weighty symphonies, quartets and piano works, but also lyre concertos and notturnos, flute trios and other light works. Of course, the distinction between 'art' and 'entertainment' cannot be simplistically correlated with differences in artistic quality. Haydn's early string quartets are arguably his most polished pre-Esterházy works; the baryton trios and lyre notturnos are finely wrought compositions, as rewarding in their way as the raw expressionism of the 'Sturm und Drang'. These stylistic dualities are found even in his late sacred vocal music and long hindered its appreciation. His quotation of the *buffa*-like contredanse from no.32 of *The Creation* in the *Schöpfungsmesse* so offended the empress that she insisted that he alter it in performances at the Habsburg court, many of her high-minded contemporaries took offence at the 'Tändeleien' (trifling) and dance-like triple metres in his late masses, and as recently as the 1970s noted authorities still wrote of the 'triviality' of the Kyrie of the *Missa in tempore belli*. Now, however, their stylistic heterodoxy seems as gloriously uplifting as that of *Die Zauberflöte*.

Haydn usually juxtaposes or contrasts stylistic dualities rather than synthesize them. Perhaps he approaches synthesis most closely when an ostensibly artless or humorous theme later changes in character (e.g. Symphony no.103, minuet) or is subjected to elaborate contrapuntal development; the latter is especially characteristic of finales (e.g. Symphony no.99; Beethoven twice copied out the development section). In general, Haydn's art is based on the traditional principle of variety within unity. 'Once I had seized upon an idea', he said to Griesinger, 'my whole endeavour was to develop and sustain it in keeping with the rules of the art'. A Haydn movement works out a single basic idea; the 'second theme' of his sonata forms is often a variant of the opening theme. Often this part of the exposition forswears thematic statements altogether, in favour of unstable developmental passages (his 'expansion section'); stability is restored only in the position of the usual closing theme. To be sure, that working out usually entails many contrasting treatments and effects (Haydn: 'light and shade', i.e. chiaroscuro): the second theme usually differs in treatment, and the recapitulation brings fresh developments; in his double-variation slow movements the alternating major and minor themes are usually variants of each other. Thus both novelty and continuity are maintained from beginning to end.



In one respect, however, Haydn deliberately courted a union of opposites: his 'popular' style that simultaneously addressed the connoisseur. 'If one wanted to describe the character of Haydn's compositions in just two words, they would be . . . *artful popularity* or *popular* (easily comprehensible, effective) *artfulness*' (Triest). No other composer – not even C.P.E. Bach or Mozart – had Haydn's gift of writing ostensibly simple or folklike tunes of wide appeal, and broadly humorous sallies, that concealed (or developed into) the highest art. Indeed these aspects of his style intensified in his London and late Vienna years, along with the complexity of his music and its fascination for connoisseurs. One of the best early comments on Haydn's music was Gerber's: he 'possessed the great art

of *appearing* familiar in his themes' (emphasis added): that is, their popular character is neither merely given nor a direct reflection of his personality, but the result of calculated artistic shaping. This becomes obvious when he employs folk tunes, as in the Andante of Symphony no.103 and the finale of no.104: the piquant raised fourth-degree of the one, the horn pedal of the other, are not quoted, but adapted to the character of a grand symphony. Haydn's 'pretension . . . to a simplicity that appears to come from Nature itself is no mask but the true claim of a style whose command over the whole range of technique is so great that it can ingenuously afford to disdain the outward appearance of high art' (Rosen, I1971).

Many aspects of Haydn's music can be appreciated only by ignoring the concept of 'Classical style'. These include lean orchestration (Haydn: 'no superfluous ornaments, nothing overdone, no deafening accompaniments'), in which the planes of sound do not compactly blend but remain distinct, nervous bass lines, constant motivic-thematic development and a rhythmic vitality and unpredictability that can become almost manic, as in the finales of many late string quartets and piano trios. Many Haydn movements are progressive in form, continually developing (e.g. the first movements of Symphonies nos.92 and 103); on a still larger scale, many works exhibit tendencies towards through-composition or 'cyclic' organization; a few are as tightly integrated as any work of Beethoven (e.g. the 'Farewell' Symphony and no.46; the string quartets op.20 no.2, op.54 no.2 and op.74 no.3; Piano Sonata no.30).

Haydn was also a master of rhetoric. This is a matter not only of musical 'topoi' and rhetorical 'figures' but also of contrasts in register, gestures, implications of genre and the rhythms of destabilization and recovery, especially as these play out over the course of an entire movement. Referential associations are common in his instrumental music, especially symphonies (nos.6–8, 22, 26, 30–31, 44–5, 49, 60, 64, 73, 100); they invoke serious human and cultural issues, including religious belief, war, pastoral, the times of day, longing for home, ethnic identity and the hunt. Haydn told Griesinger and Dies that he 'often portrayed moral characters in his symphonies' and that one early Adagio presented 'a dialogue between God and a foolish sinner' (unidentified; perhaps from no.7, 22 or 26). In his vocal music Haydn (like Handel) was a brilliant and enthusiastic word-painter. This trait is but one aspect of his musical imagery in general: in addition to rhetorical figures and 'topoi' it comprises key associations (e.g. E♭ with the hereafter), semantic associations (e.g. the flute with the pastoral) and musical conceptualizations (e.g. long notes on '*E*-wigkeit' in *The Creation* or 'ae-*ter*-num' in the late *Te Deum*).

Like all 18th-century composers, Haydn composed for his audiences (which term includes his performers). He calculated Piano Sonata no.49 expressly for Mme Genzinger; in his piano works of 1794–6 he systematically differentiated between a difficult, extroverted style for Therese Jansen and a less demanding, intimate one for Rebecca Schroeter. Regarding the Piano Trio HXV:13 he wrote to Artaria: 'I send you herewith the third trio, which I have rewritten with variations, to suit your taste' – i.e. Artaria's estimate of the taste of Haydn's market. When he went to London, his music for public performance became grander and more brilliant. He disliked having to compose without knowing his audience, as he wrote regarding *Applausus*: 'If I have perhaps not divined the taste of [the musicians], I am not to be blamed for this; neither the persons nor the place are known to me, and the fact that they were concealed from me truly made my work distasteful'.

11. *Title-page of Haydn's 'Erdődy' Quartets op.76 (Vienna: Artaria, 1799)*

'I was never a hasty writer, and always composed with deliberation and diligence', Haydn told Griesinger. His method encompassed three stages: 'phantasieren' at the keyboard in order to find a viable idea (see above), 'komponieren' (working out the musical substance, both at the keyboard and by means of shorthand drafts, usually on one or two staves) and 'setzen' (writing the full score). Sketching was a regular procedure: although drafts survive for only a modest proportion of his music, they comprise works in all genres and all types of musical context (including recitatives). A draft for the finale of Symphony no.99 confirms Griesinger's description of his use of numbered cross-references to organize a series of passages originally written down in a different order. His surviving autographs by and large are fair copies, which exhibit few corrections and alterations.

8. SACRED VOCAL MUSIC. Vocal music constitutes fully half of Haydn's output. Both his first and last completed compositions were mass settings, and he cultivated sacred vocal music extensively throughout his career except during the later 1780s, when elaborate church music was inhibited by the Josephinian reforms, and the first half of the 1790s in London.

The *Missa brevis* in F (HXXII:1) is apparently his earliest surviving composition; on rediscovering it in old age he pronounced himself pleased by 'the melody and a certain youthful fire' (Dies), which are enhanced by

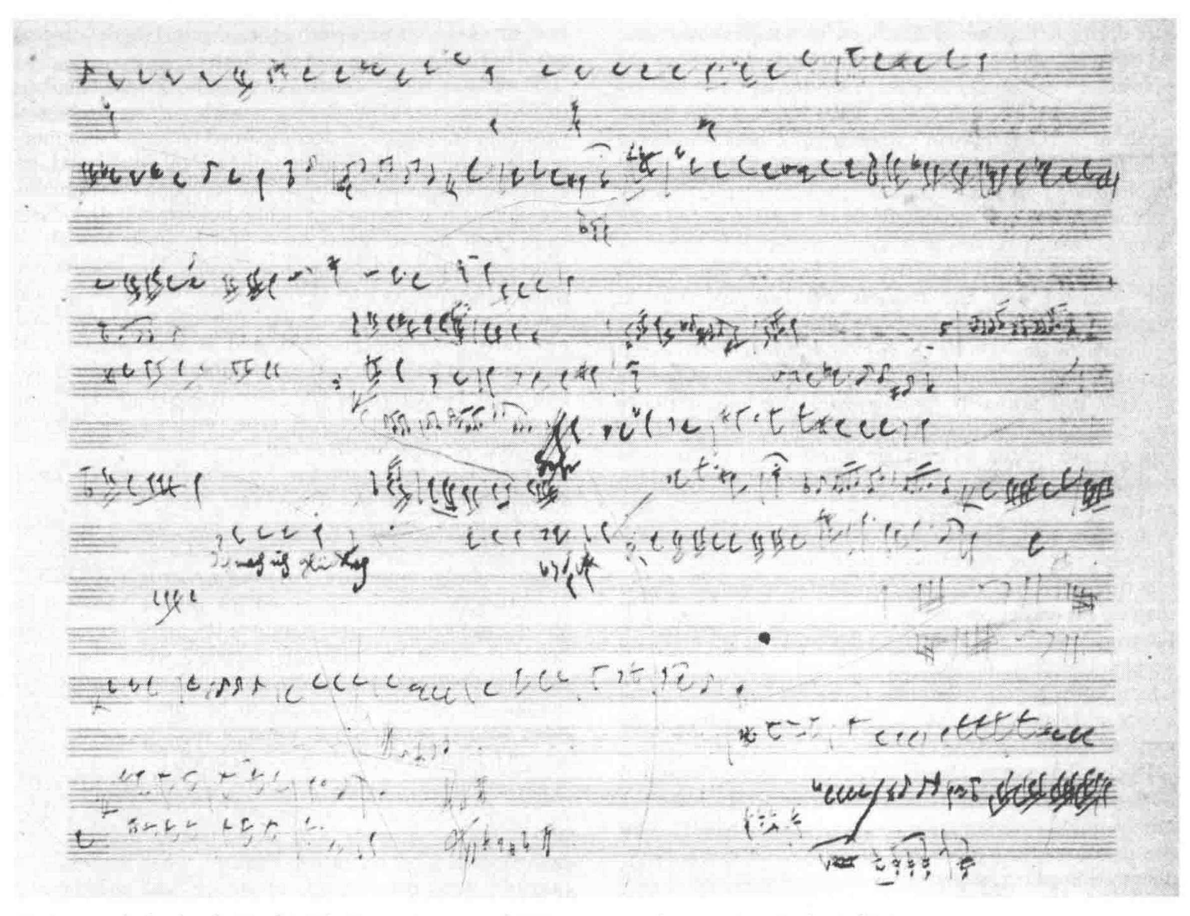
resourceful contrasts between the two solo sopranos and the chorus. The remaining masses fall into two groups of six each: nos.2, 4–8 (1766–82; no.3 is probably spurious) and nos.9–14 (1796–1802); except where noted they are of medium length (30 to 40 minutes). The former are notably heterogeneous. The huge and impressive *Missa Cellensis* in C (begun 1766) is of the *solenne* type (often miscalled 'cantata mass'); each of the five main sections is subdivided into numerous complete and independent movements. These include choruses both festive and ominous, elaborate arias, ariosos, ensembles and four massive concluding fugues. The Kyrie and certain arias are traditional in style, while the remainder is distinctly modern; the fugues are powerfully expressive despite their contrapuntal fireworks, especially the overwhelming 'Et vitam venturi', which functions not merely as a concluding highpoint but as the through-composed goal of the entire Credo. The *Missa 'Sunt bona mixta malis'* (1768) survives only in an autograph fragment transmitting the Kyrie and the first part of the Gloria; it is not known whether Haydn completed the work, and the import of 'mixed good and bad' (from a classical proverb) remains obscure. It is set for chorus and organ continuo in *stile antico*; strict fugal expositions alternate with free counterpoint and occasional homophonic passages. The 'Great Organ Mass' in E♭ (*c*1768–9) is more personal in tone: the dark english horns contrast with exuberant treble obbligato organ parts in the Kyrie, Benedictus and Dona nobis pacem. The *Missa Sancti Nicolai* (1772) is often described as 'pastoral', owing to its key of G major and the lilting 6/4 rhythm of the Kyrie (which returns for the Dona nobis pacem), although the Crucifixus and Agnus Dei are serious indeed. In the mid-1770s followed the 'Little Organ Mass' in B♭, a quiet, almost pietistically fervent *missa brevis*. The 'Mariazellermesse' in C (1782) resembles the *Missa Cellensis* in key, scoring and purpose, although it is more compact and more closely allied with sonata style.

Notwithstanding their semi-private function for the Esterházy court, Haydn's six late masses are consummate masterworks that exhibit no trace of provinciality or the 'occasional'. He exploits the complementary functions of soloists and chorus with inexhaustible freedom and telling effect; owing to his London experience the orchestra plays a newly prominent role. Four are in B♭, perhaps because *b♭″* was Haydn's usual highest pitch for choral sopranos (he employed the same key for the final choruses of Parts 2–3 of *The Creation* and Part 1 of *The Seasons*). The other two are the only ones for which he provided descriptive titles: the *Missa in tempore belli* ('Mass in Time of War', 1796) in C features the bright, trumpet-dominated sound typical of masses in this key; the *Missa in angustiis* ('Mass in [times of] Distress', later nicknamed 'Nelson Mass', 1798) in D minor and major is scored for a dark orchestra comprising only trumpets and timpani, strings and organ. Both invoke the travails of the Napoleonic wars. The Agnus Dei of the former includes threatening timpani motifs and harsh trumpet fanfares, while the Benedictus of the latter culminates in another harsh fanfare passage 'out of context'; both influenced the Agnus Dei in Beethoven's *Missa solemnis*. On the other hand, except for the sombre Kyrie and Benedictus of the 'Nelson Mass', both are otherwise firmly optimistic; the ending of the latter is downright jaunty.

Although Haydn's late masses indubitably reflect the experience of the London symphonies, their symphonic character has been exaggerated. Even in the Kyrie, which usually consists of a slow introduction and a fast main movement, the latter freely combines fugato and sonata style in a distinctly unsymphonic way. The Gloria and Credo are divided into several movements, fast–slow–fast with the slow middle movement(s) in contrasting keys and featuring the soloists (e.g. the 'Qui tollis' of the *Missa in tempore belli*, a bass aria with solo cello in A major; or the 'Et incarnatus' of the *Heiligmesse*, based on Haydn's canon *Gott im Herzen*); they usually conclude with a fugue on a brief subject, which often enters *attacca* and always leads to a homophonic coda. The Sanctus often adopts the 'majesty' topic, admixed with mysterious passages; it leads directly into the brief 'Pleni sunt coeli – Osanna', which may or may not return following the Benedictus. The latter is a long movement and an emotional highpoint; it usually features the soloists and is in, or based on, sonata form. The Agnus Dei opens with an initial slow section, either threatening in the minor or serenely confident in a remote major key; it leads to a half-cadence and thence to the fast 'Dona nobis pacem', usually a free combination of fugato and homophony, leading (again) to a homophonic wind-up.

The other liturgical works date primarily from the first half of Haydn's career; their original destinations and purposes are almost entirely unknown. According to liturgical function they comprise offertories (HXXIIIa), Marian antiphons (HXXIIIb), hymns (HXXIIIc) and pastorellas (HXXIIId; Haydn called them 'cantilenas'). They vary widely in style and scale, from the massive, dark, traditional *Stabat mater* (HXX[bis], 1767) to the tender devotion of the *Lauda Sion* hymn complexes; from the festive jubilation of the choral *Te Deum* settings with trumpets and drums in C to the stylized folk idiom of the pastorellas for solo voices and strings. Even subgenres exhibit marked contrasts: the *Lauda Sion* hymns from the 1750s (HXXIIIc:5) are all in C, Vivace 3/4, while those from the later 1760s (HXXIIIc:4) are in a tonally interesting set of four different keys and alternate Andante 3/4 with Largo alla breve. Similarly, the *Salve regina* in E (HXXIIIb:1, 1756) features ornate italianate writing for the solo soprano, whereas that in G minor (HXXIIIb:2, 1771) is expressively brooding, with no trace of vocal ornamentation. Of the three late works, the offertory *Non nobis, Domine* in D minor (HXXIIIa:1, ?1780s) is an *a cappella* work reminiscent of the *Missa 'Sunt bona mixta malis'*, while the six 'English psalms' of 1794 (HXXIII, Nachtrag), Haydn's only Protestant church music, adumbrate the elevated but plain style of 'The heavens are telling' in *The Creation*. The late *Te Deum* 'for the empress' (HXXIIIc:2, ?1800), for chorus and very large orchestra, is an *ABA* construction of great power and terseness; it whirls through the very long text in little more than eight minutes, while still finding time for a double fugue and an immense climax at the end.

Haydn's oratorios comprise *Il ritorno di Tobia*, his revision of Friebert's arrangement of the *Seven Last Words*, *The Creation* and *The Seasons*. The libretto of *Tobia* (by a brother of Boccherini) narrates the story of the blind Tobit from the Apocrypha; Haydn fashioned a magnificent late example of Austrian-Italian vocal music, comprising chiefly long bravura arias, along with three choruses; most of the recitatives are *accompagnati* of



emotional intensity. In 1784 he revived the oratorio, shortening many of the arias, adding two magnificent new choruses and supplementing the instrumentation. The *Seven Last Words*, a success during Haydn's lifetime and beyond, is less popular today, in part because it is not a full-length work, in part owing to the succession of eight consecutive adagios which, paradoxically, seem more monotonous than in the orchestral version. Its most striking movement is the bleak, newly composed introduction to the second part, scored for wind alone and set in A minor, a key Haydn hardly ever used.

*The Creation* is Haydn's most loved work today, as it was in his lifetime. Part 1 treats the First to Fourth Days (the creation of light, land and sea, plant life, heavenly bodies), Part 2 the Fifth and Sixth (animals, birds, fish, man and woman); each Day comprises recitative on prose from Genesis, a commentary set as an aria or ensemble, another recitative and a choral hymn of praise. Part 3 abandons the Bible; it amounts to a cantata devoted to Adam and Eve and to further praise of heaven. The optimistic tone is enhanced by the increasing brilliance and complexity of the choruses as the work proceeds; they reflect Haydn's experience of Handel in England. Also reminiscent of Handel (not that Haydn needed the stimulus) are the many word-and scene-paintings, of which the most striking include the emergence of the oceans and mountains ('Rolling in foaming billows'), the sunrise and moonrise, the birds of 'On mighty pens' and the teeming low strings of 'Be fruitful all'; though often taken as humorous, these conceits are essential to the Enlightenment optimism of the work. The famous 'Representation' or 'Idea of Chaos' (*Vorstellung* implies both meanings) is not literally chaotic but paradoxical: beginning in C minor mystery, it initiates a larger process which points beyond itself, and acquires meaning only with the choral climax on 'And there was light!' in C major. The remainder of Part 1 takes place, as it were, during the reverberation of this event; its triumphant concluding chorus 'The heavens are telling' is again in C. By contrast, the final sections dealing with ourselves shift to the 'human' key of B♭ and its subdominant E♭. Although Part 3 opens in a radiant, astonishingly remote E major for the Garden of Eden, it soon reverts to F and C for the gigantic 'Lobgesang' and, via E♭ for Adam's and Eve's lovemaking in earthy Singspiel style, to B♭ for the final choral fugue.

The libretto of *The Seasons* presents scenes of nature and country life; the narrator-function is personified as the moralizing peasants Simon, Jane and Lucas. The scenic aspects stimulated Haydn to his best efforts: the storms of late winter, the farmer sowing his seed to the tune of the Andante of the 'Surprise' Symphony, a sunrise that outdoes that in *The Creation*, the thick C minor fogs of early winter, and the multi-movement depiction of summer heat, first languid, then oppressive, finally exploding in Haydn's greatest storm. Among the genre scenes those for the chorus are unsurpassed, notably at the end of Autumn: first the hunt, from sighting to chase to kill to celebration (the horns quote numerous actual hunting calls, and join the trombones and strings in double grace notes for the baying of the hounds), and cast in progressive tonality from D to E♭; then the drinking chorus in C, with increasingly uncertain harmonizations of a prominent high note for the raising of glasses, a dance in 6/8 leading to an inebriated fugue and a breathless wind-up that may have inspired the end of Verdi's *Falstaff*. Other important choruses are pastoral ('Komm, holder Lenz') and religious: 'Ewiger, mächtiger, gütiger Gott' at the end of Spring, Haydn's most massive chorus (itself run on from the preceding trio, the two movements as a whole in 'progressive tonality'); and the concluding 'Dann bricht der grosse Morgen an', in which we enter heaven in a blaze of C major glory, resolving the C minor of the beginning of Winter. Notwithstanding its less exalted subject, *The Seasons* is compositionally more virtuoso than *The Creation* and offers greater variety of tone: Haydn's pastoral is one of the final glories of a tradition that is more than 'high' enough.

In Haydn's sacred vocal music the aesthetics of through-composition is a matter not only of cyclic integration, but of doctrine and devotion. Many of these works are organized around the conceptual image of salvation, at once personal and communal, achieved at or near the end: a musical realization of the desire for a state of grace. This is especially clear in a relatively brief work such as the *Salve regina* in G minor, where the astonishing vocal entry on an augmented sixth chord is not really resolved until the end, when Haydn 'hears' the supplicants' prayer by turning to the major. Particularly in his late sacred music such concepts are wedded to the sublime: not only in the Creation of Light, which expresses that which is otherwise unthinkable – the origins of the universe and of history – but also in the choruses that conclude each part of *The Creation*, 'Spring' and 'Winter' in *The Seasons* and many movements of the late masses.

9. Secular vocal music. Haydn's stage works comprise 13 Italian operas, four Italian comedies (with spoken dialogue rather than recitative), five or six German Singspiele and incidental music for plays, of which only Symphony no.60, 'Il distratto', survives; almost all were composed for the Esterházy court. Those predating 1766 are lost, except for fragments of the *festa teatrale Acide* (1762, revised 1773) and of the *commedia Marchese* (1762–3). His three operas from the late 1760s become increasingly long and complex. The two-act intermezzo *La canterina* (1766) has wonderful comic scenes centring on the jealous singing teacher Don Pelagio and his charge Gasparina (who 'overreacts' to being thrown out of his house with a distraught aria in C minor); each act ends with a quartet. *Lo speziale* (1768), in three acts, is called a *dramma giocoso* and is based on a libretto of this type by Goldoni, but the Esterházy version eliminates the two *parti serie*. It has many new features, including a 'Turkish' aria with 'exotic' key-relations and rhythms and a graphic portrayal of the effects of the apothecary's remedies for constipation. The concluding trio and quartet of the first and second acts, respectively, include real dramatic action. The three-act *Le pescatrici* (1769–70), also based on Goldoni, is a true *dramma giocoso* including the 'serious' Prince Lindoro and Eurilda, an heiress to a principality who has been raised as a simple fisherwoman; their music is in 'high' style, and Eurilda (in distinction to the eponymous fisherwomen) takes no part in the comic ensembles. It has more ensembles, in proportion to its total length, than any other Haydn opera, although the majority are 'choruses' in primarily homophonic style. Among the latter is the Act 3 'Soavi zeffiri', whose E major tonality and depiction of sea breezes resemble Mozart's 'Placido è il mar' in *Idomeneo* and 'Soave sia il vento' in *Così fan tutte*.

*12. Autograph sketches for Haydn's 'The Seasons', composed 1799–1801 (D-Bsb autogr. Jos.Haydn 50, f.2v)*

After a pause, in 1773 Haydn composed *L'infedeltà delusa*, a 'burletta per musica' in two acts based on a libretto by the 'reforming' librettist Marco Coltellini. For the last time there are no serious characters; the opera portrays an idealized peasant life (with much lampooning of the nobility) and the characters are concerned only to set their mismatched affections aright. From the same year comes the German *Philemon und Baucis*, originally a marionette opera but surviving only in an adaptation for the stage. The moralizing plot is based on the old theme of the god or king who is spiritually renewed by the incorruptible virtue of simple peasants; musically it is similar to *L'infedeltà*, with the addition of impressive D minor music in the overture and a thunderstorm chorus preceding Jupiter's arrival.

Most of Haydn's remaining operas for Eszterháza are in three acts and are *drammi giocosi* or other subgenres that mix comic and serious characters. In 1775 he composed *L'incontro improvviso* on a libretto adapted from Gluck's *La rencontre imprévue*; it is a harem-rescue plot set in the orient, as in Mozart's *Die Entführung aus dem Serail*, although many incidents lack sufficient motivation. The heroine Rezia and her rescuer Prince Ali are the serious characters, while lower-class characters provide broad 'exotic' humour. In a subplot Rezia uses her confidantes Balkis and Dardane to test Ali's fidelity (the gender-reversal is noteworthy); their Act 1 trio in the harem, with three sopranos sharing chromatic lines full of suspensions, is an invocation of timeless pleasure. In 1777 followed *Il mondo della luna*, based on Goldoni's popular libretto; the hero Ecclitico dupes the elderly Buonafede into supposing he has travelled to the moon (staged as an exotic, luxurious kingdom) and eventually into assenting to Ecclitico's marriage to his daughter Clarice (and two other marriages for good measure). The keys C and E♭ symbolize Earth and Moon respectively, the representation of the journey in the Act 1 finale being particularly magical, as is the Act 3 duet for the two principals. *La vera costanza* (1778–9, revised 1785), on a libretto by Francesco Puttini previously set by Anfossi, is Haydn's fullest exploration of the 'sentimental' subgenre of *opera buffa*. Rosina, secretly married to the half-mad Count Errico, lives incognito in a fishing-village. Eventually the Count and many other characters discover her, leading to repeated painful tests of her virtue and fortitude; in despair she flees to the country, where the final reconciliation takes place. The music is glorious and the characterizations surprisingly credible, with Rosina reaching heights of genuine emotion. The finales to Acts 1 and 2 are now (and largely remain) as long and complex as those in Mozart's operas.

A change of pace is represented by *L'isola disabitata* (1779), a relatively brief *azione teatrale* on a libretto by Metastasio, with all the recitatives orchestrally accompanied, and quite short, primarily lyrical arias without much coloratura. Next came *La fedeltà premiata* (1780), a *dramma pastorale giocoso* by G.B. Lorenzi, previously set by Cimarosa as *L'infedeltà fedele*; given the contrived

plot-spring of the annual sacrifice of two lovers to appease an offended sea monster, the action and motivations are plausible. The number of arias in serious style is relatively high, with a climax in Celia's great scena in Act 2; the finale in Act 1 is Haydn's longest (822 bars). *Orlando paladino* (1782) is a *dramma eroicomico* with a libretto by Nunziato Porta based on Badini. Its subject is Orlando's madness (deriving ultimately from Ariosto's *Orlando furioso*), which Haydn portrays in remarkable scenes of mixed accompanied recitative and aria; the long scenes for Angelica and the feckless Medoro are musical highlights as well, as are the comic numbers for Orlando's squire Pasquale. *Armida* (1783) is a *dramma eroico* based on the Armida-Rinaldo action from Tasso's *Gerusalemme liberata*. It is primarily *seria* in style, with long stretches of action set in freely alternating accompanied recitatives and set pieces; the long magic forest scene of Act 3 is particularly successful. *L'anima del filosofo, ossia Orfeo ed Euridice* (1791), an *opera seria* in four acts composed in London to a libretto by Badini, was not produced. Notwithstanding numerous bravura arias, its style resembles that of Haydn's late instrumental works more closely than do his earlier operas; in Act 2 the extended scenes of Eurydice's death and Orpheus's discovery of her body are deeply affecting. It also includes numerous choruses, which contribute to the action; he uses males for the Furies and females for the Bacchae, the latter bringing the work to a tragic end in D minor.

During his career Haydn's operatic palette expanded both generically, from straight *buffa* or *seria* to various mixed types (reflecting the repertory as a whole), and compositionally, with longer individual numbers, interpenetration of accompanied recitative and set piece, and increased size and scope of the finale (except in *seria*). Notwithstanding his own high opinion of his operas (see §6), they were largely forgotten until the second half of the 20th century, when editions and recordings as well as stagings made them widely available. Their recent reception has been mixed. The music is beyond praise: the brilliance of Haydn's tonal and formal construction and his rhythmic verve go without saying; masterly too are his vivid characterization in arias, expressive strength in accompanied recitatives and fascinating orchestral effects; he often composes 'against the grain' of the genre or libretto to dramatic purpose. For these reasons (as well as their ready availability), they have attracted much analytical and critical attention. On the other hand, although the librettos represent major types and their thematic orientation is often strong, they often exhibit weaknesses of plausibility, motivation or dramaturgy; even Haydn's music cannot always overcome these faults, nor did he always exploit the dramatic implications of his librettos. For example, when deceptions are revealed in the Act 2 finales of *Lo speziale* and *Il mondo della luna*, the musical character does not change until later, when the people deceived (Sempronio, Buonafede) give vent to outbursts of rage; and Eurydice's second death remains anticlimactic (although here the libretto is also at fault). However, negative criticism has also been coloured by insufficient understanding of generic norms of the period 1760–80 (such as the dominance of aria over ensemble and 'seamless' action, and the relative brevity of the third act), and by inappropriate comparisons with Gluck and late Mozart instead of with Gassmann, Anfossi or Cimarosa. In appropriate stagings with good singers, Haydn's operas are effective and moving in the theatre.

The festive Italian cantatas honouring Prince Nicolaus (HXXIVa:1–5, *c*1762–7) begin with a long orchestral ritornello leading to an accompanied recitative announcing the cause for celebration, followed by arias and duets and concluding with a chorus. The very long solo numbers are unusually virtuoso and richly orchestrated (in an aria from *Qual dubbio ormai*, no.4, Haydn wrote himself an elaborate obbligato harpsichord part). The celebratory cantata *Applausus* (HXXIVa:6, 1768) on an allegorical Latin text is stylistically similar, although it is longer and musically more concentrated, and as appropriate to its elevated text has been said to adumbrate the sublime. An important late chorus is *The Storm* (HXXIVa:8, 1792); as in so many works of this type, minor-mode fury is followed by 'calm' in the major.

Three late solo cantatas for soprano are of great significance. *Miseri noi* (HXXIVa:7, by 1786) was composed for an unknown occasion and singer (possibly Nancy Storace); the middle section, a Largo in G minor, is particularly impressive. *Arianna a Naxos* (HXXVIb:2, ?1789) was perhaps composed for Bianca Sacchetti in Venice; in the passionate recitatives the piano presents the lion's share of the musical material, while the voice declaims the text dramatically. Ariadne's mixed hope and despair are vividly portrayed; in her final aria a long, slow, formal paragraph in F major leads to a wild rage aria in F minor, of which the final chord, for piano alone, is astonishingly F major. *Berenice, che fai* (HXXIVa:10, 1795), on a text from Metastasio's *Antigono*, is public music for a virtuoso and hence more difficult and extroverted. The recitatives feature what is arguably Haydn's most extreme use of remote and enharmonic modulations; further, the two arias are in 'opposed' keys (E major and F minor), while the orchestration is as brilliant as that of the last London symphonies.

Haydn's 47 songs (HXXVIa) comprise 24 German lieder (nos.1–24, 1781–4), 14 English songs (nos.25–36, 41–2, 1794–5, of which nos.25–36 were published as 'Canzonettas') and miscellaneous German lieder. The lieder of 1781–4 stand in close chronological and stylistic proximity to the op.33 quartets. Although they have seemed simple to many commentators – they are relatively short and strophic, with the piano right hand largely doubling the voice – they are varied in mood and exhibit subtle rhythmic and formal construction, often brilliantly realizing implications of the text; the 1784 set includes more deeply felt items. The English canzonettas contain many striking effects and are in many cases through-composed; see the remarkable off-tonic vocal entry of *She never told her love*, with its climax on 'smiling with grief', or the controlled passion of O *Tuneful Voice*: the poem invokes Mrs Hunter's sorrow at Haydn's departure, the music his farewell to her and to England. A special case is the 'Emperor's Hymn' (see §5), with its fusion of elevated hymn and 'folk' styles. The 13 partsongs (*mehrstimmige Gesänge*; HXXVc, 1796–9) with keyboard accompaniment adumbrate the characteristic 19th-century Viennese genre of social music for vocal ensemble. Haydn said of them that they were composed '*con amore* in happy times and without commission' (Griesinger); as far as we know they (and his canons) are his only works of which this is true. They are among his wittiest, most beautiful and most touching creations, with an inimitable air of casual

sophistication and a brilliant combination of comic and serious topics and styles; their fusion of easy intelligibility and wit with the highest art and their ravishing part-writing almost suggest string quartets for voices.

10. Orchestral music. Although Haydn's sobriquet 'father of the symphony' is not literally true, in a deeper sense it is apt: there is no other genre in Western music for which the output of a single composer is at once so vast in extent (106 works: HI:1–104, 107–8), so historically important and of such high artistic quality. His pre-Esterházy symphonies (most composed for Count Morzin) comprise nos.1, 37 and 18 (the earliest); 2, 4–5, 10–11, 17, 19–20, 25, 27, 32, 107; and possibly 3 and 15. All are scored for two oboes, two horns and strings except for no.32 (with trumpets) and perhaps nos.27 and 37 (in which the parts for horns and oboes respectively may not be original); the majority are in three movements, fast–slow–fast. The distinction between a relatively weighty first movement and a faster finale is already present; the interior movement for strings alone is only moderately slow (Andante) and 'light' in style. Only nos.3 and 20 exhibit the later standard four-movement pattern; in nos.32 and 37 the minuet precedes the slow movement (found also in nos.108, 44, 68). In nos.5 in A and 11 in E♭ (the only ones in keys this distant from C), the slow movement comes first and is a weighty Adagio, producing the sequence slow–fast–minuet–fast with all four movements in the tonic (found also in nos.21–2, 34, 49). These early symphonies combine Italian and Austrian, light and serious, traditional and up-to-date features. Notwithstanding their limited outward dimensions, they are masterful; many exhibit considerable thematic integration (no.15) or manipulate generic norms to artistic effect (the opening movements of nos.15 and 25 are unusual in form, in ways that relate to the character and ordering of the succeeding movements); in no.3 the finale combines fugue and sonata form.

Haydn's years as Esterházy vice-Kapellmeister (1761–5) were his most productive as a symphony composer, with about 25 works (nos.6–9, 12–16, 21–4, 28–31, 33–4, 36, 39–40, 72, 108(B)); nos.35, 38 and 58–9 from about 1766–7 are similar. They exhibit great variety of style, subject matter and orchestral treatment, although the common notion that they constituted a distinctly 'experimental' phase is untenable. Their stylistic élan and virtuoso brilliance are attributable to the splendour of the court and the professional players now at Haydn's disposal. One finds works for connoisseurs (nos.6–8, 13, 21–2, 31), others that seek to entertain (nos.9, 16, 33, 36, 72, 108) and still others that combine both stances (nos.34, 39–40). A few present an apotheosis of the chamber symphony: at ease, yet refined and profound (nos. 28–9, 35). Extra-musical aspects are present not only in the *Matin–Midi–Soir* trilogy (see §3(i)) but also nos.30 ('Alleluja'), 31 ('Hornsignal'), and perhaps 22 ('The Philosopher') and 59 ('Fire', a modern nickname deriving from its supposed origin as incidental music). Although a few symphonies are still in three movements (nos.9, 12, 16, 30), four is now the norm. Concertante scoring is prominent not only in nos.6–8 but in nos.9, 13, 14, 16, 31, 36, 72 and 108; a special effect found in this period alone is the use of four horns rather than the usual two (nos.13, 31, 39, 72).

Haydn's symphonies of the years around 1770 (nos.26, 41–9, 52, 65) are widely described as exemplifying his *Sturm und Drang* style; those of 1773–4 (nos.50, 51, 54–7, 60, 64), while less extreme, have many points of contact with it. The most commonly cited feature is the minor mode – of Haydn's ten symphonies in the minor, six fall between 1765 and 1772 – although most works remain in the major, and most of the novel stylistic features are independent of mode. These include remote keys (no.45, 'Farewell', in F♯ minor and major, and no.46 in B major), rhythmic and harmonic complexities, expansion of outward dimensions and harmonic range, rhythmic instability, extremes of dynamics and register, greater technical difficulty, increased use of counterpoint (e.g. in the canonic minuet of no.44, 'Mourning'), musical ideas that seem dynamically potential rather than self-contained, and contrast within themes instead of merely between them. The slow movements and finales become more nearly comparable to the first movements in size and weight; in the former the violins play *con sordino* and the tempo is usually slowed to Adagio. No.26 ('Lamentatione') has religious associations and no.49 ('La passione') may have as well. The programmatic nos.45–6 (they seem to be a pair) are integrated in a through-composed, end-orientated manner not seen again until Beethoven's Fifth Symphony.

From about 1775 (in some respects 1773) to 1781 Haydn again changed his orientation. Symphonies nos.53, 61–3, 66–71 and 73–5 are primarily in a light, even popular style (only no.70 is an exception), perhaps reflecting his resumption of operatic composition in 1773; indeed nos.53, 62, 63 and 73 include adaptations of stage-music (see §3(iii)), as had nos.50 (1773) and 60 (1774) before them. This stylistic turn has been interpreted as a kind of relaxation, or even as an outright selling out, but it is better understood as representing the distinct artistic stance of entertainment. They are easy (as Haydn was to say of nos.76–8), but superbly crafted, and abound in striking and beautiful passages, not to mention witty and eccentric ones: works of comic genius that approach the *buffa* stage. The slow movements exhibit new formal and stylistic options (the hymn-like no.61, the exquisitely 'popular' theme in no.53, the play of comic and serious in no.68, the ethereal dream in no.62), while the finales adumbrate rondo and hybrid forms. Slow introductions become important about 1779 and begin to create tangible links to the allegros (nos.53, 71 and 73).

During the 1780s Haydn's style changed again, as he began to sell his symphonies abroad, in 'opus' format (see §3(iv) above). Although in many respects nos.76–81 (1782–4) are still 'easy', they include superb movements such as the opening Vivace of no.81 and the finales of nos.77 (with its contrapuntal development) and 80 (with its cross-rhythm theme). In nos.78 and 80 Haydn returns to the minor, although from no.80 on he usually ends such movements in the major, and places the entire finale in the major as well. The Paris symphonies (nos.82–7) are the grandest he had yet composed. Nos.87, 83 and 85 (1785) already have a new *esprit*, a combination of learned and popular style, consistency of musical argument and depth of feeling; see the slow movements of nos.83 and 87 and the outer movements of no.85 (the opening Vivace is particularly graceful and harmoniously constructed). In nos.82 and 86 (1786) the trumpets and drums lend added brilliance and the outer movements are on a still larger scale; the Capriccio of no.86 is one of Haydn's most original slow movements. All these features

*13. Opening page of the autograph MS of Haydn's Symphony no.104 in D ('London'), composed 1795 (D-Bsb)*

characterize nos.88 and 90–92 as well (no.89 falls off somewhat). Nos.88 and 92 are the best-known: the former boasts concentrated, in part contrapuntal, outer movements, while the gorgeous Largo theme is set off by entries of the trumpets and drums (withheld from the first movement for this purpose); the latter features an unusually close integration of slow introduction and Allegro, a beautiful Adagio, rhythmically intricate trio and Haydn's sprightliest and wittiest finale to date.

Haydn's London symphonies (nos.93–104) crown his career as a symphonic composer. Not only do they outdo the Paris symphonies stylistically, but he produced them in person for rapturous audiences; this interaction stimulated him to ever bolder and more original conceptions. Nos.95–6 (1791) most nearly resemble the preceding symphonies, although no.95 in C minor has a gripping opening movement dominated by a striking unison motto, an ominously terse minuet and a brilliant sonata-fugal finale in C major (possibly influenced by the finale of Mozart's 'Jupiter'). Those given in 1792 (nos.93–4, 97–8) respond to Haydn's public: in no.94 the famous outburst in the Andante is actually the least remarkable 'surprise'; the opening Vivace reaches new heights of tonal wit and expansive brilliance, and the concluding sonata-rondo is the first to exhibit the blend of rhythmic vitality, playful surprise, larger scale and underlying cogency of argument that distinguish Haydn's London finales. These last features are found in nos.97–8 as well, along with a new romanticism in the opening movement of no.97 (the breathtaking diminished 7th chord in bar 2, which returns at several key points, and the remote flat-side modulations in the recapitulation); in no.98 Haydn composed an extended fortepiano obbligato for himself in the coda of the finale.

The last six symphonies are even more brilliant (clarinets are added, except in no.102); Haydn's determination to conquer new territory with each work is palpable. No.99 in E♭ is his most elaborate symphonic essay in remote tonal relations; it also features a particularly warm slow movement (in G major), with extensive wind writing (much commented on at the time). No.101 ('Clock') has by far the longest minuet and trio Haydn ever composed and a particularly brilliant rondo finale. No.100 ('Military') rapidly became his most popular, owing to the slow movement based on a romance (from the lyre concerto HVIIh:3), overlaid by massive percussion outbursts that audiences found deliciously terrifying. No.102 is the least 'characteristic' of these six, yet one of the greatest; its most remarkable movement is the Adagio (identical in musical substance to that in the F♯ minor Piano Trio HXV:26), in which the exposition is repeated in order to vary the instrumentation, with muted trumpets and drums. No.103 ('Drumroll') offers Haydn's most telling invocation of the sublime in instrumental music, by means of an astonishing double annunciation: first the 'intrada' *fortissimo* drum roll, then the mysterious bass theme (resembling the 'Dies irae'), which dominates the Allegro as well and, even more astonishingly, interrupts the recapitulation near the end. No.104 begins with a massive dotted motif on the 5th D–A, which some commentators describe as dominating the entire symphony (fig.13); the first movement is one of Haydn's freest and the finale has greater relative weight than that in any other of the London symphonies.

Besides the symphonies Haydn's orchestral music comprises the six early *Scherzandi* (HII:33–8), a few miscellaneous symphonic movements, overtures and instrumental numbers from operas and oratorios, incidental music, more than 100 minuets (many lost), of which the most important are the magnificent minuets and German dances HIX:11–12 (1792), and four late marches. He also composed numerous concertos, both for melody instruments (many of them lost) and for keyboard. Of the former, the most important are two virtuoso early

Esterházy works: the Violin Concerto in C (HVIIa:1) and the massive Cello Concerto in C (HVIIb:1), and two late works: the Concertante (HI:105, 1792) and the Trumpet Concerto (1796), composed for Anton Weidinger's 'keyed' trumpet (a forerunner of the valve trumpet). The six concertos for two *lire organizzate* (HVIIh:1–5; the sixth is lost), commissioned by the King of Naples in 1786, represent a special case; restricted to the keys of C, G and F and by the technical limitations of the instruments, they are Haydn's shortest and most modest concertos, though delightful in every way.

Haydn's three earliest keyboard concertos (1756 to *c*1761) were probably composed for organ, although they were more widely disseminated as harpsichord works; HXVIII:1 in C (?1756) is his earliest surviving large-scale instrumental composition, while no.3 in F is an unusual double concerto for organ or harpsichord and violin. Later came nos.4 in F (probably *c*1770) and 5 in G (probably the early 1770s), both for harpsichord, and no.11, the Piano Concerto in D (*c*1783–4), Haydn's only popular work in this genre. A distinct subgenre comprises the early concertinos (HXIV:11–13, XVIII:F2), not easily distinguished from a group of similar, probably soloistic divertimentos (HXIV:3, 4, 7–10); all are tiny works for harpsichord, violins and bass, mainly in C. Although finely crafted, his keyboard concertos are less original and less popular than his symphonies, perhaps in part because he favours the middle register (except in no.11), eschews both overt and technical display and cantabile writing (except in slow movements), and includes many sequential passages. (These features reflect a particular stylistic orientation, not limitations on Haydn's imagination or his prowess as a performer. The old canard that he was a mediocre keyboard player has long been laid to rest; his statement to Griesinger that 'I was no mean keyboard player and singer' was clearly an understatement, for he continued, 'I could also perform a concerto on the violin'.)

11. CHAMBER MUSIC WITHOUT KEYBOARD. Haydn's chamber music centres on his 68 string quartets, a genre of which he was more nearly the literal 'father' than the symphony. (The traditional figure of 83 included the spurious op.3, three genuine early works that are not quartets, op.1 no.5 and op.2 nos.3 and 5, and the *Seven Last Words*, but omitted the early HII:6, 'op.0'.) His earlier quartets were composed in three discrete groups separated by long pauses: the ten early works for Baron Fürnberg (in the mid- to late 1750s), opp.9, 17 and 20 (in the years around 1770) and op.33 (1781). Each group offers a different solution to the technical and aesthetic aspects of the genre while cumulatively enlarging the resources of quartet style. The Fürnberg quartets already take the soloistic ensemble for granted, including solo cello without continuo. They belong to the larger class of ensemble divertimentos, with which they share small outward dimensions, prevailing light tone (except in slow movements) and a five-movement pattern, usually fast–minuet–slow–minuet–fast. Even on this small scale, high and subtle art abounds: witness the rhythmic vitality, instrumental dialogue and controlled form of the first movement of op.1 no.1 in B♭; the wide-ranging development and free recapitulation in the first movement of op.2 no.4 in F, and the pathos in its slow movement; and the consummate mastery of op.2 nos.1–2.

Opp.9, 17 and 20 established the four-movement form with two outer fast movements, a slow movement and a minuet (although in this period the minuet usually precedes the slow movement). They also – op.20 in particular – established the larger dimensions, higher aesthetic pretensions and greater emotional range that were to characterize the genre from this point onwards. They are important exemplars of Haydn's *Sturm und Drang* manner: four works are in the minor (op.9 no.4, op.17 no.4, op.20 nos.3 and 5); and nos.2, 5 and 6 from op.20 include fugal finales. Op.20 no.2 exhibits a new degree of cyclic integration with its 'luxuriantly' scored opening movement (Tovey, N1929–30), its minor-mode Capriccio slow movement which runs on, *attacca*, to the minuet (which itself mixes major and minor), and the combined light-serious character of the fugue. Op.17 no.5 and op.20 also expand the resources of quartet texture, as in the opening of op.20 no.2, where the cello has the melody, a violin takes the inner part and the viola executes the bass.

In op.33 these extremes are replaced by smaller outward dimensions, a more intimate tone, fewer extremes of expression, subtlety of instrumentation, wit (as in the 'Joke' finale of no.2 in E♭) and a newly popular style (e.g. in no.3 in C, the second group of the first movement, the trio and the finale). Haydn now prefers homophonic, periodic themes rather than irregularly shaped or contrapuntal ones; as a corollary, the phrase rhythm is infinitely variable. The slow movements and finales favour *ABA* and rondo forms rather than sonata form. However, these works are anything other than light or innocent: no.1 in B minor is serious throughout (the understated power of its ambiguous tonal opening has never been surpassed), as are the slow movements of nos.2 and 5. Op.33 has been taken as marking Haydn's achievement of 'thematische Arbeit' (the flexible exchange of musical functions and development of the motivic material by all the parts within a primarily homophonic texture); although drastically oversimplified, this notion has had great historiographical influence. These quartets' play with the conventions of genre and musical procedure is of unprecedented sophistication; in thus being 'music about music', these quartets were arguably the first modern works.

The appearance of op.33 was the first major event in what was to become the crucial decade for the Viennese string quartet, as Mozart and many other composers joined Haydn in cultivating the genre. Indeed, all the elements of Classical quartet style as it has usually been understood first appeared together in Mozart's set dedicated to Haydn (1782–5). He responded in opp.50, 54/55 and 64 by combining the serious tone and large scale of op.20 with the 'popular' aspects and lightly worn learning of op.33. The minuet now almost invariably appears in third position; the slow movements, in *ABA*, variation or double variation form are more melodic than those in op.33; the finales, usually in sonata or sonata-rondo form, are weightier. Haydn's art is no longer always subtle; the opening of op.50 no.1 in B♭, with its softly pulsating solo cello pedal followed by the dissonant entry of the upper strings high above, is an overt stroke of genius, whose implications he draws out throughout the movement.

Haydn's quartets of the 1790s adopt a demonstratively 'public' style (often miscalled 'orchestral'), usually attributed to his experience in London (op.71/74 was composed for his second visit there); the fireworks for Salomon in the exposition of op.74 no.1 in C are an obvious example of this new style. Without losing his grip on the essentials

*14. Autograph MS of Haydn's String Quartet in C, op.20 no.2, composed 1772 (A-Wgm)*

of quartet style or his sovereign mastery of form, he expands the dimensions still further, incorporating more original themes (the octave leaps in the first movement of op.71 no.2), bolder contrasts, distantly related keys (from G minor to E major in op.74 no.3) etc. Opp.76–7, composed back in Vienna, carry this process still further, to the point of becoming extroverted and at times almost eccentric: see the first movements of op.76 no.2 in D minor, with its obsessive 5ths, and of op.76 no.3 in C, with its exuberant ensemble writing and the gypsy episode in the development, or the almost reckless finales of nos.2, 5 and 6 and op.77. He experimented as well with the organization of the cycle: op.76 nos.1 and 3, though in the major, have finales in the minor (reverting to the major at the end), while nos.5–6 begin with non-sonata movements in moderate tempo (but a fast concluding section), so that the weight of the form rests on their unusual slow movements (the Largo in F♯ of no.5, the tonally wandering Fantasia of no.6).

In his earlier years especially, Haydn composed extensively in other chamber genres. His surviving authenticated ensemble divertimentos (HII) consist of one string quintet (no.2), numerous mixed works including three in nine parts (nos.9, 17 and 20), one each in eight and seven (nos.16 and 8), two sextets for strings and two horns (nos.21–2) and two more for melody instruments (nos.1, 11), as well as at least five works for wind, four sextets (nos.3, 7, 15 and 23) and a tiny piece for two clarinets and two horns (no.14). Most of them exhibit the same five-movement cyclic pattern as the early string quartets, with the difference that contrasts in instrumentation become a basis of style, for example in reduced scorings in trios and slow movements or extended soloistic passages. Although some of the mixed works (nos.1–2, 9, 11 and 20) are among the earliest and are on average the least compelling, the slightly later nos.8, 16–17, and 21–2 are on the same high level as the quartets. The wind band works seem to date from about 1760–61; they are even smaller in scale but unfailingly masterful.

By contrast, the 21 authenticated string trios (HV:1–21, by 1765) are works for connoisseurs in 'high' style, difficult for player and listener alike, in a wide range of keys (three in E, one in B, two even in B minor). All are scored for two violins and (presumably) cello except no.8 (violin and viola) and are thus related to the trio sonata tradition, although the first violin dominates more than it participates in dialogue. They are in three movements (except no.7, in two), with a bewildering variety of cyclic patterns; many begin with a slow movement and most include a minuet. The 126 baryton trios (HXI; *c*1762–75) are similar in that they are music for a (particular) connoisseur and always in three movements with a minuet (except no.97 with seven: 'fatto per la felicissima nascita di S.Al.S. Prencipe Estorhazi'). Although the baryton takes the leading role, they include much dialogue and 'thematische Arbeit'; three late works (nos.97, 101 and 114) include fugues. They are intimate music, modest rather than ambitious, with a narrow range of keys (dictated by the baryton's technical limitations); Haydn's ability to fashion genuine art within such restricted conditions is remarkable.

In the middle and late 1770s Haydn's production of chamber music fell off markedly. One last group of baryton works comprises the important octets HX:1–6 (mid-1770s); they are richer in scoring and on a larger scale than the trios. The six violin-viola duets (HVI:1–6) are likewise from the mid-1770s; the violin dominates and the style seems somewhat old-fashioned. The six string trios from the early 1780s (HIV:6–11) and the four flute trios from London (HIV:1–4, 1794–5) are amateurs' music, with small dimensions, simple textures and restriction to two or three movements. By contrast, the eight lyre notturnos for the King of Naples (HII:25–32, 1788–90), of unfailing charm and true 'chamber' disposition, offer a wonderful synthesis of play and art.

12. KEYBOARD MUSIC. Haydn's keyboard works comprise solo sonatas (HXVI), trios (HXV) and quartet-divertimentos (HXIV). In 18th-century thought and practice these constituted a single, loosely defined genre, destined primarily for private performance and orientated on the topic of sentiment, seen as the natural expressive mode for music performed solely or primarily by an individual at the keyboard; indeed Haydn often adopted a selfconsciously improvisatory style, especially after 1780. During the 1760s these keyboard works were apparently composed for the harpsichord. The first clear (albeit indirect) evidence of composition for the fortepiano (or possibly clavichord) is found in the highly expressive Sonata no.20 (1771), with mannered dynamic marks. Nevertheless, most works from the 1770s may have been conceived for the harpsichord or neutrally for both instruments. Beginning in the early 1780s, and decisively from the late 1780s on, Haydn composed for the fortepiano. Many of his keyboard works were composed for ladies, whether students in his early years, the Auenbrugger sisters around 1780, or intimates such as Mme Genzinger, Mrs Schroeter and Therese Jansen. The majority are in three movements: either fast–slow–fast, or a fast movement, slow movement and minuet in various permutations. Two-movement works are also common, often slow–fast; numerous slow movements in penultimate position are run on, *attacca*, to the finale. Even in the 1780s and 90s many works end with an outwardly modest movement such as a Tempo di menuetto, a set of variations or a simple rondo. Neither the two- and three-movement cyclic patterns nor the modest finales were 'conservative' or 'immature', as has been claimed; they are as finely wrought as quartet finales and exemplify the prevailing generic orientation of intimacy.

Haydn's early keyboard works are both serious and *galant*. The trios HXV:f1 in F minor and 1 in G minor and the Sonata no.2 in B♭ (with its astonishing Largo) are more intellectually difficult and stylistically uncompromising than all the early quartets and most of the early symphonies; many works are small and unpretentious and were presumably written for students and amateurs. At least 12 weighty connoisseurs' sonatas originated in the late 1760s and early 1770s, including nos.19, 20, 45, 46 and seven lost works. Two sets in mixed style followed, nos.21–6 (1773) and 27–32 (1774–6); they include serious works such as the boldly formed nos.22 in E and 26 in A, the passionate no.32 in B minor and the through-composed no.30 in A, as well as numerous lighter works, especially in the 1774–6 set. In 1780 followed Haydn's first publication with Artaria, the heterogeneous nos.35–9 and 20, including the 'easy' no.35 in C, the virtuoso no.37 in D and the serious no.36 in C♯ minor. The three modestly scaled sonatas nos.40–42 (published 1784) are miracles of popular appeal allied with high art, especially no.40 in G. Except for no.51 in D, for Mrs Schroeter, Haydn's last five sonatas eschew any pretence of modesty. In the late 1780s he composed no.48 in C, with a fantasy-like slow variation movement and a dashing sonata-rondo finale, and the intimate no.49 in E♭ for Mme Genzinger; its brilliant first movement has an unusually long coda and the *ABA* Adagio is richly expressive, with continual variations of the theme. From London come two virtuoso sonatas for Jansen: nos.50 in C and 52 in E♭. The former features a remarkable first movement which, though in sonata form, is based on continual variation of a basic motif; the latter is on the largest scale throughout and features a slow movement in the remote key of E major (a tonal relation adumbrated in the development of the first movement and wittily 'cancelled' at the beginning of the finale).

Of Haydn's few keyboard works outside the sonatas, the most important are two capriccios – *Acht Sauschneider müssen sein* in G (HXVII:1, 1765), a variation rondo with an immense tonal range, and HXVII:4 in C (1789), another tonally wide-ranging work with elements of sonata rondo form, perhaps stimulated by a Fantasia from C.P.E. Bach's sixth collection of *Clavier-Sonaten . . . für Kenner und Liebhaber* (1787) – and the F minor Variations for piano HXVII:6 (1793), arguably Haydn's most original and concentrated double-variation movement, with a coda (added in revision) of Beethovenian power.

Haydn's piano trios have been undervalued, in part because of the great distance between their original generic identity and today's conceptions. 18th-century keyboard trios (like violin sonatas) were understood as 'accompanied sonatas': the keyboard dominates, the cello mainly doubles the left hand of the piano in a pitch-class sense, and even the violin is generally more accompanimental than soloistic, although it often receives sustained melodies in second themes, slow movements, minuet trios and rondo episodes. Nevertheless the strings are essential, for integration of the texture, tone colour and rhythmic definition. The effort to hear Haydn's 27 late piano trios (HXV:5–31, 1784–96) with 18th-century ears is worth making: after the quartets they comprise his largest and greatest corpus of chamber music. No.12 in E minor (1788–9) has an opening movement of astonishing seriousness with vast expansions towards the end, while the beautiful siciliano slow movement and the ebullient rondo finale are both in E major. No.14 in A♭ (1789–90) includes his first slow movement in a remote key (E major, or ♭VI, adumbrated by B major in the development of the first movement). From London, nos.24–6 (1794–5), dedicated to Schroeter, include no.25 (with the famous 'Gypsy Rondo') and no.26 in the special key of F♯ minor: following a concentrated and brooding Allegro and a gorgeous Adagio in F♯ major (identical in substance with the Adagio of Symphony no.102), the minuet-finale is anything other than anticlimactic. It begins dissonantly on a dominant 9th and this instability is maintained throughout: there is no tonic cadence until the very last bar of the *A* section, just before the double bar, and in the reprise even this cadence is deceptive, leading to a substantial coda. Rosen praises its 'intimate gravity . . . a melancholy so intense it is indistinguishable from the

tragic', while Landon conjectures that the work may represent Haydn's farewell to Mrs Schroeter (the key is suggestive). By contrast, nos.27 in C and 29 in E♭ (1795–6), dedicated to Jansen, are difficult and extroverted; no.29 is particularly original in construction, and both have rollicking finales that outdo any earlier ones.

13. HAYDN'S CAREER. Haydn's career never stimulated a paradigmatic narrative comparable to that of Beethoven's three periods. To be sure, decisive breaks occurred in 1761 (his move to the Esterházy court), 1790 (to London) and 1795 (back to Vienna); the periods 1750–61, 1791–5 and 1795–1802 are distinctive regarding both the conditions of his life and his compositional activity. However, the first and last of these are brief in proportion to his career as a whole and cannot bear the weight that 'early' and 'late' do in Beethoven's case. Furthermore, in any such reading Haydn's 30 years at the Esterházy court remain a long, uninterpreted 'middle'. Its only major dividing-points that affected both his life circumstances and his compositional orientation were 1766, when he became full Kapellmeister, 1776, when he became responsible for the court opera, and 1779, when he negotiated his independence as composer of instrumental music. Hence except for 1761–5 the Esterházy years seem best understood in terms of a series of overlapping phases, each defined by different criteria (see §3).

In the 20th century too much was made of the supposedly evolutionary aspects of Haydn's career, in part because of its association with the notion of the rise of 'Classical style' (*see* CLASSICAL). This led to a threefold periodization after all, but one modelled mechanically on the traditional interpretation of artists' careers: apprentice – journeyman – master. In Haydn's case this took the form: immaturity/composition within existing style – experimentation/searching for a new style – maturity/'Classical style'; the last was assumed to be his overriding stylistic 'goal', which he finally 'achieved'. The oldest and most persistent of these interpretations associated Classical style with *thematische Arbeit* and the string quartets op.33 of 1781. Another proposed a double progression: towards a first highpoint with his *Sturm und Drang* manner around 1768–72, and a second one with the Paris symphonies and the *Seven Last Words* of 1785–6. These notions are not facts, however, but constructions, placed in the service of stylistic narratives of the 'per ardua ad astra' type, more ideologically focussed and psychologically reassuring than explanatory. To be sure, other things equal, a later work of Haydn will be more complex and concentrated than an earlier one; indeed his music often became 'more so' within a single genre over a few brief years; for example the string quartets opp.9, 17 and 20 or the London symphonies. And he certainly experimented compositionally, as is clear from his own account of 'becoming original'. But even his earliest music was never in any intrinsic sense immature, and he continued to experiment, successfully, throughout his career. From about 1755 on, Haydn's music was technically masterful, generically appropriate and rhetorically convincing; every one of his works is best appreciated today in terms of these three modes of understanding, applied in concert.

## WORKS

Editions: *Joseph Haydns Werke*, ed. E. Mandyczewski and others, 10 vols. (Leipzig, 1907–33) [M]

1766 = composed 1766; [1766] = year of composition 1766 not documented; –1766 = composed by 1766; –?1766 = possibly composed by 1766
— signifies the absence of the work from the category concerned; i.e. not in H, not authenticated, not pubd etc.
Items are numbered chronologically (as far as possible) within each category (except in section Z); these numbers are always shown in italics and are used for cross-references between sections (e.g. E *23*).
Where not specified, bn may often double the bass part.
Instrumental parts that are doubtful or are later additions (sometimes by Haydn himself) are parenthesized or given a question mark.

*Remarks*: sonetto no.28 from Petrarch: *Canzoniere* (no.xxxv)

*Note:* Ah come il core (HXXIVa, Anh.4), see E *21* (HW xxv/10, 380); Costretta a piangere, see E *4*; Quel cor umano e tenero (HXXVa, Anh.) = Quel tuo visetto amabile, see E *22* (HW xxv/11, 237); Sono le donne capricciose = Dice benissimo (no.5)

Frag., E(E♭), *MGG1*, v, 1893, line 4 = Dice benissimo (no.5)

Unpubd secco recits, rev./composed Haydn, in A. Felici (?Sacchini): L'amore soldato, perf. Eszterháza, 1779, and Cimarosa: L'impresario in angustie, perf. Eszterháza, 1790

Recit and aria sung by Calcagni, London, 1792, and Cantata a voce sola con violino composed for the Duke of Bedford, unidentified or lost; see Landon (A1976)

*Appendix* F.1: Selected works attributed to Haydn

| No. | H | Title | Forces | Date | Edition | Remarks |
|---|---|---|---|---|---|---|
| *1* | XXVb:5 | Pietà di me, benigni Dei (terzetto) | 2 S, T, eng hn solo, bn solo, hn solo, 2 hn, str | ? | D 250 (1982) | Haydn's name on MS copies added later; considered as probably authentic by Landon (A1978, A1976) and by Larsen (B1941) |
| 2 | XXIVb:6 | Mora l'infido ... Mi sento nel seno (recit and aria) | S, orch | [1781] | — | extant are vocal part and 2 ob of recit, 2 vn (partly in Haydn's hand) and b of recit and aria; without author's name; incl. in Righini: Il convitato di pietra |
| *3* | XXVIb:1 | Er ist nicht mehr! (Deutschlands Klage auf den Tod des grossen Friedrichs, Borussens König) (cant.) | ?S, baryton (and ?) | 1786–8 | — | perf. Leipzig and Nuremberg, 1788, by Carl Franz; vocal part with bc extant; considered authentic by Landon (A1978) |
| *4* | XXIVb:21 | (aria) | ?S, 2 fl, 2 ob, 2 bn, 2 hn, str | –1788 | — | vocal part lost; without author's name; incl. in G. Sarti: I finti eredi; cf appxs X.1, *7*, Y.4, *1* |
| *5* | XXIVb:16bis | ?Occhietti cari del mio tesoro (aria) | ?T, 2 ob, bn, 2 hn, str | –1790 | — | vocal part lost; without author's name; incl. in Gassmann: L'amore artigiano; see F *16* |
| 6 | XXIVa:F1 | Pianger vidi appresso un fonte (cant.) | A, 2 ob, 2 hn, str | ? | (Munich, 1942) | probably not authentic |
| 7 | XXIIId:B2 | Veni tandem expectatus (aria) | S, str | ? | — | not sacred; without author's name; not a Haydn autograph |

*Note:* several anon. 'Teutsche Comoedie-Arien' (arias from Viennese Singspiele of 1750s) tentatively attrib. Haydn; 22 It. arias from Esterházy archives listed in Bartha and Somfai (E1960) as probably by Haydn, though no source with his name is known; more anon. arias from same archives mentioned in Landon (A1978) as possibly by Haydn

*Appendix* F.2: Revisions (mostly in Haydn's hand) of operatic works by other composers

| *No.* | H | *Title* | *Forces* | *Date* | *Edition* | *Remarks* |
|---|---|---|---|---|---|---|
| *1* | XXXIc:3 | Vi miro fiso | ?S, 2 ob, 2 hn, str | [aut. 1777] | — | aria from Dittersdorf: L'Arcifanfano re de' matti; altered and wind pts added |
| *2* | — | Non per parlar d'amore | ?S, orch | [July 1778] | — | aria by Salieri from pasticcio L'astratto; altered and 8 bars rewritten; see Bartha and Somfai (E1960), iii/2 |
| *3* | XXXIc:4 | ?Se provasse un pocolino | ?S, ? 2 fl, 2 ob, 2 hn, str | [Feb 1780] | — | aria from Anfossi: La forza delle donne, inc.; wind pts added and 2 vn rewritten; melody similar to F *11* |
| *4* | XXXIc:5 | Ah crudel, poiché lo brami | S, 2 fl, 2 hn, str | [April 1780] | (Salzburg, 1961) | aria from G. Gazzaniga: La vendemmia; 2nd half composed by Haydn |
| *5* | XXIVb:4 | ? | S, 2 ob, 2 hn, str | [July] 1780 | — | aria incl. in Salieri: La scuola de' gelosi; text lost, not Il cor nel seno; without author's name; score mostly rewritten and perhaps composed by Haydn |
| *6* | XXXIc:6 | Gelosia d'amore è figlia (2 versions) | S, 2 ob, 2 hn, str | [July 1780] | — | aria from Salieri, ibid.; altered, wind pts added, 34 bars of score added or rewritten; sketch in HW xxix/2, 82 |
| *7* | XXXIc:7 | Si promette facilmente | S, 2 ob, 2 hn, str | [Oct 1780] | — | aria from Anfossi: La finta giardiniera; completely rewritten |
| *8* | XXXIc:8 | Vorrei punirti indegno | S, 2 ob, 2 hn, str | [Oct 1780] | — | aria from Anfossi, ibid.; altered and wind pts added |
| *9* | XXXIc:9 | Non ama la vita | ?S, orch | [April 1781] | — | aria from Anfossi: Isabella e Rodrigo, ossia La costanza in amore; 2 bn and 6 bars added |
| *10* | XXXIc:10 | Che tortora | S, 2 ob, 2 hn, str | [Aug 1781] | — | aria from N. Piccinni: Gli stravaganti, ossia La schiava riconosciuta; 70 bars rewritten |
| *11* | XXXIc:11 | Una semplice agnelletta | S, orch | [Aug 1781] | — | aria from Piccinni, ibid.; altered, 14 bars added |
| *12* | — | Siam di cuor tenero | S, str (and ?) | [Aug 1781] | — | aria from Piccinni, ibid.; 8 (?7 + 3) bars rewritten; see Bartha and Somfai (E1960), iii/14 |
| *13* | — | Misera che farò | S, orch | [March 1782] | — | recit from Traetta: Il cavaliere errante; only 2 vn extant; not autograph; authenticity uncertain; see Bartha and Somfai (E1960), iii/23 |
| *14* | XXXIc:12 | Deh frenate i mesti accenti | ?S, 2 ob, 2 hn, str | [Sept 1782] | — | aria from Anfossi: Il curioso indiscreto; extensively rev., wind pts added, 2 fl, bn omitted |
| *15* | — | Dove mai s'è ritrovato | S, orch | [March 1784] | — | aria from Anfossi: I viaggiatori felici; 6 bars rewritten; see Bartha and Somfai (E1960), iii/16 |
| *16* | — | Ah mi palesa almeno | S, T, orch | [July 1786] | — | duet from Traetta: Ifigenia in Tauride; vocal parts and 2 bars of score rewritten; see Bartha and Somfai (E1960), iii/17 |

| No. | H | Title | Forces | Date | Edition | Remarks |
|---|---|---|---|---|---|---|
| *17* | XXXIc:15 | Se palpitar degg'io | S, ob, str (and ?) | [Aug 1788] | — | aria from Prati: La vendetta di Nino (Semiramide); 27 bars added |
| *18* | XXXIc:13 | Se voi foste un cavaliere | S, str | [Feb 1789] | — | aria from Cimarosa: I due supposti conti; completely rewritten |
| *19* | — | Quasi in tutte le ragazze | S, orch | [July 1789] | — | aria in pasticcio Circe (F *15*); 12 bars rewritten; see Bartha and Somfai (E1960), iii/20 |
| *20* | XXXIc:14 | Silenzio, miei signori | T/B, orch | [June 1790] | — | from quintet in Cimarosa: L'impresario in angustie; 25 bars added |

*Note:* HXXXIc:2 shows only minor alterations as do many other arias described in Bartha and Somfai; for added or altered parts not written by Haydn, and the revision therefore of doubtful authorship, see Bartha and Somfai (E1960), iii/8, 10, 11, 18

| *Remarks*: probably authentic; ?EK; also attrib. Wagenseil in MS copy, *A-El* | | | | | |
| 2 | XVIII:8 | Concerto (no.2), C | org/hpd, (2 hn/tpt, timp), 2 vn, b | –1766 | D 80 (1962) |
| *Remarks*: probably authentic; ?EK; orig. attrib. (L.) Hofmann in MS copy, *D-Bsb* | | | | | |
| 3 | XVIII:10 | Concertino (Concerto), C | org/hpd, 2 vn, b | –1771 | (Munich, 1969) |
| *Remarks*: probably authentic; ?EK; only extant MS copy, *A-Wgm*, as by 'Heyden' | | | | | |
| 4 | XIV:12 | Concerto (Partita, Concertino), C | hpd, 2 vn, b | –1772 [–*c*1767] | HW xvi, 10; D 323 (1969) |
| *Remarks*: probably authentic | | | | | |
| 5 | XIV:13 | Concerto (Concertino), G | hpd, 2 vn, b | –*c*1767 | HW xvi, 26; (Mainz, 1956) |
| *Remarks*: probably authentic; date 1765 not in Göttweig catalogue, contrary to preface in Mainz edn | | | | | |
| 6 | XVIII:F2 | Concerto (Concertino), F | hpd, 2 vn, b | –*c*1767 | HW xvi, 38; D 324 (1969) |
| *Remarks*: probably authentic | | | | | |
| 7 | XIV:C2 | Divertimento, C | hpd, 2 vn, b | –*c*1767 | HW xvi, 111; D 325 (1969) |
| *Remarks*: I and II probably authentic; III in HW xvi, 114, doubtful | | | | | |
| 8 | XIV:C1 | Divertimento, C | hpd, (?2) vn, b | –1772 [–*c*1767] | HW xvi, 105; D 534 (1976) |
| *Remarks*: ?authentic; allegedly not approved by Haydn in 1803; ? vn 1 lost; in edns as pf trio; ? str spurious | | | | | |
| 9 | XVIII:G2 | Concerto duetto, G | 2 hpd/pf, 2 hn, 2 vn, b | –1782 | (London, 1782) |
| *Remarks*: by J.A. Steffan (Šetková no.135) | | | | | |
| 10 | XVIII:7 | Concerto, F | org/hpd, 2 vn, b | –1766 | (Amsterdam, 1962), (Vienna, 1983) |
| *Remarks*: doubtful; considered probably authentic by Larsen (B1941); I and III later versions of pf trio, appx V.1, *8*; orig. attrib. Wagenseil in MS copy, *CZ-KRa* | | | | | |
| 11 | XIV:G1 | Partita (Divertimento), G | hpd, 2 vn, b | –1774 | — |
| *Remarks*: lost, doubtful; allegedly not approved by Haydn in 1803; not with 2 bn as in H | | | | | |
| 12 | XVIII:9 | Concerto, G | hpd, 2 vn, b | –1767 | (Mainz, 1967), HW xv/2, 131 |
| *Remarks*: doubtful; considered probably authentic by Larsen (B1941), spurious by Fruehwald (H1988) | | | | | |
| 13 | XVIII:Es1 | Concerto, E♭ | hpd, str | ? | — |
| *Remarks*: probably not authentic; orig. without author's name in only extant MS copy, *D-Bsb* | | | | | |
| 14 | XVIII:G1 | Concerto, G | hpd, 2 fl/ob, 2 hn, 2 vn, b | ? | — |
| *Remarks*: probably not authentic | | | | | |
| 15 | — | Concertino, D | hpd, 2 vn, vc | ? | — |
| *Remarks*: [XIV:]D1 in Brown (O1986); probably not authentic | | | | | |
| 16 | XVIII:F1 | Concerto, F | hpd, 2 fl, str | *c*1779/80 | (Berlin, 1927) |
| *Remarks*: by G.J. Vogler (6 leichte Clavierconcerte, no.6) | | | | | |
| 17 | XVIII:F3 | Concerto, F | hpd, str | –1766 | — |
| *Remarks*: probably by (J.G.) Lang | | | | | |
| 18 | — | Concerto (Kleines Konzert), F | hpd, (2 hn), str | –1775 | (Heidelberg, 1962) |
| *Remarks*: [XVIII:]F4 in Brown (O1986); by L. Hofmann | | | | | |
| 19 | XIV:C3 | Concerto (Quattro), C | hpd, 2 vn, b | –1766 | (Paris, *c*1776), as by Wagenseil |
| *Remarks*: by Wagenseil | | | | | |
| 20 | XIV:Es1 | Divertimento, E♭ | hpd, 2 vn, b | ? | — |
| *Remarks*: by J.A. Steffan (orig. for hpd solo) | | | | | |
| 21 | XIV:F1 | Quartetto concertant, F | hpd/harp, fl, vn/va, vc | –1774 | (Paris, 1777) |
| *Remarks*: by J. Schmittbauer; orig. for hpd/pf, fl, vn, vc | | | | | |

| No. | H | Title, key | Forces | Date | Edition |
|---|---|---|---|---|---|
| 22 | XIV:F2 | Concertante, F | pf, ob, vn, va, vc | –1782 | (London, ?c1785), as by J.C. Bach |

*Remarks*: not a Haydn autograph; by J.C. Bach

JAMES WEBSTER (text, bibliography), GEORG FEDER (work-list)

**Haydn, (Johann) Michael** (*b* Rohrau, Lower Austria, bap. 14 Sept 1737; *d* Salzburg, 10 Aug 1806). Austrian composer, younger brother of JOSEPH HAYDN. A prolific composer in many genres, he was especially admired for his sacred music.

1. Life. 2. Vocal works. 3. Instrumental works.

1. LIFE. Michael Haydn was born in the village of Rohrau on the Leitha river, near the current border of Austria and Hungary. He went to Vienna at the age of eight and entered the choir school at the Stephansdom, where he will have participated in numerous performances of sacred works by the most prominent Viennese composers, especially the Kapellmeister, Georg Reutter (ii). By his 12th birthday he was earning extra money as a substitute organist at the cathedral and had, reportedly, performed preludes and fantasies of his own composition. About 1753 his voice broke and he was dismissed from the choir school. After this he probably had some affiliation with the local Jesuit seminary; a biographical sketch of 1808 notes that he 'made rapid progress in Latin, ... obtained familiarity with classical literature', and Maximilian Stadler wrote that Haydn 'continued to perform on the organ together with Albrechtsberger in the Jesuit church' (*c*1816–25). Judging from a signed and dated score that he copied in 1757 of Fux's *Missa di S Carlo* (*A-Wn*), Haydn studied some of that composer's works during his formative Viennese years. The authors of the biographical sketch mention that he also studied works of Bach, Handel, Graun and Hasse. Stadler's history continues: 'Even during [Michael Haydn's] student

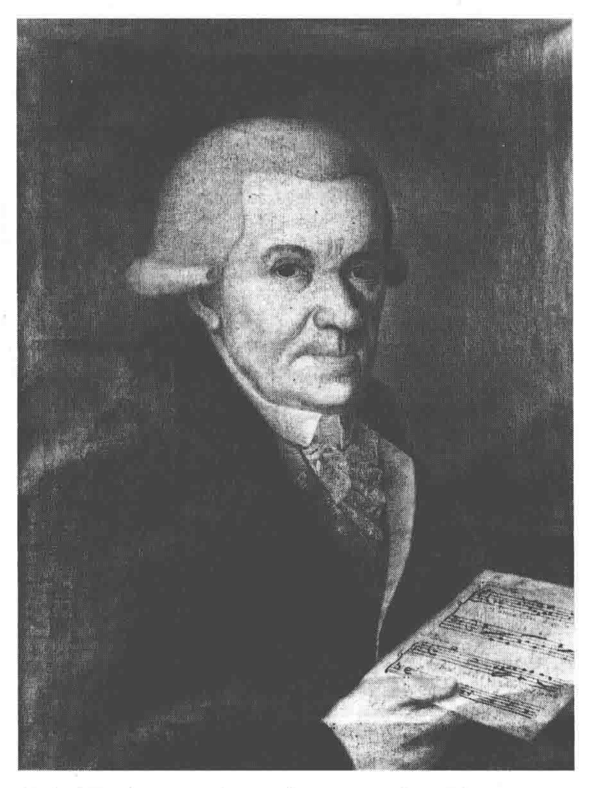
years he composed masses, litanies, hymns, Salve reginas etc., which, because of their correct setting and pleasing new taste, were taken in by everyone with great approval.' The genres mentioned here correspond remarkably well to a repertory of works known from performance parts copied at abbeys and parish churches in Lower Austria and Moravia between 1759 and 1763.

The biographical sketch suggests that Haydn left Vienna for Grosswardein (now Oradea, Romania) about 1757, although there is no evidence of his arrival there before April 1760. Dittersdorf, who succeeded Haydn there in 1765, later noted in his autobiography (1801) that Patachich augmented the Hofkapelle to 34 musicians on Dittersdorf's arrival in 1765; the forces at Haydn's disposal would therefore have been relatively meagre. The festive *Missa SS Cyrilli et Methodii* (1758), one of few dated works composed before 1760, was probably not conceived for such modest forces. Haydn's known compositions for Grosswardein are small in proportion and simple in their orchestration. Taken together, the pre-Salzburg works represent a formidable accomplishment: 15 symphonies, 14 masses, six divertimentos for three string instruments, several wind partitas and a few concertos, as well as a number of settings of Latin texts for four-part chorus with orchestra.

Haydn was apparently back in the vicinity of Vienna in 1762: a concert programme for one of the Durazzo academies in that year mentions a horn concerto 'de la Composition du S.r Michel Hayde', and details survive of a lost wind partita (ST59) bearing the inscription 'Posonii 22 Xbris 762'. It was perhaps during this time that he came to the attention of Count Vinzenz Joseph Schrattenbach, the nephew of Sigismund Christoph, Archbishop of Salzburg, who, according to the biographical sketch, recommended that Haydn be offered a position in Salzburg. From the quantity of Haydn's music that was copied for performances in eastern Austria during the 1750s and 60s, it would seem that he was quite well known throughout the region.

The death of J.E. Eberlin in 1762 led to a reshuffling of the prominent musicians in Salzburg and eventually to Haydn's appointment as court Konzertmeister. Among his colleagues were Leopold Mozart, A.C. Adlgasser, G.F. Lolli and later W.A. Mozart. On 24 July 1763 some 'Tafelmusique' by him was performed, and on 14 August he officially assumed his new position, which involved playing the organ (his principal instrument) as well as the violin. From then until the death of Archbishop Schrattenbach late in 1771, Haydn composed predominantly dramatic works for the theatre of the Benedictine University; *Die Schuldigkeit des ersten Gebots* (1767) was the result of a collaboration between Haydn, Adlgasser and the 11-year-old Mozart. Haydn and several other Salzburg musicians were in Vienna late in 1767 and there met the Mozarts. By mid-February he was back in Salzburg, and on 17 August 1768 he married Maria Magdalena Lipp (1745–1827), a singer in the Hofkapelle and daughter of the court organist, Franz Ignaz Lipp. The couple lived in an apartment owned by the Abbey of St Peter, for which Haydn composed a number of occasional works; he also performed on the organ there from time to time. The Haydns' only child, Aloysia Josepha, was born in 1770, but died within a year.

Hieronymus, Count Colloredo, was enthroned as Prince-Archbishop in March 1772, and he immediately instituted tighter fiscal controls which greatly restricted the activities of the university theatre. It was closed permanently in 1778. However, Haydn apparently thrived during the early years of Colloredo's rule, and by 1777 his status in Salzburg was such that he was said to be a candidate for the post of Kapellmeister. It was probably no coincidence that rumours of certain weaknesses surfaced about this time. A planned trip to Italy probably never materialized because Haydn was promptly given the position of organist at the Dreifaltigkeitskirche when Adlgasser died suddenly on 22 December 1777. Bitter that the position was not given to his son, Leopold Mozart, who had previously praised his colleague, described Haydn as prone to heavy drinking and laziness. Haydn composed his best-known works between 1771 and 1777: the Requiem ST155 (1771), the *Missa S Hieronymi* ST254 (1777) and the offertories *Tres sunt* ST183 (1772) and *Lauda Sion* ST215 (?1775). In 1782 he assumed the position of court organist, not long after W.A. Mozart vacated it. On the 1200th anniversary of the archiepiscopate, in the same year, Colloredo published a pastoral letter, the first of a series of proclamations intended to simplify church services. In response, Haydn composed about 100 settings of Mass Propers in a simple homophonic style between late 1783 and 1791. He was also named as editor of a second Salzburg edition (1790) of Johann Kohlbrenner's German hymnal (originally published in Vienna in 1777).



During the 1780s, Haydn completed 20 symphonies, some of which achieved a modest circulation outside Salzburg. Writing from Vienna in 1784, Mozart expressed his astonishment at how quickly he was able to obtain copies of Michael Haydn's most recent symphonies. A year later Artaria published editions of two symphonies (ST384, 393). Many of Haydn's orchestral marches and minuet cycles date from these years too. In the field of chamber music, he composed five divertimentos for mixed ensembles between 1785 and 1790, but he did not pursue the string quartet as an elevated genre.

During the 1790s Haydn enjoyed an expanding sphere of influence as a teacher of composition. One of his pupils, G.J. Schinn, left Salzburg in 1808 to take up a position in the Munich Hofkapelle, where Haydn's Latin and German sacred music continued to be performed regularly throughout the 19th century. Anton Diabelli, a pupil and friend, was involved in the publication of many of Haydn's sacred works by the Viennese publishing firm that later bore his name. Sigismund Neukomm was a pupil of Haydn in the 1790s before going to Vienna, where he studied with Joseph Haydn, perhaps on Michael's recommendation. The young C.M. von Weber came to Haydn in 1797 and learnt the fundamentals of harmony and counterpoint from him; and Franz Schubert, though never one of his pupils, visited Haydn's grave in Salzburg and included words of admiration for him in a letter to his brother Ferdinand.

Late in his life, Haydn made two trips to Vienna. He set out on the first in August 1798 and had returned to Salzburg by early November. In January 1801 his apartment was plundered by French soldiers, and this was possibly a catalyst for the second trip. By September 1801 he was again in Vienna rehearsing a mass commissioned by Empress Maria Theresia (ST796/797), who sang a solo part in a performance. In October the *Allgemeine musikalische Zeitung* reported that Haydn was to serve

as Kapellmeister to Prince Nicolaus Esterházy, a position that he evidently accepted but never actually filled. With the archbishop in exile, Haydn obtained a rise in salary from Archduke Ferdinand in 1803, and evidently entertained no further thoughts of moving. By April 1803 additional commissions for sacred works arrived from Vienna, and he completed a *Te Deum* for the empress (ST829) in September 1803. Her request for a mass for Emperor Leopold's nameday (ST837), however, took Haydn until December 1805 to fulfil, partly because of his recent induction into the Swedish Royal Academy of Music in 1803 and its commission not for new works but for scores of works already composed (Haydn's numerous copies of his own autograph scores remain in the library of the academy, *S-Skma*). On completing the mass, he began work on a requiem (ST838), commissioned by the empress, but owing to his declining health he never finished it. Although he expected the coming spring to bring an improvement in his health, it did not; and he died, with friends and students at his bedside, on 10 August 1806.

2. VOCAL WORKS. Haydn's sacred vocal music was viewed by most early 19th-century writers on the subject as superior to his instrumental and dramatic works. In a catalogue of his works (1814), his friend Rettensteiner described Haydn as 'the great, unique, inimitable master in the church style', possibly referring to his numerous contributions in the 'new' church style encouraged by the Austrian reformers of the late 18th century. E.T.A. Hoffmann even considered his church music superior to that of his brother Joseph. Like many 18th-century composers, Haydn cultivated the contrapuntal *stile antico*, especially in works for Lent and Advent. His setting of the gradual *Christus factus est* ST38 and the *Missa Crucis* ST56, both composed in Grosswardein in 1762, demonstrate the young composer's proficiency with Fuxian counterpoint. As late as 1796, Haydn still made use of *stile antico* in a collection of Mass Proper settings, *In coena Domini ad missam* ST628. The staggered vocal entries at the opening of the Requiem of 1771 (ST155) create a veiled reference to the austerity of Fuxian imitative counterpoint, one that must have impressed Mozart, who 20 years later opened his Requiem in similar fashion.

*Michael Haydn: portrait by an unknown artist, late 18th century (private collection)*

More prominent among Haydn's early sacred works are those in the florid Neapolitan style, in the spirit of Hasse and Caldara. Like his Viennese predecessors, he set each text in many sections, sometimes in a series of recitative–aria pairs concluding with a chorus. In the Mass Proper ST48 a setting of the text 'Vidi civitatem' in recitative proceeds to the virtuoso aria 'Caelestis inter caetus', for soprano with clarino trumpets, strings and organ, which concludes with a relatively brief choral Alleluia. In an Advent offertory composed in 1765 in Salzburg, *Ave Maria* (ST72), Haydn similarly recalls the florid Neapolitan style but integrates small choral passages into a single movement. Viennese concerted masses of the late Baroque in the so-called *stile moderno* were not unlike these Neapolitan offertories, especially in the solo numbers. Early in his career Haydn composed three such festive masses, which are steeped in the Viennese tradition of Reutter and Wagenseil: the *Missa SS Trinitatis* ST1 (1754), *Missa SS Cyrilli et Methodii* ST13 (1758), and *Missa S Josephi* ST16 (*c*1754–7). As well as solo voices, chorus and the standard church trio of two violin parts, bass and figured organ part, Haydn included clarino trumpets and timpani; in the first two masses he added a viola part *col basso*, and in the latter two a pair of trombones that play with the inner parts of the chorus. The 15-movement *Missa SS Cyrilli et Methodii*, the largest mass Haydn composed, includes low trumpets (*trombe*) as well. The violin parts in Haydn's early masses, like those in other Austrian works, feature persistent semiquaver scale motion, and the Gloria and Credo sections conclude with large fugal movements. Obbligato instrumental solos are common in the Benedictus; an example is the extended organ solo in the *Missa SS Trinitatis*, which belongs to the same tradition as Joseph Haydn's *Missa in honorem BVM* ('Great Organ Mass', H XXII:4). Haydn recalled the majesty of these mid-century masses later in his career with the Requiem on the death of Archbishop Schrattenbach in 1771 (ST155) and with the *Missa a due cori* composed for the Spanish court in 1786 (ST422).

The *stile antico* and *stile moderno* represent two extremes in Haydn's vocal music. He cast most of his works from the early 1770s onwards in a simple, homophonic style, favouring the top voice. The phrases in these works tend to be shorter, the cadences well defined and the melodies predominantly diatonic with some rhythmic interest, but without intricacies. One may look to the German sacred arias of Eberlin and Adlgasser as possible forerunners of Haydn's cantabile style. His earliest known sacred German arias, *O glorreiche Himmelssonne* ST168 and *Grosse Frau, wir rufen Dich* ST169, date from the early 1770s, but in his own dramatic works from the 1760s and early 1770s, most of which are in

German, the melodic, cadential and textural characteristics of the style are already present. In Haydn's contribution to the oratorio *Der Kampf der Busse und Bekehrung* ST106, composed in 1768, for instance, one encounters numbers in the florid Neapolitan vein together with cantabile arias. (Indeed, it was not unusual for movements in both styles to be extracted from these dramatic works as Latin contrafacta and pressed into service as offertories.) A simple homophonic style prevails as well in Haydn's numerous graduals of the 1780s and early 1790s and in most of the partsongs for men's voices that occupied him during the 1790s. The German settings place him in a position of some significance in the histories of both German sacred music and German song.

3. INSTRUMENTAL WORKS. Probably composed in the 1750s, the six divertimentos for two violins and bass (ST5–10) are Haydn's contributions to the most prevalent category of chamber music in Austria from about 1750 to 1770. Crisp, rhythmic themes with an almost Baroque perpetual motion dominate many of the movements. All but one have four movements including a minuet and trio; ST8 concludes with an *alla breve* fugue, and three of the trios are in the tonic minor of the preceding minuet, harking back to the partitas of Fux and Giuseppe Porsile. Haydn's early symphonies, too, favour the four-movement structure with minuet and trio. Among the sources of the eight surviving early symphonies, only one is a dated autograph, for a Symphony in E♭ composed in Grosswardein in 1760 (ST35). Haydn entitled it 'Partitta', a common designation for symphonies in the 1750s and early 1760s. Scored for the typical pair of violins, viola and bass, with pairs of oboes and horns, the work begins similarly to several of Joseph Haydn's early symphonies, with a slow first movement followed by a fast second (see, for example, H I:5, 6, 7 and 11).

Haydn transplanted several movements from some of his pre-Salzburg instrumental compositions into dramatic works for the Salzburg Benedictine theatre and into orchestral serenades. His first task on arriving in Salzburg, it seems, was to compose a serenade or Finalmusik, probably for the end of the academic year in August 1763. Although this work does not survive in its entirety, it is evident that Haydn assembled it mainly from movements of earlier works (including the Symphony ST62 and concerto ST52), probably completing it with several newly composed movements. Typically, such serenades began and ended with a march, between which were six or more additional movements, often including a couple of pairs of contrasting solo concerto movements. Haydn provided a second Finalmusik in August 1764, and at least one other, in August 1767. Mozart probably intended several of his Salzburg orchestral serenades as Finalmusik; the form was peculiar to Salzburg.

Chamber music figured less prominently in Haydn's output in Salzburg. In 1773 he composed a pair of string quintets (ST187 and 189), which are among his finest works. As in many of his works with strings, Haydn's disposition for incessant figuration prevails at times, though here he achieves a more conversational relationship between the players through his manipulation of intricate rhythmic detail throughout each of the parts. The development section and recapitulation in the first movement of the G major Quintet ST189 include one of the composer's favourite devices, the development of sequential material that served as a transition to the secondary thematic area in the exposition. Haydn also favoured inserting a false tonic recapitulation that later proves to be further development of the transition material. In his chamber works of the 1780s and 1790s, Haydn preferred combinations of winds with strings, and even when he did use four or five string parts, as in the quartets ST316 and 319 and the QuintetST412, he included multiple minuets (with trios) and marches rather than following a conventional three- or four-movement structure. A set of six string quartets (ST308-13) has traditionally been attributed to Michael Haydn, although there is no direct documentary evidence connecting the works to him. Their dimensions seem too small for them to be his work of the 1780s, and the sophisticated string writing is far beyond what he achieved in the quintets of 1773; their origin and authorship remain a mystery. Had Haydn actually composed a set of six quartets, one would expect that his friends and pupils, who went to such lengths to chronicle his life and works, would have mentioned his contribution to this most highly esteemed genre.

Symphonies and orchestral minuet cycles were Haydn's chief contributions to instrumental music in Salzburg. The symphonies from the 1770s have become more familiar than the later ones, because several make use of less conventional wind instruments such as english horns and whistles (e.g. ST188), yet the symphonies of the 1780s are of higher quality. Haydn composed about 20 symphonies between 1779 and 1789, and although these do not show the level of imaginative orchestration and thematic work of his brother's symphonies, they are mostly bold in their harmonic palette and in places ingenious in their structural and motivic unity. Almost all are three-movement works, without minuets and trios. Some of the symphonies have slow introductions or opening slow movements (ST358) and others conclude with vigorous fugato movements (ST287, 473, 478, 508). Haydn's cycles of orchestral minuets, which span his entire career in Salzburg, are scored for the normal combination of two violin parts and bass, usually with pairs of oboes and horns; he also used bassoons, clarinets, trumpets and timpani. Mozart was especially interested in obtaining copies of these works while travelling in Italy in 1770, and some have consequently been ascribed to him (K105*f*/61*f*, K61*g*) (see Lindmayr, 1992).

DWIGHT BLAZIN

**Haydn Society.** American music publisher and record company. It was set up in Boston in 1949, by H.C. Robbins Landon, with the primary aim of publishing a complete edition of Haydn's works, under the editorship of J.P. Larsen, but that was soon abandoned. It also aimed to issue recordings of major but previously unavailable works by Haydn. Among early issues were several masses and 29 symphonies, recorded in Vienna. The Society also obtained rights to nearly complete 1942–3 recordings of *The Creation* and *The Seasons* made in Vienna under Clemens Krauss by the former German Reichsrundfunk with the Vienna PO and the tenor Julius Patzak. Also recorded in Vienna were works by Mozart from newly prepared texts, notably *Idomeneo* and *Don Giovanni*. A projected complete Haydn series by Alexander Schneider's quartet was abandoned in 1954, 24 works short of completion. Although remarkable for their time, all these recordings have technical and musical limitations; many were prepared in considerable haste. However, in 1951–3 there appeared a small group of records of a high standard (including symphonies nos.43, 50 and 61) from the Danish EMI studio with the conductor Mogens Wöldike. Some Haydn Society recordings were issued in Britain by Nixa and the EMI group. The master tape archive was acquired in 1997 by Music and Arts Programs of America which plans CD releases where possible.

GRAHAM SILCOCK

**Haydon, Glen** (*b* Inman, KS, 9 Dec 1896; *d* Chapel Hill, NC, 8 May 1966). American musicologist, music educationist and composer. He studied music at the University of California, Berkeley (BA 1918, MA 1921), and later in Paris, taught in the Berkeley public schools (1920–25), and worked as a professional clarinettist in the San Francisco area. From 1925 he was a member of the music faculty at the university in Berkeley, serving as department chairman from 1929 to 1931. After further study at the University of Vienna he took the doctorate in 1932 with a valuable dissertation on the evolution of the 6-4 chord. He directed the music department at the University of North Carolina from 1934 until his death, and served as guest professor and lecturer at other universities, including Michigan (1947) and Harvard (1956), and at the Library of Congress.

Haydon had a keen interest in professional matters: he served as president of both the Music Teachers National Association (1940–42), and the AMS (1942–4), and wrote an important textbook, *Introduction to Musicology* (1941). He also published editions of Renaissance polyphonic hymns, and at the time of his death he was working on a history of the genre. His own compositions include an *a cappella* mass, and music for the ballet and the theatre.

RAMONA H. MATTHEWS

**Hayes.** English family of musicians.

**(1) William Hayes (i)** (*b* Gloucester, bap. 26 Jan 1708; *d* Oxford, 27 July 1777). Composer, organist and singer. He showed an early talent for music and in 1717 became a chorister of Gloucester Cathedral under William Hine, to whom he was later articled. In 1729 he was appointed organist of St Mary's, Shrewsbury, and in 1731 he obtained the post of organist of Worcester Cathedral. Three years later he succeeded Thomas Hecht as organist and *informator choristarum* of Magdalen College, Oxford. On 8 July 1735 he received the BMus, for which he wrote the ode *When the fair consort*, and he was

unanimously elected to the professorship of music on 14 January 1741, after the death of Richard Goodson, whom he also succeeded as organist of the university church. Burney considered him to have been 'a very good organ player' and a 'studious and active professor'. A notable event of his tenure of the professorship was the opening of the Holywell Music Room in 1748, in which weekly concerts were presented under Hayes's direction. He received the DMus on 14 April 1749 during the celebrations marking the opening of the Radcliffe Library, which included the first known performance in Oxford of Handel's *Messiah*. Hayes was an ardent Handelian, and was one of the most active conductors of the composer's oratorios and other large-scale works outside London. He was musical director of the meetings of the Gloucester Music Meeting in 1757, 1760 and 1763, and often combined the roles of conductor and tenor soloist. He was one of the first enrolled members of the Fund for the Support of Decay'd Musicians (later the Royal Society of Musicians), and advanced plans for a scheme, funded by the Society, to establish a co-educational music academy for the training of gifted young musicians for a period of 14 years from the age of seven or eight. In 1765 he was elected a 'priviledged member' of the Noblemen's and Gentlemen's Catch Club, having already won several of the prize medals offered by the club. Of his children, three sons and three daughters survived infancy. His wife, Anne, died on 14 January 1786. A portrait by John Cornish is in the Oxford University Faculty of Music (see illustration).

Hayes's musical style is much indebted to Handel, especially in his large-scale works. Nevertheless, his vocal music shows a typically English preference for non-da capo aria forms, and his contemporary reputation as a composer was founded on genres largely ignored by Handel: English cantatas, organ-accompanied anthems, and convivial vocal music. A firm command of both harmonic and contrapuntal writing characterizes all his music, which is never less than technically assured. A self-consciously learned strand in his music can be observed in his assiduous cultivation of the full anthem, his many ingenious canons, and the strict fugal movements of his concertos and trio sonatas. Although he chose to publish little of his instrumental music, it is generally of high quality. Several of his trio sonatas seem to have been designed for orchestral performance and mix movements in a late Baroque style with others which show a clear awareness of *galant* idioms (including small-scale sonata forms). The early G major harpsichord concerto is remarkable for the detailed written-out ornamentation and cadenzas of its slow movement, and his concerti grossi depart from usual English practice in their addition of a viola to the usual concertino trio of two violins and cello. His odes, oratorios and masques demonstrate a sure command of large-scale resources, and the ode *The Passions*, the one-act oratorio *The Fall of Jericho*, and the *Six Cantatas* confirm that Hayes deserves to be regarded highly among English composers of the 18th century.

*William Hayes (i): portrait by John Cornish, c1750 (Faculty of Music, Oxford)*

His contemporaries testified to his genial nature, but his literary works all demonstrate a contentious side to his character. In his principal work, *Remarks on Mr. Avison's Essay on Musical Expression*, he attacked Avison for presuming to judge the music of others while his own compositions displayed so many faults. He was particularly critical of what he regarded as Avison's excessive praise of Rameau, Benedetto Marcello and Geminiani at the expense of Handel and Corelli, though he agreed with Avison's strictures on works of superficial melodic content and lack of firm harmonic structure. *The Art of Composing* includes the first published description of aleatory composition (albeit satirical), and the *Anecdotes*, although intended to defend the author's reputation, offers important first-hand information about the organization of provincial music festivals.

SACRED

The Fall of Jericho (orat), *c*1740–50
16 Psalms Selected from the Rev. Mr. Merrick's New Version (London, 1773)
David (orat) Act 1, *c*1774–7; completed by P. Hayes
Holy Communion and Evening Service, E♭ [completion of H. Hall and W. Hine's service]
Te Deum, D
Old Hundredth Psalm (London, ?1790)
*c*20 anthems, most in Cathedral Music in Score, ed. P. Hayes (Oxford, 1795)

SECULAR ODES

When the fair consort, 1735, in Vocal and Instrumental Music, iii (Oxford, 1742)
The Passions (W. Collins), 1750 (Oxford, *c*1800)
Where shall the Muse, 1751
Hark! Hark from every tongue, installation ode, 1759
O that some pensive Muse (Ode to the Memory of Mr. Handel), *c*1759
Ode Sacred to Masonry, in Social Harmony, ed. T. Hale (London, 1763)
Daughters of Beauty (commemoration ode, B. Wheeler), 1773

OTHER SECULAR VOCAL

12 Arietts or Ballads and 2 Cantatas (Oxford, 1735)
Circe, masque, in Vocal and Instrumental Music, i (Oxford, 1742)
6 Cantatas (London, 1748)
Peleus and Thetis (masque, G. Granville), ?1749
Catches, Glees and Canons, i–iv (London, 1757–85)

Separate songs, cants. in Vocal and Instrumental Music, ii (Oxford, 1742); see also RISM and *GB-Ob*

INSTRUMENTAL

Concs.: D, 2 fl, str; g, str (arr. of Carbonelli Sonata 10 of 1729); The Rival Nations, 2 fl, 2 'Fifa', timp, str; bn, lost; hpd, G, *c*1735–40; org, A; org, D, 1755

6 concerti grossi, str (B♭, D, g, d, D, B♭); 6 trio sonatas (F, B♭, D, F, B♭, e), *Ob*

WRITINGS

*The Art of Composing Music by a Method Entirely New* (London, 1751) [anon. attack on Barnabas Gunn]

**(2) Philip Hayes** (*b* Oxford, bap. 17 April 1738; *d* London, 19 March 1797). Composer, organist and singer, second son of (1) William Hayes. He received his musical education under his father. He matriculated at Magdalen College, Oxford, and received the degree of BMus on 18 May 1763. He was appointed a Gentleman of the Chapel Royal on 30 November 1767, and lived mainly in London until 1776 when he succeeded Richard Church as organist of New College, Oxford. On the death of his father in 1777 he was appointed professor of music and organist of Magdalen College and the university church, and received the DMus on 6 November. To these numerous posts he added that of organist of St John's College on the death of Thomas Norris in 1790, all of which, including the Chapel Royal post, he retained until his death. Soon after his appointment to the music professorship he began the practice of delivering 'lectures' which took the form of specially composed odes or oratorios performed in the Music School. He was responsible for the renovation of the Music School in 1780, to which he donated a collection of musicians' portraits. In 1791 he presided over Haydn's visit to Oxford to receive an honorary DMus. As a conductor Hayes was active in Oxford and London where he directed the annual Festival of the Sons of the Clergy after the death of William Boyce and concerts of the charitable New Musical Fund. He appears to have been one of the first English musicians to use a roll of paper with which to beat time. His irascibility and corpulence excited much mirth among his contemporaries who nicknamed him 'Fill Chaise' (on account of his reputed capacity to fill a post chaise) and in 1790 he was caricatured by Philippe Jacques de Loutherbourg (copy in Gloucester Public Library, reference section, no.15019).

As a composer Hayes's natural language was a mixture of *galant* and early classical idioms allied with a characteristically English preference for simple, symmetrically phrased melodies and an assured technique founded upon a thorough acquaintance with the works of Handel. His six keyboard concertos (1769) were the first published in England to offer the option of performance on the fortepiano, and beginning with the masque *Telemachus* (1763) his large-scale works often included parts for clarinets.

He was greatly interested in the works of earlier composers, particularly those of Purcell and his contemporaries. Annotations in his hand are frequently found in 17th- and 18th-century English manuscripts, for he was often consulted for his expert knowledge in this field. He was a careful and accurate copyist and a reliable editor. The published sale catalogue of his music library (partly inherited from his father) reveals a wide-ranging collection covering vocal and instrumental music dating back to the 16th century. Many of the manuscripts of his own compositions, together with those of his father, passed to the Bodleian Library in 1801.

WORKS

SACRED

Orats: Prophecy, 1778–9, *GB-Ob*; David, begun by W. Hayes (Acts 2 and 3, 1778–81), *Ob*; The Judgement of Hermes, 1783, *US-Wc*

Service in F (TeD, Jub, San, Cr, CanD, DeM), 1769–70, *GB-Cfm*

Burial Service, E♭, 1772, *Cfm*

O praise the Lord, for the Sons of the Clergy, 1782, 6/4vv, 2 ob, 2 tr, timp, str, *Lbl*

16 Psalms Selected from Merrick's Version (Oxford, 1788)

Te Deum and Jubilate, 1793, 5/8vv, 2 fl, 2 ob, 2 bn, 2 tpt, timp, trbn, str, *Ob*

18 psalms in Improved Psalmody, ed. W. Tattersall (Oxford, 1794)

8 Anthems (Oxford, 1803)

*c*40 anthems, *Cfm*, *Ob*

Responses, miscellaneous canticles, *Ob*

SECULAR VOCAL

Telemachus, masque (Act 1 for BMus, 1763; Act 2, 1763–6), *Ob*

The Muses Delight: Catches, Glees, Canzonets and Canons (London, 1786)

Catches and Glees: The Muses Tribute to Beauty (London, 1789)

16 odes: incl. Ode to the Haymakers (C. Smart), 1763; Ode for St Cecilia's Day (J. Oldham), 1779; The Song of Deborah (W. Hawkins), 1782; Ode to General Elliott (1784), *Ob*

Over 30 single songs, see RISM; also *Ob*

INSTRUMENTAL

6 Concertos, org/hpd/pf, with a hpd sonata (London, 1769)

6 Sonatas, hpd/pf, vn acc., op.2 (London, 1774)

Lady Elizabeth Spencer's Minuet, 2 fl/ob, 2 hn, str (Oxford, *c*1788)

EDITIONS

Harmonia Wiccamica (London, 1780)

W. Boyce: 15 Anthems together with a Te Deum and Jubilate (London, 1780)

W. Hayes: Catches, Glees and Canons, iv (London, 1785)

W. Boyce: A Collection of Anthems and a Short Service (London, 1790)

W. Hayes: Cathedral Music in Score (Oxford, 1795)

WRITINGS

*Memoirs of Prince William, Duke of Gloucester* (London, 1789)

**(3) William Hayes (ii)** (*b* Oxford, bap. 6 Dec 1741; *d* London, 22 Oct 1790). Singer, composer and priest, third surviving son of (1) William Hayes (i). He was a chorister at Magdalen College, Oxford, from 1749 to 1751, and graduated from Magdalen Hall in 1761. The following year he joined the choir of New College, Oxford, and was elected 'Chaunter' (succentor) in 1764. He sang at a number of music festivals organized by his father, and in 1765 entered the church as a singer when he was appointed a minor canon at Worcester Cathedral; in May 1765 he published an article in the *Gentleman's Magazine* entitled 'Rules to be observed by all Cathedral-Singers in this Kingdom'. In 1766 he was elected a minor canon of St Paul's Cathedral, where he wrote several chants, and ten years later was sworn in as a priest at the Chapel Royal. He was vicar of Tillingham, Essex.

PETER WARD JONES, SIMON HEIGHES

**Hayes, Catherine** (*b* Limerick, 25 Oct 1825; *d* London, 11 Aug 1861). Irish opera singer. Through a public subscription and the generosity of friends she was able to study in Dublin with Antonio Sapio. She appeared at Dublin concerts and was then sent to Paris for lessons with Manuel García. After a visit to Italy she made her début at Marseilles (10 May 1845) as Elvira in Bellini's *I puritani*. Her performance in Donizetti's *Linda di Chamounix* at La Scala established her supremacy as an interpreter of Italian opera, and she appeared in works by Ricci, Mercadante, Rossini and Verdi in Venice, Vienna and London (1849). She sang at the Philharmonic Society and Sacred Harmonic Society concerts, and undertook a tour of America, Australia and India, followed by an unusually successful opera season in Ireland (1857). She is said to have been 'a true soprano, with more than an average share of the middle voice, which enabled her to sing music beyond the means of ordinary sopranos' (*Musical World*, 17 August 1861).

GEORGE GROVE/E.D. MACKERNESS

**Hayes, Isaac** (*b* Covington, TN, 20 Aug 1942). American soul singer, keyboard player, songwriter and producer. He first recorded for the Memphis-based Youngstown label in 1962. In the first half of the 1960s Hayes also wrote songs and played sessions for the Goldwax and Phillips labels in Memphis, backing singers such as Jeb Stuart, Dorothy Williams and Spencer Wiggins. As a member of the saxophonist Floyd Newman's band, he eventually found his way into Stax where he co-wrote one side and played on both sides of Newman's solitary single in 1963. Hayes was then hired for a variety of Stax sessions to replace the keyboard player Booker T. Jones while Jones was at college. Soon thereafter Hayes began helping with arrangements and by 1965 had formed a songwriting partnership with lyricist David Porter. Hayes and Porter became the foremost writing and production team at Stax, creating seminal chart hits for artists such as Sam and Dave, the Charmells, Ruby Johnson, Mable John, Carla Thomas, the Soul Children and the Emotions. Their material leaned heavily on gospel roots, some songs, such as Sam and Dave's *Said I Wasn't Gonna Tell Nobody* (1966), being secular rewrites of traditional gospel material.

Although a successful writer, producer and session musician, Hayes desired to resume his career as a recording artist. His first album for the Stax subsidiary Enterprise, *Presenting Isaac Hayes*, was released in the spring of 1968 to little acclaim. However, his second album, *Hot Buttered Soul* (1969), sold over a million copies and in doing so redefined the possibilities for black popular music. Contrary to the beliefs of the major and independent record companies, it demonstrated that black artists could enjoy success with the more prestigious and potentially creative format of the album as opposed to the single. With songs on *Hot Buttered Soul* as long as 18 minutes, Hayes pioneered the use of extended forms in black popular music. He also initiated the vogue in the first half of the 1970s for spoken monologues, or 'raps' as they were then known, and deftly fused aspects of jazz, rock, classical music and soul. With *Shaft* (1971) Hayes pioneered the black film soundtrack, opening the door for such artists as Curtis Mayfield, Marvin Gaye and Bobby Womack to work in that medium.

Alongside Al Green and Stevie Wonder, Isaac Hayes was the dominant black artist in the first half of the 1970s. He continued to record regularly until 1980 and since then has devoted most of his time to acting.

WORKS
(*selective list*)

Film music: Shaft, 1971; Three Tough Guys, 1974; Truck Turner, 1974

Songs: Banana Juice, 1965 [as E. Lee]; Winter Snow, 1967; Precious, Precious, 1968; The Mistletoe and Me, 1970; Do your thing, 1971; Soulsville, 1971; Good Love, 1972 [collab. M. Gregory]; The Come On, 1973; Type Thang, 1973; Joy, 1973; Wonderful, 1974; Chocolate Chip, 1975; Come live with me, 1975; Disco Connection, 1976; Rock me easy baby, 1976; Moonlight Lovin' (Menage à trois), 1978; Out of the Ghetto, 1978; Zeke the Freak, 1978; Ike's Rap, 1986

Other songs (with lyrics by D. Porter): The Sidewalk Surf, 1964 [as Lee, collab. C. Cunningham, M. Thomas]; Boot-leg, 1965 [collab. D. Dunn, P. Axton, A. Jackson]; Candy, 1965 [collab. S. Cropper]; Can't see you when I want to, 1965 [as Lee]; How do you quit (someone you love), 1965 [as Lee, collab. Moore]; In the Twilight Zone, 1965 [collab. Bailey]; I take what I want, 1965 [collab. M. Hodges]; Little Lady of Stone, 1965; Make it me, 1965

When you move you lose, 1965; Willy Nilly, 1965; You don't know like I know, 1965; B–A–B–Y, 1966; Hold on! I'm comin', 1966; I got to love somebody's baby, 1966; I had a dream, 1966; I'll run your hurt away, 1966; Let me be good to you, 1966 [collab. C. Wells]; Little Bluebird, 1966 [collab. B.T. Jones]; Never like this before, 1966 [collab. Jones]; Patch my heart, 1966; Please Uncle Sam (Send back my man), 1966; Said I wasn't gonna tell nobody, 1966

Sister's got a boyfriend, 1966 [collab. Jones]; Toe Hold, 1966; When my love comes down, 1966; You got me hummin', 1966; Your Good Thing (is about to end), 1966; You're taking up another man's place, 1966; As Long as I've Got You, 1967; How can you mistreat the one you love, 1967; If I ever Needed Love (I sure do need it now), 1967; I'll gladly take you back, 1967; I'm a big girl now, 1967; May I Baby, 1967; Same Time, Same Place, 1967; Something Good (is going to happen to you), 1967

Sophisticated Sissy, 1967 [collab. M. Rice, J. Shamwell]; Soul Girl, 1967; Soul Man, 1967; When something is wrong with my baby, 1967; When Tomorrow Comes, 1967; You can't run away from your heart, 1967; A Dime a Dozen, 1968; Give 'em love, 1968; I ain't particular, 1968; I'll understand, 1968; I thank you, 1968; My baby specializes, 1968; Wrap it up, 1968; The Best Part of a Love Affair, 1969; It ain't long enough, 1969; Let 'em down baby, 1969 [collab. H. Banks]

Mellow Way You Treat your Man, 1969; Soul Sister, Brown Sugar, 1969; Stealing Love, 1969; The Sweeter He is, 1969; Tighten up my thang, 1969; When Tomorrow Comes, 1969; Guide me well, 1970 [collab. D. Davis]; Show me how, 1971

ROB BOWMAN

**Hayes, Roland** (*b* Curryville, GA, 3 June 1887; *d* Boston, 31 Dec 1976). American tenor. He received his general education at Fisk University and had several singing teachers, including Arthur J. Hubbard, Sir George Henschel and Victor Beigel. He made concert tours throughout the USA (1916–20) and in 1921 went to Europe, where he gave recitals and appeared with major orchestras in London, Paris, Amsterdam, Berlin and Vienna. An outstanding interpreter of black American spirituals, he was equally successful in the classics and the music of Schubert, Schumann, Brahms, Debussy and Fauré. His sensitive voice and eloquent delivery contributed to an effective performance style. He made a few appearances as late as the 1960s. Hayes was awarded honorary doctorates at Fisk University and Ohio Wesleyan University. He published arrangements of a number of spirituals as *My Sons* (Boston, 1948).

MAX DE SCHAUENSEE/R

**Hayl** [Hail]. German family of organ builders. Daniel Hayl the elder (*fl* 1591–1615) was probably descended from a family resident in Irsee. His organs include those built for Ravensburg (1591); Konstanz Cathedral (1591–2; chancel organ); Langnau, near Friedrichshafen (1592; positiv); Rheinau Abbey (1592–4); Ochsenhausen Abbey (1599–1603); Dreifaltigkeitskirche, Kaufbeuren (1604–5); Landsberg am Lech parish church (1607); the Cistercian monastery at Stams (1610–12); Reichenhofen (1612); St Stephan, Lindau (1612–13); and Andechs Abbey (1615). Hayl's careful improvement of the Schentzer organ in Konstanz Cathedral (1591–2) won the highest appreciation of the examiner Johann Conrad Holtzhei. The specification of the Lindau organ bears a strong resemblance to the style of JÖRG EBERT.

Three sons are known. Hans Diepold Hayl (married in 1621 at Irsee), described as *organicus* or *organifex*, was apparently merely a co-worker. Daniel Hayl the younger (*fl* 1618–38) built an imposing organ for the Benedictine abbey of St Peter at Salzburg (1618–20). He is traceable in further work in Salzburg until 1638. Simon Hayl (*fl* 1618–42), resident at Polling and much sought after, built organs for Bozen (Bolzano) parish church (1618); the Augustinian canons at Polling (1621–8; four organs); Wessobrunn Abbey (1624; great organ, 24 stops; positive, eight stops); and the parish churches of Prien (1634) and Lana, near Merano (1635–7). A repair to the organ in St Mang, Füssen (1642) is Simon Hayl's last known work.

HANS KLOTZ/ALFRED REICHLING

**Hayland, Petrus.** *See* HAILLAND, PETRUS.

**Haym, Nicola Francesco** (*b* Rome, 6 July 1678; *d* London, 31 July 1729). Italian composer, librettist and theatre manager. According to his obituary in *The Weekly Medley* (9 August 1729), he was 'deservedly famous for divinely touching the *Violoncello*', manifested 'Genius for Musick as a Composer, . . . devoted several Hours daily to the *Belles-Lettres*', and 'was Secretary for many Years to the Royal Academy of Musick in this City, in which Employment he distinguish'd himself by his indefatigable Industry and the general Satisfaction he gave to all the Directors'. His 'uncommon Modesty, Candour, Affability and all the amiable Virtues of Life' undoubtedly contributed much to his success in collaborative endeavours.

From 1694 to 1700 he was occasionally employed as a cellist by Cardinal Pietro Ottoboni in Rome. He may also have played in the orchestra at the Teatro Capranica, which staged the first two operas he was to adapt for London: Alessandro Scarlatti's *Pirro e Demetrio* (1694) and Giovanni Bononcini's *La rinovata Camilla* (1698). He was a member of the musicians' Congregazione di S Cecilia by 13 September 1695. Ottoboni commissioned his only two oratorios, which are among his earliest known works, and perhaps helped Giovanni Antonio and Nicola Haym obtain teaching posts at the Seminario Romano by 1695 and 1697 respectively. Giovanni Antonio (*fl* 1680–1729) played the cello, double bass, lute, archlute and trombone, and was perhaps the brother of Sebastiano, a German who was conjecturally the father of Nicola and certainly the father of Pietro Antonio Haym (*d* 13 December 1766). Pietro Antonio played the violin and trombone and was the father of a second Sebastian (1713–88), who played the organ, harpsichord and trombone. Except for Nicola, the Hayms remained in Rome, where they performed and taught, but apparently composed very little.

In 1701 Nicola Haym arrived in London with the Roman violinist Nicola Cosimi. Cosimi had been invited there by Wriothesley Russell, 2nd Duke of Bedford, who visited Rome in 1698–9; it was Cosimi who chose to bring a continuo cellist as his companion. Haym became the duke's master of chamber music, and he established his musical reputation with two sets of Corellian trio sonatas (Amsterdam, 1703–4) and a set of seven cantatas (1704), from which only *Lontan dall'idol mio* is known to survive. When Italianate operas were introduced in 1705 at Drury Lane and the Queen's Theatre, Haym served as the continuo cellist and manager for his wife, the singer Joanna Maria (*d* 1724), Baroness Linchenham (sometimes wrongly spelt Lindelheim). He then made two astonishingly successful adaptations, *Camilla* (1706) and *Pyrrhus and Demetrius* (1708). They are the only works lauded in 'A Critical Discourse on Opera's and Musick in England' (1709), and they show how rapidly Haym adjusted to changing conditions. He was able to retain Bononcini's overture and arias for *Camilla*; but singers undoubtedly demanded many revisions in *Pyrrhus and*

*Demetrius*, so he retained only 14 of Alessandro Scarlatti's arias, composed an overture and 21 arias himself and, chiefly for the two castratos, inserted 19 from other sources, which were mainly 'suitcase arias' (carried around by travelling performers, who demanded the insertion of such pieces in various operas).

During his second decade in London, when operas began to be performed entirely in Italian (rather than wholly or partly in English), Haym probably adapted both text and music for many of the pasticcios that featured suitcase arias. He certainly reworked *Etearco*, *Dorinda*, *Creso* and *Lucio Vero*, and perhaps at least four more whose adapter is unknown: *Almahide* (1710), *Ernelinda* (1713), *Arminio* (1714) and *Vincislao* (1717). No source attributes the music of an aria in any of these works to Haym, whose adaptive hand in fact began to turn to texts during this decade: he supplied Handel with *Teseo* (1713) and perhaps *Amadigi* (1715) and *Radamisto* (1720). He may also have provided Ariosti with *Tito Manlio* (1717), which, unlike all the other texts that Haym prepared for the London stage, has no known predecessor, and thus may be a new creation. Clayton, Dieupart and Haym organized a series of concerts at York Buildings in spring 1712, for which Haym may have written the cantata *Ye tender Pow'rs*. In 1713–17 he and other performers (including his wife) gave a public concert each year for his wife's benefit. His chief patrons during these years were Charles Montagu, Baron Halifax, and James Brydges, Earl of Carnarvon (from 1719 Duke of Chandos). For the latter he composed in 1716 a set of six chamber anthems designed especially for the earl's nine musicians: two boy sopranos, a bass, two violinists, an oboist, a flautist, a cellist (Haym) and a keyboard player. After writing these 'brisk and lively' works, Haym composed no further large-scale musical works; his attention was henceforth focussed on his scholarly activities. The first result was *Il tesoro britannico* (1719–20), in which he drew and described hundreds of ancient medals belonging to 18 British collectors.

Haym is listed as one of two continuo cellists in the plans (drawn up about 15 February 1720) for the orchestra of the Royal Academy of Music. He had been brought to London as a continuo cellist, and this might have remained his chief post if he had not been appointed Secretary of the Royal Academy of Music for its last six seasons, from autumn 1722 to spring 1728. As Secretary he presumably had no time to play in the orchestra, since he had to serve as stage manager for all 24 productions, and as adapter of texts for Handel (*Ottone*, *Flavio*, *Giulio Cesare in Egitto*, *Tamerlano*, *Rodelinda*, *Siroe*, *Tolomeo* and perhaps the pasticcio *Elpidia*), Ariosti (*Caio Marzio Coriolano*, *Vespasiano*, *Artaserse* and perhaps *Aquilio consolo*, *Dario*, *Elisa*, *Lucio Vero* and *Teuzzone*) and Bononcini (*Calfurnia* and *Astianatte*).

Haym's adaptations reflect the shrewdly practical approach to his task that the Modenese diplomat Giuseppe Riva described in letters written to Lodovico Antonio Muratori in 1725–6. After claiming that Haym (in comparison to Rolli) was a perfect idiot in the realm of *belles-lettres*, Riva explained how a libretto for London had to be formulaically written for the singers in the company and how any libretto from Italy had to be 'reformed, or rather deformed, in order to encounter favour: they must have few lines of recitative and many arias, and this is why some of the best operas of Apostolo [Zeno] will never be done and why the two most beautiful by Metastasio, *Didone* and *Siroe*, will suffer the same fate'. Paolo Antonio Rolli, who was Secretary of the Royal Academy in 1720–22, had been a fellow student with Metastasio in Rome. In comparison with Haym, he strove to maintain some poetic artifice in his adaptations, which he disparagingly termed 'dramatic skeletons'. Poetic artifice is best displayed in long recitatives, which were of little or no interest to the English, who came to hear dazzling singers and stirring arias, ariosos and accompanied recitatives. As a result, Haym's 'skeletons' advance the plot rapidly and focus on melodramatic incidents. They thus pleased his audiences, singers and composers (with the possible exception of Bononcini), and remain stageworthy today.

When he died, Haym was helping Handel and Heidegger plan a new academy of music, and it is possible that he had already done some editing of three texts (*Partenope*, *Ormisda* and *Venceslao*) that were produced in 1730–31. If we include these three, the number of operatic texts that Haym might have adapted in London is 35, but only 19 of them are certainly his. In 1724 he was elected a member of the Society of Antiquaries, and in 1726–7 he served as Secretary of the new Academy of [Ancient] Vocal Music, for which he might have composed his anthem of 1728. In the 1720s his scholarship resulted in his edition of works by Maffei and Recanati: *Due tragedie: la Merope e la Demodice* (1721), his edition of *La Gierusalemme liberata di Torquato Tasso* (1724) and his annotated *Notizia de' libri rari nella lingua italiana* (1726). These projects were based in part on the magnificent collections of books, prints, coins and paintings listed in his own sale catalogue (1730). Just before his death he had finished *A General History of Musick*, which John Lockman was translating into English. According to the description and table of contents printed in *The Flying Post, or Weekly Medley* (29 March and 12 April 1729) and reprinted in Hawkins, books 3–6 of Haym's second volume dealt with the origin, subsequent spread and English reception in 1700–28 of Italian opera. If these books are ever found, they should provide us with many insights into Baroque opera.

WORKS

OPERAS

*only the London works for which Haym is known to have adapted music as well as text are listed*

Camilla [G. Bononcini: Il trionfo di Camilla], Drury Lane, 30 March 1706, condensed score *GB-Lcm* (facs. in MLE, E/i, 1990); ov. and 52 arias (London, 1706)

Pyrrhus and Demetrius [A. Scarlatti: Pirro e Demetrio], Queen's, 14 Dec 1708, ov. and 54 arias (London, 1709)

Etearco [G. Bononcini: Etearco], Queen's, 10 Jan 1711, ov. and 36 arias (London, 1711)

Dorinda [C.F. Pollarolo: Le fede riconosciuta], Queen's, 10 Dec 1712

Creso, re di Lidia [G. Polani: Creso tolto a le fiamme], Queen's, 27 Jan 1714, ov. and 24 arias (London, 1714)

Lucio Vero, imperatore di Roma [T. Albinoni: Lucio Vero], King's, 26 Feb 1715

OTHER SECULAR VOCAL

*for details of lost works see Lindgren (1987)*

Il reciproc'amore di Tirsi e Cloria, serenata, S, A, str, bc, Rome, 1699, *GB-Lbl*

Italian cantatas: Alma non ho di pietra, lost; Aprimi il petto amore, A, bc, 1712, *B-Bc*; Belle spiagge latine, 1v, bc, *E-Mn*; È qual invido velo, S, 2 fl, bc, *US-IDt*; Lontan dall'idol mio, S, 2 vn, bc, 1704, *GB-Lbl*; Mentre in tacito orrore, 1v, bc, *E-Mn*; Se sto lungi, lost; Se tiranno il bendato bambin, S, S, bc, *GB-Lbl*

English cantatas: Ode of Discord, B, 2 vn, bc, 1706, lost; Ye tender pow'rs how shall I move? (J. Hughes), ?*c*1712, lost

SACRED

David sponsae restitutus (oratorio, F. Posterla), Rome, SS Crocifisso, 13 March 1699, *GB-Ckc*

I due luminari del Tebro [S Costanza] (oratorio, A. Spagna), Rome, ? Palazzo della Cancelleria, 1700, *Ckc*

Servizio per la settimana santa, ?*c*1700, lost, listed in Haym's sale catalogue (1730)

Ad arma mortales, motet, 2vv, 1700, *Lbl*

6 anthems for Cannons, 29 Sept 1716: O Lord our governour, S, 2 vn, va, bc, *Lbl*; The earth is the Lord's, S, 2 vn, va, bc, *Lbl*; The Lord is King, S, ob, solo vn, 2 vn, bc, *Cfm**, *Lbl*; O praise the Lord in his holiness, S, S, ob, fl, solo vn, solo vc, 2 vn, bc, *Lbl*, *Ob** (attrib. W. Croft); Have mercy upon me, O God, S, 2 vn, bc, *Lbl*, *Ob** (attrib. J.E. Galliard); O sing unto the Lord a new song, S, S, B, fl, solo vn, solo vle, 2 vn, bc, *Lbl*

Lord give thy judgments, anthem, SATB, insts, 1728, *Ob**

INSTRUMENTAL

12 sonate a tre, 2 vn, bc, op.1 (Amsterdam, 1703)

[12] sonate a tre, 2 vn/fl/vc, bc, op.2 (Amsterdam, 1704)

New sonata, 2 fl, in Choice Italian and English Music for Two Flutes (London, 1709)

4 sonatas in VI sonate da camera, fl/ob/vn (Amsterdam, 1710)

LOWELL LINDGREN

**Hayman, Richard (Warren)** (*b* Cambridge, MA, 27 March 1920). American conductor, arranger, harmonica player and composer. He began his professional career in 1938 as a performer and arranger with the Borrah Minevitch Harmonica Rascals. His arrangements for this ensemble brought him to the attention of commercial musicians, and within a few years he was working as an orchestrator for Metro-Goldwyn-Mayer studios on musical films that included *Girl Crazy*, *Meet me in St. Louis*, and *As Thousands Cheer*. After returning to Boston, where he was music director of the Vaughn Monroe Orchestra in the late 1940s, Hayman was named principal arranger for the Boston Pops Orchestra in 1950. In the decades that followed he served as music director for numerous leading entertainers, including Bob Hope, Johnny Cash, Red Skelton, Johnny Carson, Andy Williams, Pat Boone, Olivia Newton-John, and Bobby Vinton. His tune *Ruby* (from the soundtrack for the film *Ruby Gentry* (1953), featuring Hayman's own solo harmonica playing) was a best-selling recording, as was his disco arrangement of themes from Beethoven's Fifth Symphony (*A Fifth of Beethoven*) in the late 1970s. Hayman expanded his activities in the early 1970s to include appearances as guest conductor for 'pops' concerts presented by symphony orchestras, eventually obtaining the title of 'principal pops conductor' with the orchestras in Detroit and St Louis. (His conducting abilities in standard classical repertory are limited.) Something of a showman, Hayman has a flamboyant style on the podium which is augmented by his extravagant costumes and quick-witted banter.

JAMES WIERZBICKI

**Haymo** [Ammonius] **of Faversham** (*b* Faversham, Kent, *c*1175; *d* Anagni, summer 1244). English friar, administrator and liturgist. He was said to have been educated in the arts in England before studying theology at the University of Paris, where on 12 April 1224 he joined the young Franciscan Order. He was active in the affairs of the order and travelled widely in its service, and seems to have played a part in the establishment in 1229 of the Franciscan school in Oxford that formed the nucleus of the new university there. He was elected minister provincial of England in 1239 and minister general of the Franciscan Order on 1 November 1240. As general he did much to strengthen the institutions of the order. But his importance for the history of music lies in his reform of the Franciscan liturgy. He first (probably in 1243) produced an ordinal prescribing the words and actions of

private and simple conventual Masses, known from its opening words as *Indutus planeta*. He then undertook a more comprehensive ordinal in three parts: for the Office, for grace before and after meals, and for the Mass. This entailed a new arrangement and style of rubrics as well as codifying the evolution of Franciscan usage over the previous two decades. The Franciscan liturgy had been based on the practice of the papal court; Haymo regularized, clarified and simplified the rubrics exhaustively for the whole of the divine service as practised by Franciscans. In its turn the Franciscan use was taken as a foundation for the re-establishment of the papal liturgy in the third quarter of the 15th century, following the Great Schism, and this was the basis of the reformed liturgy of the Council of Trent in the 16th century. Haymo's ordinal thus stands in the background of the Roman liturgy generally up until the Second Vatican Council in the 1960s.

□

**Hayn, Gabriel** (*fl* mid-16th century). German printer, son-in-law of JOHANN PETREIUS.

**Hayne** [Heyne], **Gilles** [Hennio, Aegidio; Ennio, Aegidio; Hennius, Aegidius] (*b* Liège, bap. 29 July 1590; *d* Liège, 28 May 1650). Flemish composer. From 1604 to 1607 he was a senior *duodenus* at Liège Cathedral; he received an award, which he kept until 1614, that enabled him to continue his studies with the Jesuits. He is known to have been in Rome in 1613. It must have been about 1618 that he became director of music to Ferdinand of Bavaria, Prince-Bishop of Liège. He is referred to as such in various documents dated between 1621 and 1635 and on the title-pages of his publications of 1640, 1643 and 1646. However, on 3 January 1627 (according to Henri Hamal, quoted by Philippe), he was appointed a canon of St Jean l'Evangéliste, Liège, and since he was obliged to take up residence there, his position with the prince-bishop became purely nominal. He also became *grand chantre* of St Jean on 15 March 1631. About July 1631 he met the prince-bishop's brother-in-law, Wolfgang Wilhelm, Duke of Neuburg and Count Palatine of the Rhine, who on 12 April 1638 engaged him as superintendent of his music on condition that he compose for his chapel and on occasion send him well-trained singers for it. There is an interesting correspondence in Italian between the two men covering the period 1644–50; Biagio Marini, who had served the duke as Kapellmeister at Düsseldorf, figures in it.

Hayne composed principally sacred music similar in style to that of the Roman school of the early 17th century, which Ferdinand of Bavaria must have favoured. He wrote several works for six or more voices, and he sometimes included parts for instruments other than the continuo, which are now lost. He wrote very well for the voice: his melodic lines are supple; they closely follow the accentuation of the Latin text and are sometimes enlivened by discreet madrigalisms. He was in general a conservative composer, only cautiously open to new musical ideas, whereas his contemporaries Andreas d'Ath and Leonard de Hodemont were clearly influenced by more up-to-date Italian music.

WORKS

Moteta sacra, liber primus, 2–4vv, insts, bc (Antwerp, 1640), inst pts missing

Motetti overo madrigali ... fatti spirituali da un devoto padre della Compania di Gesù e dedicate alla gioventù Liegese amatrice della musica, 5vv, bc, op.2 (Antwerp, 1643), madrigalian texts lost

JOSÉ QUITIN/PHILIPPE VENDRIX

**Haynes, Bruce** (*b* Louisville, KY, 14 April 1942). American and Canadian oboist, recorder player and musicologist. He studied the oboe with Raymond Dusté (1958–61) and John de Lancie (1960), and joined the San Francisco Ballet and Opera orchestras in 1960. From 1964 to 1967 he studied early music performance in the Netherlands, where his teachers included Frans Brüggen (recorder) and Gustav Leonhardt (ensemble performance and interpretation). In 1966 he began to play the early oboe. He was one of the first 20th-century performers to master the instrument and a key figure in setting professional performance standards for it. From 1972 to 1983 he taught the recorder and the early oboe at the Royal Conservatory in The Hague. During this period he pursued an active performing career and made a number of recordings. In 1979 he was a founding member of the Philharmonia Baroque Orchestra, and during the 1980s he performed with many period instrument ensembles. In 1984 he was appointed to teach the early oboe at the University of Montreal. Haynes's interest in the instrument and its performing practices led to much scholarly investigation; his research has encompassed the construction, repertory and playing techniques of the instrument. This aspect of his career had become dominant by the late 1980s and, while concentrating on the early oboe, he has also produced important studies on the history of pitch.

JANET K. PAGE

**Haynes, William S(herman)** (*b* East Providence, RI, 27 July 1864; *d* Winter Park, FL, 28 Jan 1939). American flute maker. Haynes was trained as a silversmith in the Gorham factory in Providence. By 1888 he had completed his first flute, and for the next six years was in business with his brother, George W. Haynes. From 1894 to 1900 he was superintendent of John C. Haynes & Co., Boston. In 1900 he started his own company at 180–86 Washington Street, Boston.

Haynes originally made Boehm flutes in wood, but in 1913 finished his first silver instrument; he made very few wooden flutes after 1918. At this time he experimented with aluminium tubes and was awarded several US patents (including one in 1914) for a method of drawing integral tone holes from the flute tube.

In 1914 Haynes made his first gold flute and in 1935 the first platinum flute in the USA (for Georges Barrère). He also made piccolos, alto flutes, and double-walled silver clarinets (built on the Thermos model), for which he received a US patent (1926). The company maintained a New York sales office from 1923 to 1978. Haynes retired in 1936, but the company continued in the ownership of the Haynes family until 1976, when it was sold to longstanding employee Lewis Deveau, who subsequently made modifications in the Haynes scale. Following the deaths of Deveau and his wife, the company was sold to the foreman, John Fuggetta. The firm, Wm. S. Haynes Co., was still at 12 Piedmont Street, Boston, at the end of the 20th century.

Haynes and his foreman VERNE Q. POWELL were the most influential flute makers in the USA in the first half of the 20th century, and were responsible for introducing the manufacture of French-style silver flutes to the USA. Haynes also trained many important flute makers, including Arthur Gemeinhardt, and achieved an international reputation.

FRIEDRICH VON HUENE/NANCY TOFF

**Hayne** [Ayne, Haine, Heyne, Scoen Hayne] **van Ghizeghem** [Ghiseghem] (*b c*1445; *d* 1476–97). Franco-Flemish composer. Hayne, or his family, may have come from the village of Gijzegem, about 20 km from Ghent; he was perhaps related to Henricus de Ghizeghem, a singer at Cambrai Cathedral in 1453. Hayne was still a young boy in 1457 when Charles, Count of Charolais (later Charles the Bold), placed him in the care of Constans Breuwe, a singer in the employ of Charles's father, Philip the Good, and possibly Hayne's first teacher. Hayne is listed as a singer and chamber valet in Charles's account book for January–December 1467. Hayne seems always to have served in a secular capacity, never becoming a member of the ducal chapel. The following year he received a special payment to equip himself for military service, presumably in preparation for Charles's campaign against Liège. Hayne was no doubt with him in October when the duke stopped at Cambrai on his way to battle; this may have been the occasion of the performance there by Hayne and his colleague Robert Morton referred to in the anonymous rondeau *La plus grant chiere de jamais* (*F-Dm* 517). On 6 July 1472 Hayne was with Charles at the siege of Beauvais. The latest known record concerning the composer's life, from 9 December 1476, places him with the duke on his final campaign, the siege of Nancy, where Charles's death on 5 January 1477 led to the breakup of the Burgundian territory.

The transmission of Hayne's songs for the most part postdates the extant documentation for his life. Only two of his chansons, *Amours amours* and *De tous biens plaine*, appear in manuscripts written before 1480, while new works – many in a distinctly more advanced style – entered circulation throughout the next two decades. Nearly all of these are in manuscripts from the French royal court; indeed, Hayne's representation in these sources, which show a strong tendency to favour the music of composers in royal service, is equalled only by that of Agricola and Compère. Although no evidence of his presence appears among the scarce documents pertaining to musicians in French-speaking regions at the time, the pattern of transmission of Hayne's music suggests strongly that he survived the siege of Nancy and left Burgundy to pursue his career at the court of France. He was certainly dead, however, by the time Crétin wrote his *déploration* for Ockeghem, who died on 6 February 1497; in this poem Hayne is depicted performing with his lute the motet *Ut heremita solus* (possibly not by Ockeghem) as the culmination of a series of performances of Ockeghem's works by already-deceased musicians welcoming their colleague to the afterworld.

20 chansons are attributed to Hayne in late 15th- and early 16th-century sources. Some of the chansons also appear under other names, and the ascriptions of a few of the pieces found only under Hayne's name do not seem entirely reliable. The most trustworthy ascriptions are probably those in *F-Pn* fr.2245, *GB-Lbl* Roy.20.A.XVI, *I-Fr* 2794 and *US-Wc* M2.1.L25 Case, all of which originated at the French royal court or in closely associated circles; these sources are particularly valuable in resolving conflicts of authorship. Thus the disputed *De vous servir* is almost certainly by Fresneau, as indicated in *I-Fr* 2794, in spite of ascriptions to Hayne in two manuscripts of Italian origin. Conversely, the ascription of *Les grans regretz* to Agricola in the Savoyard manuscript *B-Br* 11239 should be disregarded in favour of that to Hayne in *F-Pn* fr.2245 and *US-Wc* M2.1.L25. In one instance, however, stylistic considerations seem to contradict the authority of one of the principal sources: the bergerette *Se je vous esloigne*, though ascribed to Hayne in *I-Fr* 2794, is written in a form found nowhere else in his extant output and is undoubtedly by Agricola, to whom it is ascribed in the Florentine manuscript *I-Fn* Magl.XIX.178.

The most problematic source is the Ferrarese manuscript *I-Rc* 2856, in which nine pieces are ascribed to Hayne. Four of these are confirmed by other sources, two have conflicting ascriptions to Busnoys that seem more credible on the grounds of both sources and style, and three are anonymous elsewhere. In addition, the manuscript contains Hayne's *Ce n'est pas jeu* under Ockeghem's

name. These errors raise some doubt as to the reliability of the manuscript's unique ascriptions to Hayne.

Two other chansons, *Gentil galans* and *A l'audience*, also lack strong claims to authenticity, since they appear solely in Italian sources, and each is attributed to Hayne only once. *A l'audience* seems particularly uncertain in that it is the only four-voice piece attributed to Hayne, though the contratenor may be a *si placet* part. An extended quotation from *Allez regrets* could indicate Hayne's authorship but more likely argues against it; if the piece is not his, the quotation may be the reason that Petrucci's editor assigned it to him. Conversely, *Elle en est*, found in only one source, without attribution, may well be by Hayne, since it belongs to a group of his works transmitted anonymously in *GB-Lbl* Roy.20.A.XVI and is stylistically compatible with the works known to be his.

Hayne's output, as far as it can be established, consists entirely of rondeaux (including, probably, the two pieces that survive without text). With the possible exception of *A l'audience* all are for three voices, and all are in duple metre. The pieces share the traits typical of their genre in the later 15th century: a treble-dominated texture, probably intended for texted performance of the top voice and solmized or instrumental performance of the lower voices; a contrapuntal structure built around a duet of discantus and tenor with an added contratenor; a break roughly halfway through corresponding to the division in the poetic form; and a prevailing line-for-line agreement of music and refrain text.

Hayne tended to make the most of the clarity inherent in this framework. His phrases are balanced and directed; they generally open in relatively long note-values (seemingly conceived for syllabic text setting), gradually become more melismatic and syncopated, and close almost invariably with a suspension cadence. In approximately two-thirds of the chansons the first and last phrases finish on the same degree of the mode; Hayne seems to have been one of the earliest composers to use this means of achieving tonal unity. The counterpoint of the discantus and tenor is generally smooth, with dissonances for the most part carefully handled; imperfect consonances and conjunct motion predominate. The contratenor, usually moving in 2nds, 4ths and 5ths, lends a quasi-harmonic feeling to the music, but sometimes produces awkward combinations with the other voices. Imitation, most often among all three voices, occurs at the opening of about half the chansons but only occasionally within the body of a piece.

Although the quality of Hayne's music varies somewhat, the best of his chansons, such as *Allez regrets*, *De tous biens plaine*, *La regretée* and *Mon souvenir*, are among the finest works of their genre, distinguished by melodic elegance and restrained expressive intensity. Several of his compositions became very popular: *Allez regrets* and *De tous biens plaine* appear in some 25 sources each and served as the basis for numerous works by other composers (for three sources of the latter, *see* SOURCES, MS, fig.11).

LOUISE LITTERICK

**Hayrapetian, Eduard Grigori** (*b* Yerevan, 5 Sept 1949). Armenian composer. He first studied composition at the Melikian Music College under Akhinian (1966–8) and then under Yeghiazarian at the Yerevan Conservatory (1968–73) where he taught from 1996 to 1999. He joined the Armenian Composers' Union in 1976, has received numerous prizes (including the Khachaturian Prize in 1993) and his works have been widely performed in Russia, the Baltic states, eastern Europe and Sweden. The expressionist language of his music is a product of his interest in the phenomenology of the human personality and the existential cognition of the world. The serial method he used in early works is largely remote from that of the Second Viennese School; it involves the harmonic and melodic variation of pithy motifs whilst maintaining their intervallic structure (the oratorio *'1915'*). At the beginning of the 1980s his language metamorphosed under the influence of late Shostakovich and Lutosławski; the dramatic plan of his works – previously based on a shifting texture – became more stable, and his growing tendency to a modernized Romanticism led to new stylistic elements such as distinguishable tonal zones and

triads, use of diminished chords with chromatic voice leading and a heightened attention to melody.

SVETLANA SARKISYAN

**Hays, Sorrel** [Doris] **(Ernestine)** (*b* Memphis, 6 Aug 1941). American composer, pianist and mixed-media artist. She studied at the University of Tennessee, Chattanooga (BM 1963), the Munich Hochschule für Musik (piano and harpsichord diploma 1966), the University of Wisconsin (MM 1968) and the University of Iowa (composition and electronic music, 1969). After winning first prize in the International Competition for Interpreters of New Music (Rotterdam) in 1971, she toured Europe and the USA numerous times as a performer and advocate of new music. In the 1970s and 80s she gave between 60 and 70 premières of other composers' music, including Cowell's Piano Concerto (1978) and works by Cage, Oliveros and Marga Richter.

She has worked extensively for women composers, producing 'Expressions', a radio series sponsored by the International League of Women Composers, of which she was assistant chairman from 1979 to 1982. She took the name Sorrel in place of Doris in 1985.

Hays's piano writing, in the tradition of Ives and Cowell, juxtaposes fiercely bombastic tone clusters with hymn-like passages of extreme serenity; finger stopping of the strings and microtonal experiments contribute to the great range of sonorities explored. The various chamber works entitled *Tunings* (1978–80), incorporating Appalachian fiddle riffs and a hymn tune, combine fine instrumental writing with rhythmic vitality and lyric beauty. The piano work *Sunday Nights* (1977) was the first of a number of pieces to evoke her Southern background. Her research into the musical aspects of Southern speech resulted in the tape music of *UNI* (1978) and *Southern Voices for Tape* (1980). These speech patterns also became the basis of *Southern Voices for Orchestra* (1981, commissioned for the 50th anniversary of the Chattanooga Symphony), which translates spoken dialects into orchestral and vocal sound. Her involvement in the feminist and peace movements became central to her work as a composer during the 1980s. *Exploitation* (1981), written for the first International Congress on Women in Music, commented wryly on the status of women as performers and composers at that conference and elsewhere.

Hays has written many mixed-media compositions: the radio drama commissions from Radio Cologne in the 1980s enabled her to create substantial works in this genre, produced in studios in Cologne and New York. Her opera *The Glass Woman* (1989–93), an ambitious work commissioned by the National Endowment for the Arts and Opera America, concerns six renowned women collectors, including Bessie Smith and Peggy Guggenheim, commemorated by their own museums; another work dedicated to influential women, among them Ethel Smyth and Ruth Crawford, is *90s: a Calendar Bracelet* (1990), a cycle of pieces for MIDI grand piano. *The Clearing Way* (1992), for contralto and orchestra, is based on Amerindian rituals for the passing of the spirit of the dead and cleansing of the departed's dwelling. Her increasing interest in integrating music with other media is exemplified in *Dream in her Mind* and *Mapping Venus*, which combine text collage and electronic music with operatic lyrical forms.

MYRNA S. NACHMAN, CATHERINE PARSONS SMITH

**Hayton, Lennie** [Leonard] **(George)** (*b* New York, 13 Feb 1908; *d* Los Angeles, 24 April 1971). American musical director, conductor and arranger. He began his career as a pianist, playing and arranging for jazz artists, in particular for the Paul Whiteman Orchestra in the late 1920s. His arrangements of classic songs for Whiteman, such as *Nobody's Sweetheart*, are considered among the finest of their era, blending jazz instruments with those of the traditional orchestra. His later arrangement of *Star Dust* provided a hit in the early 1940s for clarinettist Artie Shaw. In 1940 he became musical director for Metro Goldwyn Mayer studios before moving to Twentieth Century-Fox in 1953. He was involved in arranging scores for a number of films and musicals including *The Harvey Girls* (1945) and *The Pirate* (1948); the arrangements reflect the complexity achieved in his work for Whiteman, although film music had only recently incorporated jazz into its idioms.

Hayton was nominated for Academy Awards for his work on several notable musicals, including *Singin' in the Rain* (1952) and *Hello Dolly!* (1969). He received the Oscar in 1949 for his musical direction, with Roger Edens, of *On the Town*, based on Leonard Bernstein's ballet, *Fancy Free*. His connection with jazz was sustained alongside his film music career through his marriage to jazz vocalist Lena Horne. She credited Hayton with helping her to develop her voice, and he managed her professional singing career. (*SchullerEJ; SchullerSE*)

KATE DAUBNEY

**Haywood** [Cibulsky], **Charles** (*b* Grodno, Belarus, 20 Dec 1904/2 Jan 1905; *d* New York, 12 June 2000). American musicologist and ethnomusicologist of Russian origin. He went to the USA in 1916. He attended the City College of New York (BS 1926) and later obtained diplomas from the New York Institute of Musical Art (1930) and the Juilliard Graduate School of Music (1935). During this period he was active as a singer of opera, lieder and folksong. He completed his graduate education at Columbia University (MA 1940, PhD 1946), where he studied musicology, anthropology and education (1946). He was professor of music at Queens College of the City University of New York (1939–73) and has also been visiting lecturer at several American universities. His *Bibliography of North American Folklore and Folksong*, containing regional, ethnic and occupational listings of ballad, folksong and folk dance studies and collections, continues to be a primary source for contextual material in ethnomusicological research focussing on North American topics. Haywood made extensive studies of music inspired by Shakespeare, and in the early 1980s donated his unpublished bibliography of over 50,000 related entries to the University of Victoria, where it resides as The Charles Haywood Collection. Haywood has been a member of the Society for Ethnomusicology (council member) and the International Folk Music Council (executive board member, editor of the *Yearbook* (1971–3) and president of the American National Committee); he has held a Fulbright Research Professorship in Austria (1961–2, 1967–8).

WILLARD RHODES/ISRAEL J. KATZ

**Hazen.** Spanish firm of piano and harp makers. It is one of the oldest piano manufacturers still operating in Europe, and it has remained under the control of the Hazen family from its foundation until the present day. It was founded by the Dutch carpenter Jan [Juan] Hosseschrueders (*b* Woensdrecht, 1779; *d* Amberes, 1850), who travelled to Spain in about 1802 and opened a piano workshop in Madrid in 1814. During the 1820s Hosseschrueders was established at the Calle Hortaleza 12, and in 1827 he had a workshop at the Calle Luna 11. The earliest known instruments with his trademark are five-octave square pianos. In 1824 he requested a patent for the manufacture of a transposing piano, which won him a silver medal at the Spanish Industry Exhibition of 1827. An undated transposing piano, probably the prize-winning instrument, is now preserved in the Hazen Collection. He was also awarded a gold medal for an upright piano in 1828.

Before 1830 Jan's nephews Juan (1796–1872) and Pedro (1803–51) Hazen Hosseschrueders arrived from the Netherlands to join the factory; the name of the firm was then changed to 'Hosseschrueders y sobrinos'. They began to make harps as well as pianos and won several medals at the Spanish exhibitions of 1831 and 1841. There are no known surviving harps with their trademark, and the only extant pianos are square ones, with English-style mechanisms and mahogany cabinets, generally with a compass of six octaves. Between 1851 and 1872 the firm suffered the effects of the industrial crisis in Madrid and turned to the distribution and hire of pianos, although they continued to sell pianos and player pianos with their trademark until the beginning of the 20th century.

By 1919 the factory had relocated to the Calle Fuencarral 55; it remained there until 1970, before moving to the Carretera de la Coruña, Km. 17,600. Since 1970 the firm has concentrated on the distribution and sale of international brand names. Its director, Juan Hazen García (*b* 1918), created a collection of historic pianos, the Hazen Collection, with instruments from the Hazen factory as well as others of the most important national and international makes. For further information see *Hazen y el piano en España: 175 años* (Madrid, 1989).

CRISTINA BORDAS

**Heaburn, Ferdinando.** *See* RICHARDSON, FERDINAND.

**Head, Michael (Dewar)** (*b* Eastbourne, 28 Jan 1900; *d* Cape Town, 24 Aug 1976). English composer, singer and pianist. He abandoned studies in mechanical engineering and went to the RAM (1919–25), where he studied composition with Corder and in 1927 was appointed professor of piano; he retained this post throughout his career and was later made a Fellow. He was also very active as an examiner and adjudicator (he died on an examining tour).

Head's public reputation, however, was based on his work as a composer and performer. He appeared in one-man recitals as a singularly persuasive interpreter of his own music. In this capacity he toured widely and made frequent broadcasts and several recordings. As a composer Head is known almost exclusively for his vocal music. He began publishing in 1917 and most of his 100 songs have remained in print. Certain of them, *The Little Road to Bethlehem* for example, have proved enormously popular. His music is melodically simple and harmonically conservative, and falls somewhere between the popular ballad and the art song proper. Though his style is not strikingly individual, nor his concerns particularly penetrating, his music has charm and integrity and the solid backing of fastidious craftsmanship.

WORKS
(*selective list*)

SONGS

Over the Rim of the Moon (F. Ledwidge), 1918; 3 Songs of Fantasy (F.D. Sherman), 1920; Songs of the Countryside (W.H. MICHAEL HURD

**Headington, Christopher (John Magenis)** (*b* London, 28 April 1930; *d* Les Houches, Switzerland, 19 March 1996). English composer, writer and teacher. He was educated at Durham University and at the RAM, studying composition privately with Lennox Berkeley. In 1964, after a period of schoolteaching, he became senior assistant in music presentation at the BBC. The following year he was appointed tutor in music at the Oxford University Department for Extramural Studies, a post he relinquished in 1982 in order to devote more time to his creative work. Alongside his composition, he was active as a writer and broadcaster, also travelling widely as a pianist and examiner.

Headington's music is beautifully crafted: its powerfully expressive and warmly lyrical qualities are already evident in the Violin Concerto (1959), whose 1991 recording brought him wide recognition. The chamber music, in particular the String Quartet no.2 and the Piano Quartet, is cogently argued and serious in tone: the finale of the Third String Quartet, composed in celebration of Haydn's 250th anniversary, ingeniously reworks material from the latter's Quartet op.77 no.2. Headington also wrote with assurance for his own instrument: the *Cinquanta* and *Ballade-Image*, both for solo piano, reflect his admiration for Debussy and Chopin, achieving an ideal balance between brilliance and poetry. Equally significant are his vocal works, among them the song-cycle, *The Healing Fountain*, an eloquent memorial tribute to Britten which Headington ranked as his finest achievement.

WORKS
(*selective list*)

Inst: 5 Preludes, pf, 1953; Str Qt no.1, 1953; Sonata no.1, pf, 1955; Vn Conc., 1959; Toccata, pf, 1962; Str Qt no.2, 1972; Sonata no.2, pf, 1974; Pf Qt, 1978; Shrewsbury Variations, vn, pf, 1981; Ballade-Image, pf, 1982; Sinfonietta, chbr orch, 1985; Sonata no.3, pf, 1985; Str Qt no.3, 1985; Cinquanta, pf, 1986; Bn Conc., 1990; Pf Conc., 1991; Serenade, vc, str orch, 1993; Sym., 1996

Vocal: 5 Poems of Robert Herrick, chorus, 1954; Hear My Prayer, O Lord (Ps 102), chorus, 1960; Man's Redemption (carol), SATB, 1966; Put on the Whole Armour of God (Bible: *Ephesians*), SATB, org, 1966; A Clouded Starre (H. Vaughan), low v, pf, 1975; A Bradfield Mass, chorus, congregation, org, 1977; The Healing Fountain (S. Sassoon and other), medium v, orch, 1978; A Wedding Anthem, chorus, 1988

Arrs., incl. P. Tchaikovsky: The Seasons, vn, str, 1993

*Peter Pears: a Biography* (London, 1992)

TERRY BARFOOT

**Head-motif** (Ger. *Kopfmotiv*). A musical idea which by virtue of appearing at the beginning of each of a series of pieces or movements establishes a relationship between them. As a unifying feature of cyclic masses of the 15th to 17th centuries, it can be melodic, harmonic or rhythmic and is often a combination of these; it can be as short as a few notes or several bars long. Another term for it is 'motto', which Bukofzer preferred in his *Studies in Medieval and Renaissance Music* (New York, 1950).

DAVID FALLOWS

**Healey, Derek** (*b* Wargrave, 2 May 1936). British composer and organist. He studied at the RCM (1953–7) with Herbert Howells (composition), Harold Darke (organ) and others, at the University of Durham (BMus 1961) and at the University of Toronto (DMus 1974). Before moving to Canada, he also studied with Vito Frazzi and Goffredo Petrassi at the Accademia Musicale Chigiana, Siena (1961–3). He has held teaching positions at the universities of Victoria, British Columbia (1969–71), Toronto (1971–2), Guelph, Ontario (1972–8), the University of Oregon (1979–87) and the Royal Air Force School of Music, Uxbridge (1988–96).

Healey's early neo-classical style gave way in the 1960s to atonal and aleatory influences. Several works from the 1970s onwards, such as *Arctic Images* (1971), *Gabriola* (1988) and *Salal* (1990), have been influenced by the musical traditions of Pacific Northwest Amerindian and Inuit peoples. His opera, *Seabird Island* (1977), was the first full-length 20th-century opera to embark upon a national Canadian tour. He has also written extensively for the organ.

WORKS
(*selective list*)

Op: Seabird Island (N. Newton), op.46, 1977, Guelph, ON, 7 May 1977

Orch: Conc., op.8, org, str, timp, 1960; Arctic Images, op.40, 1971; A Shape Note Sym., 1975–8; Oregon Fancy, op.52, chbr orch, 1978; Sym. no.2 'Mountain Music', op.66, wind ens, perc, 1985; Gabriola (A West Coast Canadian Set), op.70, 1988; Salal (An Idyll), op.71, 1990; Triptych, op.73, band, 1990

Choral: Descendi, amor santo (Bianco da Siena, trans. R. Littledale), op.28a, S, SATB, org, 1967; Clouds (M. Bashō), op.41a, 1972; 6 Canadian Folk Songs, op.41b, chorus, pf ad lib, 1973; 3 Carols, op.54, 1965, rev. 1977–9; Before the World is Old (A.E. Housman), op.68, chorus, pf ad lib, 1986

Chbr: Stinging, op.38a, a rec, hpd, tape, 1971; Wood, op.51a, S/shackuhachi, 4 synth, 1978; Siuslaw, op.57, perc qnt, 1979, rev. 1981; English Dances, op.69, perc sextet, 1987

Org: Sonata no.1, op.10, 1961; Partita '65, op.25, 1965; The Lost Traveller's Dream, op.35, 1970; Sonata no.2, op.75, 1992; Sonata no.3, op.80, 1996

CLIFFORD FORD

**Heaney, Joe** [Seosamh Ó hÉanaí/hÉiniú] (*b* Carna, Co. Galway, 1920; *d* Seattle, 1 May 1984). Irish traditional singer and story-teller. From a western maritime area noted for *sean-nós* ('old-style' unaccompanied Irish-language) singing, Heaney became a leading and magisterial exponent of this style, with a large repertory of several hundred songs, including many in English, which he learnt mostly from his father, aunt and neighbours. His repertory ranged from religious songs and other items of medieval survival to local love and comic songs and political ballads. After an uncompleted period of study at teacher-training college and successes in singing competitions at Irish-language festivals, he emigrated to Scotland in 1947 and later moved to England where he worked as a labourer. He came to the attention of folk revivalists there and, having returned to Ireland in 1957, was one of the first *sean-nós* singers to record commercially. Heaney emigrated to the USA in the late 1950s where he worked as a doorman in New York and performed at folk festivals and academic workshops. In the 1970s he became a visiting artist at the University of Washington, Seattle, where an archive of his music is now kept.

RECORDINGS

*Sing the Dark Away*, RTÉ TV documentary, dir. M. Davitt (Dublin, 1995)
*Say a Song*, Northwest Archives NWAR CD 001 (1996)
*Ó Mo Dhúchas*, Gael-Linn CEFCD 051 (1997)

NICHOLAS CAROLAN

**He Anqing.** *See* He Luting.

**Heap, Charles Swinnerton** (*b* Birmingham, 10 April 1847; *d* Birmingham, 11 June 1900). English conductor, composer and organist. He was educated at Birmingham Grammar School, singing in public as a child, and later being articled to Edwin Monk at York. In 1865 he won the Mendelssohn Scholarship enabling him to study in Leipzig with Moscheles, Hauptmann, Richter and Reinecke (1865–7), sometimes deputizing for the latter as organist at the Gewandhaus. He also studied with W.T. Best at Liverpool and appeared as pianist and conductor in Birmingham. In 1871 he graduated MusB from Cambridge and in 1872 took the MusD. His conductorships included the Birmingham Musical Union (1870–86), the Wolverhampton Festival (1883, 1886), the North Staffordshire Festival, Hanley (1888–99), and the Birmingham Festival Choral Society (1895). A leading figure in Birmingham musical life for many years, he gave chamber concerts, piano and organ recitals, and was a popular and widely influential teacher. His compositions include a cantata *The Maid of Astolat* (Wolverhampton Festival, 1886), an oratorio *The Captivity*, a number of other choral works including two further cantatas, several anthems, two concert overtures, chamber and keyboard music and songs.

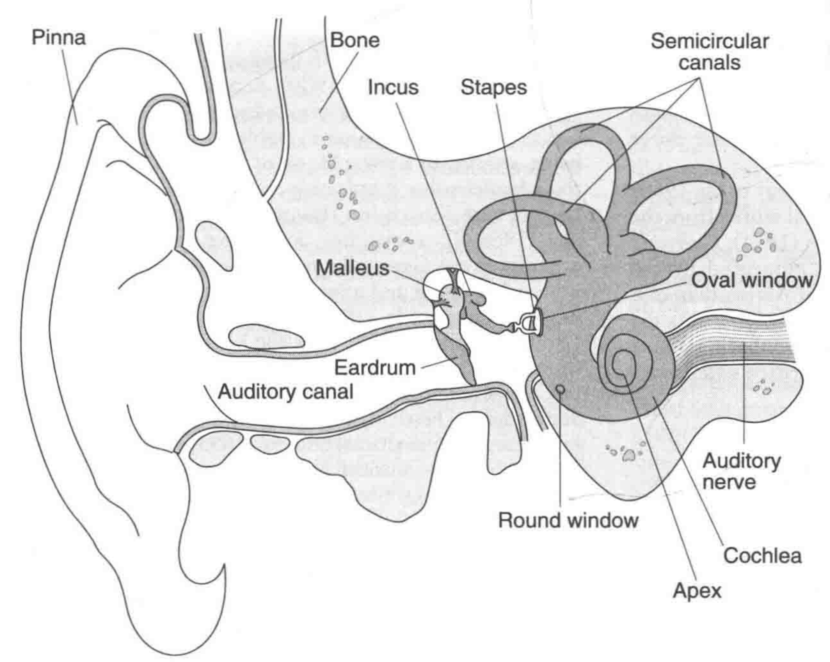
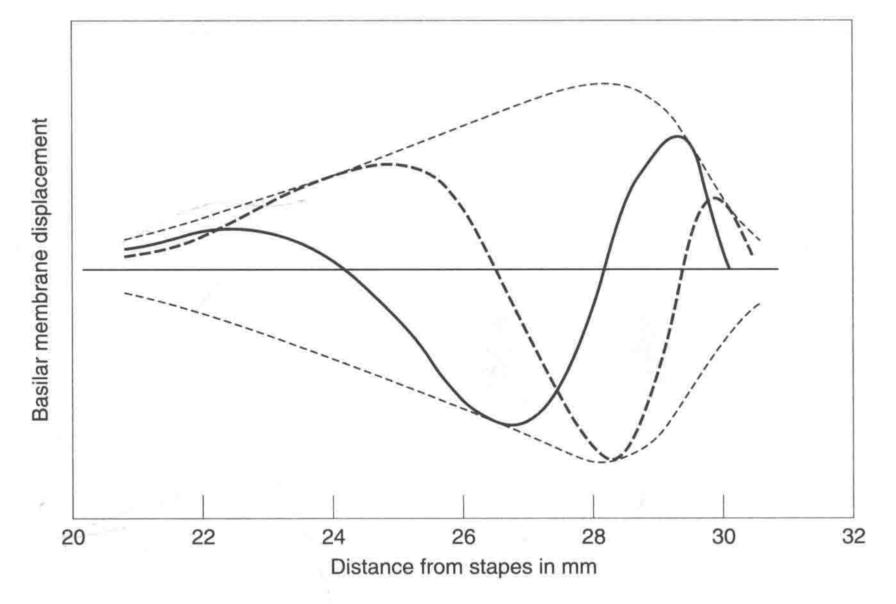
WILLIAM BARCLAY SQUIRE/JOHN WARRACK/ROSEMARY WILLIAMSON



**Hearing and psychoacoustics.** Hearing is the sense with which sound is detected and analysed. Psychoacoustics is concerned with the relationship between the physical characteristics of sound (e.g. intensity, physical location in space) and what is actually perceived by the listener (e.g. loudness, perceived position in space). It is also concerned with the ability to discriminate between different sounds. This section deals with basic aspects of hearing; for other aspects *see* ABSOLUTE PITCH; CONSONANCE, §2; PSYCHOLOGY OF MUSIC, §II; and SOUND.

1. Sound spectra and level. 2. Structure and function of the auditory system. 3. The limits of hearing. 4. Masking and frequency analysis. 5. The perception of loudness. 6. Frequency discrimination and the perception of pitch. 7. Localization of sounds.

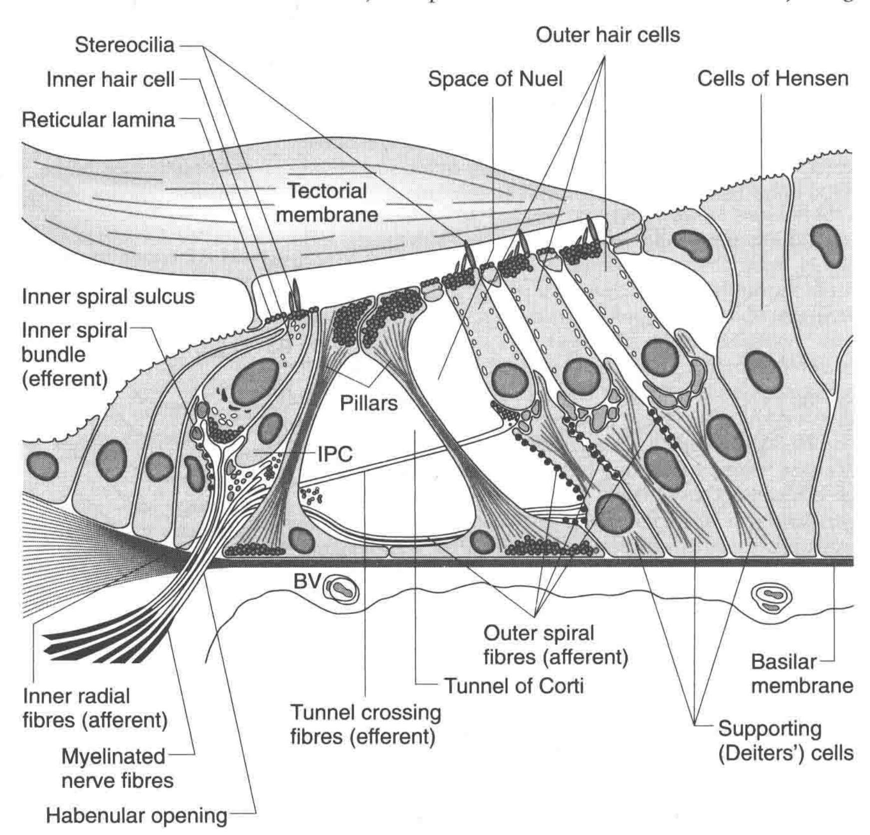


1. SOUND SPECTRA AND LEVEL. Sound usually originates from the vibration of an object. This vibration is impressed upon the surrounding medium (usually air) as a pattern of changes in pressure. The pressure changes are transmitted through the medium and may be heard as sound. Although any sound can be described in terms of sound pressure as a function of time (often called the waveform of the sound), it is often more meaningful to describe sound in a different way, based on a theorem by Fourier, who proved that any complex waveform can be analysed (or broken down) into a series of sinusoids. A sinusoid resembles the sound produced by a tuning-fork, and it is often called a simple tone or a pure tone. The analysis of a sound in this way is called Fourier analysis, and each sinusoid is called a (Fourier) 'component' of the complex sound. A plot of the magnitudes of the components as a function of frequency is called the 'spectrum' of the sound. Many of the sounds produced by musical instruments are periodic, or almost periodic; the waveform repeats at regular time intervals and the repetition rate remains rate remains roughly constant over the duration of a musical note. Such sounds have a clear pitch. Other sounds, such as that of a snare drum, are aperiodic and noise-like. A periodic sound is composed of a number of sinusoids, each of which has a frequency that is an integer multiple of the frequency of a common (not necessarily present) fundamental component. The fundamental component has a frequency equal to the repetition rate of the complex waveform as a whole. The frequency components of the complex sound are known as harmonics and are numbered, the fundamental being given harmonic number 1. The *n*th harmonic has a frequency which is *n* times that of the fundamental. The relative magnitudes of the harmonics vary across different instruments. For example, the clarinet has a relatively weak 2nd harmonic and a strong 3rd harmonic.

One of the reasons for representing sounds in terms of their sinusoidal components is that the human auditory system performs a similar analysis. For example, two simultaneous sinusoids, whose frequencies are not too close, are usually heard as two separate tones each with its own pitch. The perceived timbre of steady tones is quite closely related to the spectrum (Plomp, 1976).

Because the auditory system can deal with a huge range of sound pressures, sound level or magnitude is usually expressed using a logarithmic measure known as the DECIBEL. Each 20 decibel increase in level corresponds to an increase in sound pressure by a factor of ten. For example, a 60 decibel increase corresponds to a 1000-fold increase in sound pressure. Normal conversation typically has a level of 65–70 decibels, while an orchestra playing *fortissimo* may produce sound levels of 110 decibels at seats close to the front. Musicians seated in front of the brass section in an orchestra may be exposed

1. *Peripheral auditory system*



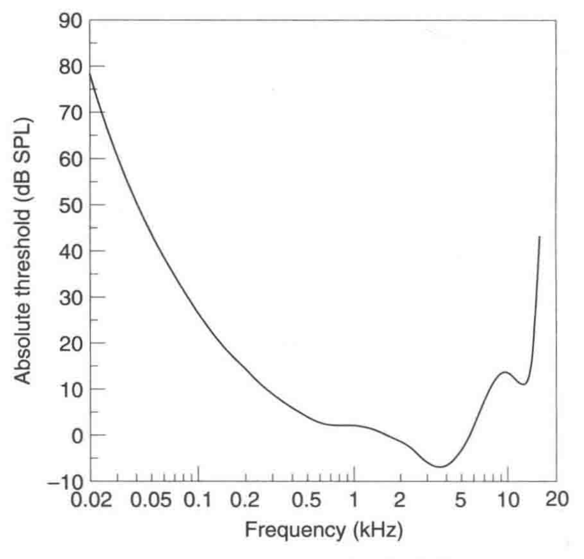
*2. The instantaneous displacement of the basilar membrane at two successive instants in time, derived from a cochlear model; the light dotted line represents the envelope traced by the amplitude peaks in the waveform (redrawn from von Békésy, 1947)*

to sound levels up to 120 decibels, which can be damaging to the ear (*see also* LOUDNESS).

2. STRUCTURE AND FUNCTION OF THE AUDITORY SYSTEM. Fig.1 shows the structure of the peripheral part of the human auditory system. The outer ear is composed of the pinna and the auditory canal or meatus. Sound travels down the meatus and causes the eardrum, or tympanic membrane, to vibrate. These vibrations are transmitted through the middle ear by three small bones, the ossicles (malleus, incus and stapes) to a membrane-covered opening (the oval window) in the bony wall of the spiral-shaped structure of the inner ear, the cochlea.

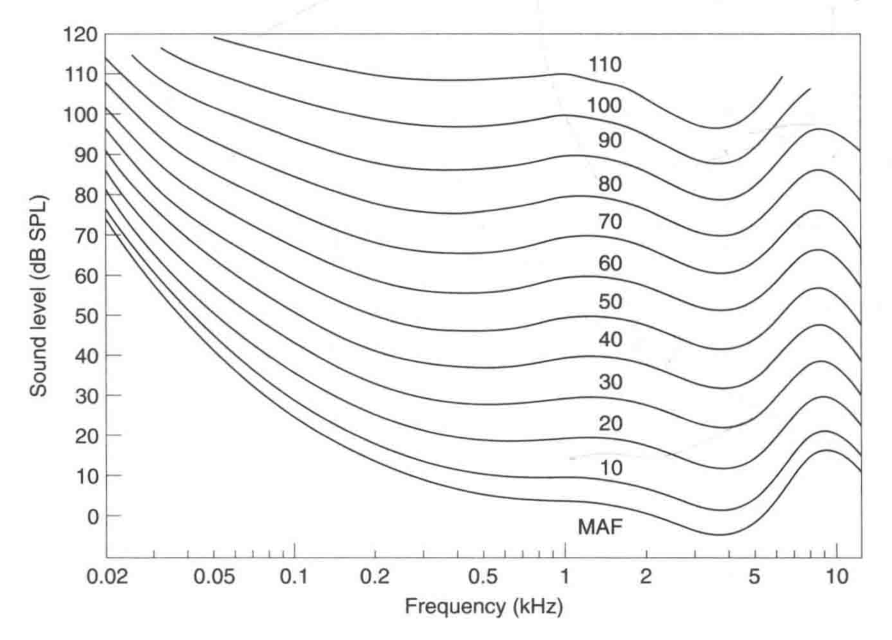
The cochlea is divided along its length by the basilar membrane, which moves in response to sound. The response to sinusoidal stimulation takes the form of a travelling wave which moves along the membrane, with an amplitude that increases at first and then decreases rather abruptly. Fig.2 shows the instantaneous displacement of the basilar membrane for two successive instants in time, in response to a 200 Hz sinusoid. The line joining

*3. Cross-section of the cochlea, showing the organ of Corti*



the amplitude peaks is called the envelope. The envelope shows a peak at a particular position on the basilar membrane.

The position of the peak in the envelope differs according to the frequency of stimulation. High-frequency sounds (around 15,000 Hz) produce a peak near the oval window, while low-frequency sounds (around 50 Hz) produce a peak towards the other end of the membrane (the apex). Intermediate frequencies produce peaks at intermediate places. Thus, each point on the basilar membrane is 'tuned' to a particular frequency. When a sound is composed of several sinusoids with different frequencies, each sinusoid produces a peak at its own characteristic place on the basilar membrane. In effect, the cochlea behaves like a Fourier analyser, although with a less than perfect frequency-analysing power.



Recent measurements of basilar membrane vibration have shown that the membrane is much more selectively tuned than originally found by von Békésy (1960). The better the physiological condition of the membrane, the more selective is the tuning (Khanna and Leonard, 1982). In a normal, healthy ear, each point on the basilar membrane responds with high sensitivity to a limited range of frequencies; higher sound intensities are required to produce a response as the frequency is made higher or lower. This selective tuning and high sensitivity probably reflect an active process; that is, they do not result simply from the mechanical properties of the membrane and surrounding fluid, but depend on biological structures that actively influence the mechanics (Yates, 1995).

Lying above the basilar membrane is a second structure, the tectorial membrane. Between the two membranes are hair cells, which form part of a structure called the organ of Corti (fig.3). The hair cells are divided into two groups by an arch known as the tunnel of Corti. Those on the side of the arch closest to the outside of the cochlea are called outer hair cells, and are arranged in three rows in cats and up to five rows in humans. The hair cells on the other side of the arch form a single row and are called inner hair cells. There are about 25,000 outer and about 3500 inner hair cells. The tectorial membrane, which has a gelatinous structure, lies above the hairs. When the basilar membrane moves up and down, a shearing motion is created between the basilar membrane and the tectorial membrane. As a result, the hairs at the tops of the hair cells are displaced. This leads to excitation of the inner hair cells, which leads in turn to the generation of action potentials in the neurones, or nerve cells, of the auditory nerve. The action potentials are brief electrical 'spikes' or 'impulses' which travel along the nerve and carry information to the brain. The main role of the outer hair cells may be actively to influence the mechanics of the cochlea so as to produce high sensitivity and selective tuning (Yates, 1995).

Each neurone in the auditory nerve derives its activity from one or more hair cells lying at a particular place on the basilar membrane. Thus, the neurones are 'tuned'. In addition, nerve firings tend to be phase-locked or

*4. Minimum audible sound level (or absolute threshold) as a function of frequency: from ISO 389–7, 1996*

*5. Equal-loudness contours for various loudness levels, as indicated on each curve; the bottom curve shows the absolute threshold (or minimum audible sound level)*

synchronized to the time pattern of the stimulating waveform. A given neurone does not necessarily fire on every cycle of the stimulus but, when firings do occur, they occur at roughly the same point on the waveform each time. This phase-locking is lost at high frequencies, above around 5000 Hz.

3. THE LIMITS OF HEARING. The absolute threshold of a sound is the minimum detectable level of that sound in the absence of any other external sounds. The sounds are usually delivered by a loudspeaker in a large anechoic chamber (a room whose walls are highly sound-absorbing). The measurement of sound level is made after the listener is removed from the sound field, at the point formerly occupied by the centre of the listener's head.

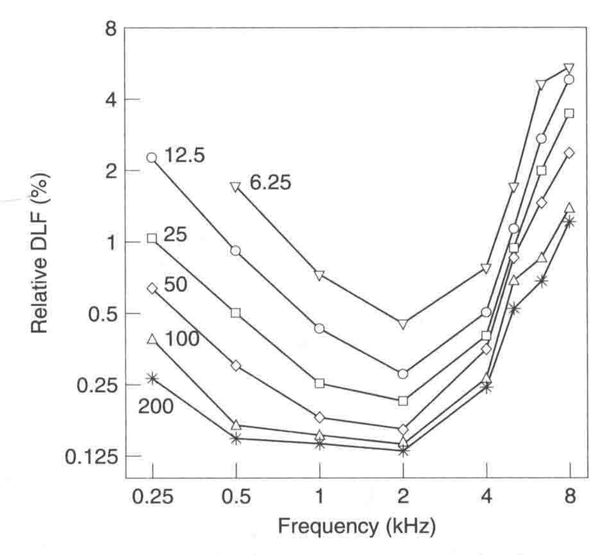


Fig.4 shows estimates of the absolute threshold of sound at various frequencies. The curve represents the average data from many young listeners with normal hearing. However, individual listeners may have thresholds as much as 20 decibels above or below the mean at a specific frequency and still be considered 'normal'. Absolute sensitivity is greatest in the frequency range between 2 and 5 kHz, partly because of a broad resonance produced by the ear canal. This frequency range corresponds to the higher formant frequencies (resonances in the vocal tract) of speech sounds. The 'singing formant', a resonance in the vocal tract produced by singers to boost frequencies between 2 and 3 kHz, typically falls within this range as well (Sundberg, 1974).

Thresholds increase rapidly at very high and very low frequencies. This effect depends at least partly on the transmission characteristic of the middle ear. Transmission is most efficient for mid-range frequencies and drops off markedly for very low and very high frequencies (Rosowski, 1991). The highest audible frequency varies considerably with the age of the listener. Young children can often hear tones as high as 20 kHz, but for most adults the threshold rises rapidly above about 15 kHz. The loss of sensitivity with increasing age (presbyacusis) is much greater at high frequencies than at low, and the variability between different listeners is also greater at high frequencies.

There is no clear low-frequency limit to human hearing. However, sounds with frequencies below about 16 Hz are not heard in the normal sense, but are detected by virtue of the distortion products (harmonics) that they produce after passing through the middle ear. In addition, very intense low-frequency tones can sometimes be felt as vibration before they are heard. The low-frequency limit for the 'true' hearing of pure tones probably lies at about 16 Hz. This is close to the lowest frequency that evokes a pitch sensation.

4. MASKING AND FREQUENCY ANALYSIS. The auditory system acts as a limited-resolution frequency analyser; complex sounds are broken down into their sinusoidal components. This analysis almost certainly depends mainly on the tuning observed on the basilar membrane. Largely as a consequence of this analysis, we are able to hear one sound in the presence of another sound with a different frequency. This ability is known as frequency selectivity, or frequency resolution. Frequency selectivity plays a role in many aspects of auditory perception, including pitch, timbre and loudness.

Important sounds are sometimes rendered inaudible by other sounds, a process known as 'masking'. Masking

*6. The smallest detectable change in frequency (DLF) plotted as a function of centre frequency and expressed as a percentage of centre frequency (log scale). Data from Moore, 1973*

may be considered as a failure of frequency selectivity, and it can be used as a tool to measure the frequency selectivity of the ear. One theory of masking assumes that the auditory system contains a bank of overlapping band-pass filters (Fletcher, 1940; Patterson and Moore, 1986). Each of these 'auditory filters' is assumed to respond to a limited range of frequencies. In the simple case of a sinusoidal signal presented in a background noise, it is assumed that the listener detects the signal using the filter whose output has the highest signal-to-masker ratio. The signal is detected if that ratio exceeds a certain value. In most situations, the filter involved has a centre frequency close to that of the signal.

A good deal of work has been directed towards determining the characteristics of the auditory filters (see Moore, 4/1997). One way of characterizing a filter is in terms of the range of frequencies to which it responds most strongly. This range is referred to as the 'bandwidth'. The bandwidth of an auditory filter estimated from masking experiments is often called the 'critical bandwidth' (Fletcher, 1940; Zwicker, 1961), although more recently the term 'equivalent rectangular bandwidth' has been used (Moore and Glasberg, 1983; Glasberg and Moore, 1990). This is defined as the frequency range covered by a rectangular filter with the same peak value and which passes the same total power of white noise (a sound containing equal energy at all frequencies). When we listen to a complex sound containing many partials, an individual partial can be 'heard out' (perceived as separate tone) when it is separated from neighbouring partials by a little more than one equivalent rectangular bandwidth (Moore and Ohgushi, 1993). For harmonic complex tones, this means that only the lower harmonics (up to the 5th to 8th) can be heard out (Plomp, 1964).

5. THE PERCEPTION OF LOUDNESS. The LOUDNESS of a given sound generally increases with increasing physical intensity. However, two sounds with the same intensity may appear very different in loudness, since loudness is also affected strongly by the spectrum of the sounds. It is useful to have a scale that allows one to compare the loudness of different sounds. A first step towards this is

to construct equal-loudness contours for sinusoids of different frequencies. Say, for example, we take a standard tone of 1 kHz at a level of 40 decibels, and ask the listener to adjust the level of a second tone (say, 2 kHz) so that it sounds equally loud. If we repeat this for many different frequencies of the second tone, then the sound level required, plotted as a function of frequency, maps out an equal-loudness contour.

If we repeat this procedure for different levels of the 1 kHz standard tone, then we will map out a family of equal-loudness contours (fig.5). Note that the contours resemble the absolute threshold curve (lowest curve in the figure) at low levels, but tend to become flatter at high levels. As a result, the relative loudness of different frequencies can change with overall sound level. For example, a 100 Hz tone at 40 decibels would sound quieter than a 1000 Hz tone at 30 decibels. However, if both tones were increased in level by 60 decibels, the 100 Hz tone at 100 decibels would sound louder than the 1000 Hz tone at 90 decibels.

The subjective loudness of a sound is not directly proportional to its physical intensity. For sound levels above about 40 decibels, the loudness roughly doubles when the intensity is increased by a factor of ten, which is equivalent to adding 10 decibels (Stevens, 1957). This property of the ear has important implications for the perception of musical sounds. For example, ten violins each playing with the same intensity will sound only twice as loud as a single violin, and 100 violins will sound only four times as loud as a single violin.

6. Frequency discrimination and the perception of pitch. Pitch is defined as the attribute of auditory sensation in terms of which sounds may be ordered on a musical scale, that is, the attribute in which variations constitute melody (*see* Pitch). For sinusoids (pure tones) the pitch is largely determined by the frequency: the higher the frequency, the higher the pitch. One of the classic debates in hearing theory is concerned with the mechanisms underlying the perceptions of pitch. One theory, called the 'place' theory, suggests that pitch is related to the position of maximum vibration on the basilar membrane, which is coded in terms of the relative activity of neurones tuned to different frequencies. The alternative theory, the 'temporal' theory, suggests that pitch is determined by the time pattern of neural spikes (phase-locking).

One major fact that these theories have to account for is our remarkably fine acuity in detecting frequency changes. This ability is called frequency discrimination and is not to be confused with frequency selectivity. For two tones presented successively and lasting 500 milliseconds, a difference of about 3 Hz (or less in trained subjects) can be detected at a centre frequency of 1 kHz. It has been suggested that tuning-curves (or auditory filters) are not sufficiently sharp to account for this acuity in terms of the place theory (Moore and Glasberg, 1986). A further difficulty for the place theory is that frequency discrimination worsens abruptly above 4 or 5 kHz (Moore, 1973). Neither neural measures of frequency selectivity (such as tuning-curves) nor psychoacoustical measures of frequency selectivity (such as auditory filters) show any abrupt change there.

These facts can be explained by assuming that temporal mechanisms are dominant at frequencies below 4–5 kHz. The worsening performance for frequencies above this level corresponds well with the frequency at which the temporal information ceases to be available. Studies of our perception of musical intervals also indicate a change in mechanism around 4–5 kHz (Ward, 1954). Below this, a sequence of pure tones with appropriate frequencies conveys a clear sense of melody. Above this, the sense of musical interval and of melody is lost, although the changes in frequency may still be heard. The important frequencies for the perception of music and speech lie in the frequency range where temporal information is available.

When we listen to a complex tone, such as that produced by a musical instrument or a singer, the pitch usually corresponds to the fundamental component. However, the same pitch is heard when the fundamental component is weak or absent completely, an effect called 'the phenomenon of the missing fundamental'. It appears that the perceived pitch is somehow constructed in the brain from the harmonics above the fundamental (Moore, 4/1977, #2731).

7. Localization of sounds. Two major cues for sound localization are differences in the time of arrival and differences in intensity at the two ears. For example, a sound coming from the left will arrive first at the left ear and be more intense in the left ear. For steady sinusoidal stimulation, differences in time of arrival can be detected and used to judge location only for frequencies below about 1500 Hz. At low frequencies, very small changes in relative time of arrival at the two ears can be detected, of about 10–20 millionths of a second, which is equivalent to a lateral movement of the sound source of one to two degrees.

Intensity differences between the two ears are primarily useful at high frequencies. This is because low frequencies bend or diffract around the head, so that there is little difference in intensity at the two ears whatever the location of the sound source. At high frequencies the head casts more of an acoustic 'shadow', and above 2–3 kHz the intensity differences are sufficient to provide useful cues. For complex sounds, containing a range of frequencies, the difference in spectral patterning at the two ears may also be important.

Binaural cues are not sufficient to account for all of our localization abilities. For example, a difference in time or intensity will not define whether a sound is coming from in front or behind, or above or below, but people can clearly make such judgments. The extra information is provided by the pinnae (Grantham, 1995; see fig.1 above). The spectra of sounds entering the ear are modified by the pinnae in a way that depends on the direction of the sound source. This direction-dependent filtering provides cues for sound-source location. The cues occur mainly at high frequencies, above about 6 kHz. The pinnae are important not only for localization, but also for judging whether a sound comes from within the head or from the outside world.

A sound is judged as coming from outside only if the spectral transformations characteristic of the pinnae are imposed on it. Thus, sounds heard through headphones are normally judged as being inside the head; the pinnae do not have their normal effect when headphones are worn. However, sounds delivered by headphones can be made to appear to come from outside the head if the signals delivered to the headphones are pre-recorded on a dummy head or synthetically processed (filtered) so as to

mimic the normal action of the pinnae. Such processing can also create the impression of a sound coming from any desired direction in space.

BRIAN C.J. MOORE

**Heartz, Daniel** (*b* Exeter, NH, 5 Oct 1928). American musicologist. He studied at the University of New Hampshire (BA 1950), and subsequently at Harvard University under Gombosi, Tillman Merritt and John Ward, gaining an MA (1952) and the doctorate (1957) with a dissertation on French 16th-century dance music. After teaching at the University of Chicago (1957–60), he became assistant professor (1960), associate professor (1964), full professor (1966) and emeritus professor (1994) at the University of California, Berkeley, where from 1969 to 1972 he served as chairman of the music department. His distinction has been recognized by the award of a Humanities Fellowship at Princeton University (1963–4), a Guggenheim Fellowship (1967–8), and the Dent Medal given by the Royal Musical Association for 'distinguished work in musicology' (1970). He was elected Vice-President of the American Musicological Society in 1974 and a member of the American Academy of Arts and Sciences in 1988. He was awarded the Berkeley Citation for distinguished achievement and for notable service to the university in 1994.

Heartz combines precise scholarship with a breadth of knowledge that makes him equally expert in the 16th and 18th centuries. He has a formidable grasp of social and political history and the development of the other arts, but his writing is also informed by a sensitive engagement with the music, particularly in dealing with Mozart. His main achievement in 16th-century studies, after his early work on dance forms, is his book on Pierre Attaingnant, in which he demonstrates the importance of the press in the renascent artistic life of Paris and in the development of French music. The book won the Otto Kinkeldey Award from the American Musicological Society. The new edition of *Idomeneo* is the chief product of his interest in the 18th century; but his work on its genesis and antecedents has led Heartz towards new views on operatic reform and the change of musical style during the period.

PHILIP BRETT

**Heath, John (i)** (*fl c*1550). English composer. His six-part anthem, *Almighty God, whose kingdom is everlasting*, is in *GB-Ob* Mus.Sch.E.423 (*c*1575). He may possibly be the Heath whose Service for men's voices is in Day's *Certaine Notes* (1565). This comprises a *Venite*, *Te Deum*, Benedictus, Kyrie, Creed, Sanctus and a Communion anthem. A comparison of this version of the Service with an earlier one, *c*1549, in the Wanley Partbooks (*GB-Ob* Mus.Sch.E.420–22), shows that considerable modifications were made when fitting the original music to the words of the 1552 Prayer Book. That such unremarkable music was thought to be worth modifying so extensively suggests that music for the reformed rites was scarce. A single voice of a partsong, *Hey downe, downe, downe, these women all*, is in *GB-Lbl* Harl.7578. No connection with the composer John Heath (ii) is known.

PETER LE HURAY

**Heath, John (ii)** (*b c*1589; *d* after 25 Dec 1672). English organist and composer. A parliamentary survey of 1649 records that in 1608 Philip Heath and his son John were granted the office of 'Clerke and Organiste' of Rochester Cathedral during the term of their natural lives. For their stipend they received £12 yearly from the Chatham parsonage. However, the cathedral records for 1609 name John Williams and John Robinson as joint holders of the office of organist for life; John Heath's name first appears in this connection in 1614. In 1649 Philip Heath was described in the parliamentary survey as 'deceased', and John's age was reckoned at 'about sixty years'. Payments to John for his work as organist were made from about 1614 until 1668. His name appears in the cathedral accounts as a lay clerk as late as Christmas 1672. A verse anthem, *When Israel came out of Egypt*, and a verse Evening Service are extant (*GB-Cp*, *GL*, *Lcm*, *Ob*, *WB*). They are in a simple, semi-polyphonic idiom, closely akin to that of Batten.

PETER LE HURAY/JOHN MOREHEN

**Heath, (George) Ted** [Edward] (*b* London, 30 March 1900; *d* Virginia Water, nr Egham, 18 Nov 1969). English trombonist and bandleader. He studied the tenor horn with his father before taking up the trombone. After a period as a street musician (until 1922), he became a regular sideman with several prominent British dance bands, notably those of Bert Ambrose (1928–36), Sydney Lipton (1936–9), Geraldo (1939–44) and Jack Hylton. Though not a strong jazz soloist, Heath seized the chance in 1944 to form his own band, which made regular broadcasts, gave the 'Swing Sessions' concerts at the London Palladium and soon began to tour frequently. Employing the very best section players, Heath successfully emulated the precision and versatility of such American bandleaders as Tommy Dorsey and Woody Herman (American musicians were banned from performing in Britain from 1935 to 1956). The many jazzmen who worked with him included Kenny Baker, Jack Parnell, and (consecutively) Ronnie Scott, Tommy Whittle, Danny Moss and Don Rendell; he also commissioned such enterprising arrangers as John Dankworth, Tadd Dameron (briefly in 1949), Kenny Graham and Bill Russo. In the mid-1950s Heath's dance band was one of the most popular in Britain; through its recordings it also gained much admiration in the USA, and in 1956 it made the first of several visits there. As many critics and former sidemen noted, Heath preferred predictable excellence to unplanned excitement, and his contribution consisted of raising standards of musicianship rather than encouraging new developments in jazz.

His band appeared in the films *London Town* (1946), *Dance Hall* 1950, *It's a Wonderful World* (1956) and *Jazz Boat* (1960). With his wife, Moira, he wrote a number of successful songs, relying on his royalty income to keep his band going during its earliest years. The best known of his compositions are *(I haven't said) Thanks for that lovely weekend* (1941), *I'm gonna love that guy* (1944), *Girls, Girls, Girls* and *When You Came Along* (both 1956).

Examples of his band's best records include *Opus 1* (1944), *Bakerloo Non-stop* (1946), *Turn on the Heath* (1947), *Lyonia* (1949), *Seven Eleven* (1953) and *King's Cross Climax* (1955).

BRIAN PRIESTLEY/ALYN SHIPTON

**Heather, William.** *See* HEYTHER, WILLIAM.

**Heavy metal.** A term used since the early 1970s to designate a subgenre of hard rock music. From the nineteenth century it had been used to refer to artillery or poisonous compounds. During the 1960s, British hard rock bands and the American guitarist Jimi Hendrix developed a more distorted guitar sound and heavier drums and bass that led to a separation of heavy metal from other blues-based rock. Albums by Led Zeppelin, Black Sabbath and Deep Purple in 1970 codified the new genre, which was marked by distorted guitar 'power chords', heavy riffs, wailing vocals and virtuosic solos by guitarists and drummers. During the 1970s performers such as AC/DC, Judas Priest, Kiss and Alice Cooper toured incessantly with elaborate stage shows, building a fan base for an internationally-successful style. Popularity waned at the end of the decade, but the early 1980s brought the 'new wave' of British heavy metal to revive the genre just as Edward Van Halen's astonishing virtuosity was inspiring a new generation of guitarists.

The 1980s brought on the one hand a wave of gender-bending, spectacular 'glam' metal from bands such as Poison and Mötley Crüe, and, on the other hand, the widespread adaptation of chord progressions and virtuosic practices from 18th-century European models, especially Bach and Vivaldi, by influential guitarists such as Van Halen, Randy Rhoads and Yngwie Malmsteen. Heavy metal was the most popular genre of rock music worldwide during this decade, even as harder underground styles developed in opposition to the pop-oriented metal of groups such as Bon Jovi. Metallica was the most influential band in THRASH METAL. In the 1990s, Metallica, Van Halen, Ozzy Osbourne and other veteran performers continued their success, but the term heavy metal was less often used to distinguish them from the rock mainstream. New groups such as Soundgarden, Korn and Rob Zombie continued the heavy metal tradition in some ways, but were not particularly concerned with claiming the genre label, which had lost much of its prestige.

At the height of its popularity in the 1980s, heavy metal often served as a scapegoat for social problems, through poorly-informed allegations of misogyny, Satanism, subliminal suggestions and musical impoverishment. Its lyrics addressed a wide array of issues and its music was diverse and often virtuosic. Lyrics and images often evoked horror and mysticism – just as many previous artists have in other styles – as a way of comprehending and criticizing the world and finding a place in it. Heavy metal fans became known as 'headbangers' on account of the vigorous nodding motions that sometimes mark their appreciation of the music.

ROBERT WALSER

**Hebden, John** (*b* ?Yorkshire, *c*1705; *d* London, Feb 1765). English cellist, composer and bassoonist. As a young man he played in chamber music concerts in Yorkshire, along with a group of unnamed German and Italian musicians based in York. After his marriage to Mary Preistland in York in 1732, he moved to London where he was a cellist in Thomas Arne's orchestra at Vauxhall, Drury Lane and

Covent Garden. In 1758 he was appointed musician-in-ordinary (bassoon) to George II.

Unusually for a composer working at Vauxhall he did not publish any songs or keyboard solos. His works (6 Solos, fl, bc (London, *c*1745), 1 ed. J. Barlow (London, 1979); 6 Concertos, 4 vn, va, vc, bc, op.2a (London, *c*1749)) combine italianate ceremonial vigour with highly emotional slow movements. A smooth serenity reflects his English heritage, with echoes of Yorkshire country dances.

An engraving of Hebden by Johann Faber (1741; London, British Museum) is after an oil painting by Philippe Mercier (1740) that was formerly in the possession of Thomas Osborne, 4th Duke of Leeds (1713–89), but is now lost.

RUZENA WOOD

**Hebenstreit, Michael** (*b c*1812; *d* after 1850). Austrian composer. Although very little is known about his life, he was one of the most talented and successful purveyors of music for Viennese suburban theatres in the 1830s and 40s. He wrote a few works for the Theater an der Wien, for a time under the same management as the Theater in der Leopoldstadt (known after 1847 as the Carltheater), but was mainly associated with the latter. The first of his 75 scores for farces, Singspiels and parodies for the Leopoldstadt theatre was to Schickh's *Das Zauberdiadem*, first performed on 6 February 1836. He provided the music for a number of works by Carl Haffner, including *Die Wiener Stubenmädchen* (1840), and for lesser works by Friedrich Kaiser, including the *Charakterbild Das Armband* (1842) and *Mönch und Soldat* (1849); but he is best remembered for his scores to ten of Nestroy's plays. These include the unsuccessful *Martha* parody (1848); the very popular *Die schlimmen Buben in der Schule*, performed 110 times between 1847 and 1862; *Judith und Holofernes* (1849), a brilliant parody of Hebbel's drama *Judith*; *Freiheit in Krähwinkel*, performed 36 times during the Revolution of 1848; *Liebesgeschichten und Heiratssachen* (1843) and *Karrikaturen-Charivari mit Heiratszweck*, which was Hebenstreit's last work for the theatre, performed on 1 April 1850. Apart from these works, his scores for J. Fenzl's pantomime *Harlekin als Adept* (1837) and Friedrich Hopp's *Doktor Fausts Hauskäppchen* (1840, revived at the Theater in der Josefstadt in 1855) enjoyed considerable popularity. In 1850 his name disappeared from the repertory lists and theatre almanacs.

References to a J. Hebenstreit and to a W. Hebenstreit in the Leopoldstadt theatre's repertory lists almost certainly refer to Michael Hebenstreit.

PETER BRANSCOMBE

**Hebenstreit** [Hebestreitt], **Pantaleon** (*b* Kleinheringen, nr Naumburg, 27 Nov 1668; *d* Dresden, 15 Nov 1750). German pantaleonist, violinist and composer. He is believed to have earned his living as a young man in Leipzig student circles by playing the violin and teaching dancing and keyboard instruments. Under the threat of arrest for debt, he fled to a village near Merseburg where he entered the pastor's household as tutor to his children. There he had the idea of developing an art instrument from the rustic form of the dulcimer used for dance music in the village inn; the pastor was a skilled craftsman and helped him in the transformation. In its final form it had double strings of metal and gut. Although the instrument attracted attention because of its flexible dynamic variation, it is not known whether Hebenstreit planned it with this characteristic in mind. (For illustration *see* HELLENDAAL, PIETER.)

The instrument's development must have been completed by 1697. A short time later Hebenstreit and his 'invention' are supposed to have attracted the attention of a courtier travelling through the village, who arranged for a demonstration at the Dresden court. Apparently Hebenstreit managed to settle his accounts in Leipzig, for in 1697 he could be heard in the city playing his 'cimbal'; Johann Kuhnau reported (in Mattheson's *Critica musica*, ii, 1725) that 'Monsr. Pantalon acted as *maître de danse*'. Kuhnau emphasized the technical difficulty and the skill of Hebenstreit's playing, and referred to a visit Hebenstreit had paid to J.B. Volumier in Berlin (which must have been well before 1697); Hebenstreit had spent three months there, devoted exclusively to practising. In 1698, as 'Ms. Pandalon, a dancing-master from Leipzig', he went to the court at Weissenfels, where Duke Johann Georg gave him a permanent appointment as dancing-master. Augustus the Strong heard him play there in 1703. In 1705 Hebenstreit visited Paris. Louis XIV was so impressed that he is said to have ordered the instrument to be called the 'pantaleon' after its inventor. The Abbé de Châteauneuf heard Hebenstreit at the salon of Ninon de Lenclos and referred to it in his *Dialogue sur la musique des anciens* (Paris, 1725); this is one of the first descriptions of the instrument. It is sometimes known as 'pantalon'.

Hebenstreit moved to the court of Duke Johann Wilhelm at Eisenach probably in June 1707 (although the document of his appointment is dated only 10 October). At first he was dancing-master to the duke's children; later he formed a musical establishment. Telemann, who was engaged as director in 1708, praised Hebenstreit's work, his mastery of the French style, his virtuosity on the pantaleon and his skill on the violin (which he rated above his own). In 1709 Telemann was promoted above him to Kapellmeister and by the end of the year Hebenstreit had left Eisenach and embarked on a series of concert tours which enhanced his reputation. In Vienna the emperor gave him a gold chain with his portrait. On 11 May 1714 he joined the musical establishment at the Dresden court as chamber musician and pantaleonist; he received the unusually high annual salary of 1200 thalers with an additional allowance of 200 thalers for the upkeep of his instrument, with its 185 strings. In 1729 he was also put in charge of the singing in the Protestant church in the palace. He was present, as electoral Vice-Kapellmeister, at W.F. Bach's audition on the organ of the Sophienkirche in Dresden on 22 June 1733; thanks to his approval Bach obtained the post of organist.

Failing eyesight forced Hebenstreit to give up playing the pantaleon in 1733. He was appointed court director of Protestant church music in 1734 and privy counsellor in 1740: both posts represented a means of providing for him in his old age, though he increasingly withdrew from

public life in his last years. In 1737 he made a glockenspiel of porcelain; the instrument had been produced for the first time only 30 years before. He also helped prepare the way for the development of the piano: C.G. Schröter, who claimed to have constructed three models for piano actions in 1717, acknowledged a debt to him, as did Wahlfried Ficker, who advertised a piano in 1731.

The development of the piano robbed the pantaleon of its popularity and it eventually disappeared altogether. Even so, in 1727 Hebenstreit took out a royal writ against Gottfried Silbermann in Freiberg for building large numbers of pantaleons, in addition to the ones commissioned by the inventor, and to have the construction of imitations made a criminal offence. Even to his contemporaries, Hebenstreit's importance as an artist lay almost entirely in his achievements as inventor and player of the pantaleon. The significance of his work as violinist, Kapellmeister and above all as teacher (his pupils included J.C. Richter, C.S. Binder and G. Gebel) was generally overlooked. In spite of Telemann's testimony to his mastery of the French style, Hebenstreit was not a notable composer; most of his music must have consisted of improvisation or free transcription of others' works, especially keyboard works, on the pantaleon. His known works included ten suites for orchestra with French overtures (listed in the catalogue of *D-DS* and destroyed in 1944); and an overture *La chasse* for nine instruments listed by J.F. Fasch in his catalogue of the Zerbst Hofkapelle.

DIETER HÄRTWIG/CHRISTIAN AHRENS

**Hebran.** *See* EBRAN.

**Hecht, Andrew** [Andreas] (*b* Holland; *d* Lincoln, bur. 31 March 1693). Dutch organist and composer. He worked in England from 1663, when he was appointed organist of Lincoln Cathedral, the dean of which (Michael Honywood) had been in Leiden and Utrecht during the Interregnum. Seven of his anthems are more or less capable of reconstruction. Dating from 1670 or earlier, they show that he had assimilated the English church style. His son, Thomas, succeeded Daniel Purcell as organist of Magdalen College, Oxford, in 1695, and served until 1734.

WORKS

9 anthems: Blessed is the man, *GB-Y* (inc.); Haste thee, O God, *Y* (inc.); God is our hope, *LI* (inc.); Hear my crying, O God, *Y* (inc.); Lord who shall dwell in thy tabernacle, *Y* (inc.); O God, whose neverfailing providence, *LI* (inc.), *Y*; Out of the deep, *LI* (inc.); Praise the Lord, O my soul, *Y* (inc.); Praise the Lord, ye servants, *Y* (inc.)

**Hecht, Edward** [Eduard] (*b* Dürkheim, 28 Nov 1832; *d* Manchester, 7 March 1887). English chorus master and pianist of German birth. He was trained at Frankfurt, first by his father, later by Jacob Rosenhain and others. In 1854 he emigrated to England; having settled in Manchester, where he came into close association with Charles Hallé, he became chorus master for the Hallé Concerts and deputy conductor of the orchestra. In 1860 he succeeded Hallé as conductor of the St Cecilia Choral Society, and he conducted the Manchester Liedertafel from 1859 to 1878. He was an excellent pianist; he appeared with Hallé in double concertos by Bach, Mozart and Dussek, and had a large number of private pupils. From 1875 he was lecturer on harmony and composition at Owens College, Manchester. His compositions include the choral works *The Charge of the Light Brigade* and *Eric the Dane* (both performed under Hallé) and numerous chamber works and piano pieces.

MICHAEL KENNEDY

**Heck, John Casper** (*b* ?Germany, ?1740; *d* ?London, 1791). English musical theorist. All that is known of Heck's life comes from the archives of the Royal Society of Musicians. He was married to Hannah Brown in 1760, admitted to the Society in 1772 and from 3 October 1779 was a claimant, being 'afflicted with a paralytick disorder for more than five years' and 'in a very deplorable situation – not being able to play – walk – or speak intelligibly'.

Heck brought to his theoretical writings a knowledge of German music and music theory. His *Musical Library* includes a list of J.S. Bach's works and a fugue from *Die Kunst der Fuge*, and contains one of the earliest English descriptions of a hierarchy of rhythmic structures that includes segments intermediate in length between a subject and an entire movement. An anonymous note on a manuscript in Cambridge University Library (Add.3845 f.1*v*) attributes to Heck the English translations of portions of treatises by Mattheson, Quantz and Fux published in London in the second half of the 18th century.

JAMIE C. KASSLER, MICHAEL KASSLER

**Heckel (i).** German family of woodwind instrument makers in whose hands the German bassoon, based on the researches of CARL ALMENRAEDER, reached its present degree of perfection. Many of the reforms carried out by successive members of the Heckel family are of so fundamental a nature that today the German-style instrument is frequently known as the 'Heckel' bassoon regardless of its actual maker. A collateral branch of the family has long been established as brass instrument makers. The first member to specialize in woodwind instruments was Johann Adam Heckel (*b* Adorf, Saxony, 14 July 1812; *d* Biebrich am Rhein, 13 April 1877). Having learnt his craft in his native town, in 1829 he travelled to Mainz to train under his uncle August Jehring, working for the Schott factory, where Carl Almenraeder's model of reform-bassoon was being developed. In March 1831 they established a workshop together, initially also supplying Schott, at Biebrich (now Wiesbaden-Biebrich). Until 1843 Heckel-Almenraeder bassoons were produced there for Schott and were stamped with his name. In 1862 he was visited by Richard Wagner, then working on *Die Meistersinger* at the castle nearby, who maintained a fruitful contact with him, later inspiring the creation of the extended 'A' bell for the bassoon, the Tristan Schalmei and the Hecklephone. J.A. Heckel was followed in business by his son Wilhelm (*b* Biebrich, 6 July 1856; *d* Biebrich, 13 Jan 1909) and Wilhelm's two sons: Wilhelm Hermann (*b* Biebrich, 6 July 1879; *d* Biebrich, 12 Jan 1952) and August (*b* Biebrich, 4 Oct 1880; *d* 19 Sept 1914). After the death of Wilhelm Hermann the ownership and direction of the firm passed successively to his son-in-law Franz Groffy (*b* 1896; *d* 1972), then to the latter's son-in-law Adolf Gebhard (*b* 1919), his daughter Edith Reiter (*b* 1937), and then to her children Angelika Lucchetta Reiter (*b* 1965) and Ralf Reiter (*b* 1971).

The name of Heckel is associated particularly with the bassoon, to the development of which the firm has made a unique contribution. Consistently resisting the temptation to enlarge the scope of their operations the firm has remained in its original premises, dedicated to customized service. Though now specializing in bassoon and double bassoon production (and the Heckelphone), the firm formerly produced woodwind instruments of all kinds. It has introduced several entirely new wind instruments of which the most important is the HECKELPHONE. Other innovations have included the heckel-clarina (1890), a type of oboe-system soprano saxophone, and the heckelphone-clarinet (1907), a type of wooden saxophone intended for military use. This instrument was not itself patented, but protection was obtained for its automatic octave mechanism which the maker claimed to have invented.

The brass instrument activities of the Heckel family, also of considerable distinction, began with the work of Johann Adam (*b* Adorf, 1809; *d* Dresden, 1866), cousin of his namesake above, who moved from Adorf to Dresden, where in 1836 he established what was to become a successful brass instrument workshop. He introduced a characteristic broad silver rim to the bell of the horn, trumpet and trombone, subsequently known as the Heckelrand. His son and successor Friedrich Alwin (*b* 1845) received in 1889 the prestigious appointment of maker to the Saxon Court; his model of trumpet was successful especially in Vienna. His son Theodor Alwin (*b* 1883; *d* 1954) was the last of this branch of the Heckel family.

PHILIP BATE/WILLIAM WATERHOUSE

**Heckel (ii).** German firm of publishers. It was founded in Mannheim around 1822 by Karl Ferdinand Heckel (*b* Vienna, 12 Jan 1800; *d* Mannheim, 9 April 1870), son of the court composer Johann Jakob Heckel (*c*1763–1811). After study with J.N. Hummel in Weimar, Karl Ferdinand set up an instrument shop in Mannheim in 1821. An art and music shop soon followed, and in 1828 Heckel bought the firm of G. Kreitner in Worms. Between 1827 and 1830 Heckel published a series of Mozart's operas in piano-vocal scores, *Wohlfeile Ausgabe von W.A. Mozart's sämmtlichen Opern*, which included as its sixth volume the first complete edition of *La finta giardiniera*; several volumes in the series have attractive lithographed title-page vignettes and the music is lithographed throughout. Beginning in the 1840s Heckel published an unusual edition of the complete string quartets of Beethoven, Haydn and Mozart, in very small miniature scores; similar editions of Mozart's string quintets and other chamber music followed.

In 1857 the firm was managed by Karl Ferdinand's son Emil Heckel (*b* Mannheim, 22 May 1831; *d* Mannheim, 28 March 1908), an early admirer and later friend of Richard Wagner and founder of the earliest German Richard Wagner society (1871), who was active in establishing the Bayreuth Festivals. In 1888 the firm issued the first edition of Wagner's *Die Feen*. In 1896 the vocal score of *Der Corregidor* and Book 2 of the *Italienisches Liederbuch* marked the start of a series of important Hugo Wolf publications. Including reissues of works previously published by Schott, Wetzler and Lacom, this amounted to a complete edition of Wolf's songs published during his lifetime. In 1902–3 the firm published six of Wolf's songs with orchestral accompaniment. Heckel sold its rights in Wolf's music to C.F. Peters in 1908.

NIGEL SIMEONE

**Heckel, Wolff** [Wolf] (*b* Munich, *c*1515; *d* in or after 1562). German lutenist and composer. He described himself in both editions of his *Lautten Buch* (Strasbourg 1556, 2/1562[24]) as a citizen of Strasbourg. He must thus have been associated with the printer and lutenist Bernhard Jobin and would also have gained there an excellent knowledge of French chansons and Italian dances, though he was chiefly interested in German dances and songs. He is important in the development of music for two lutes in German lute tablature. The first 40 pieces in his lutebook are for two lutes; in 14 of these the descant is tuned a major 2nd above the tenor lute, and in the remainder it is tuned a 4th higher. The ensemble writing frequently results in clashes between the two instrumental parts. In addition to the duets, the descant partbook contains 40 solo works and the tenor partbook 38. Heckel's inclusion of 20 pieces – intabulations of vocal works, saltarellos, passamezzos, paduanas and examples of the German Hoftanz – from the lutebook of H.J. Wecker (1552) is useful now that the latter is lost; he also took a few pieces from the first three lutebooks of Hans Neusidler (1536, 1540, 1544), who strongly influenced his writing for the lute. His most interesting pieces are the German court dances, several of which are embellished for the solo tenor lute. A few pieces are expressly said to be 'in four parts'. A very wide range of dances is represented, including German regional ones (Swabian, Saxon, Westphalian, Bavarian) and national ones (French, Hungarian, Swiss), the moresca ('Maruscat'), an early example of the passepied ('Pissipat'), and finally the Jewish dance ('Juden-Tanz'), already cultivated by Hans Neusidler, which is important in the evolution of lute technique because of its rapid chords and sharp accents on unison strings; for this piece the lute is tuned *A–d–f♯–a–d′–g′*. As well as for Hoftänze, Heckel's book is an important source for the survival of the passamezzo in German tablatures: it provides three examples of a genre that only Wecker and Hans Gerle (in his lutebook of 1552) had cultivated to any extent; in some cases the passamezzo is followed by a saltarello. He also paired the paduana with the saltarello. By including paduanas, Heckel continued a tradition begun by Rudolf Wyssenbach in his 1550 lutebook. His four fantasias and his intabulations of vocal pieces are less important. Heckel also made a contribution to the notation of lute tablature: instead of indicating the use of the forefinger by the customary dots, he made the duration mark curve to the left, or, for isolated minims, added an upward curving hook to the right.

WOLFGANG BOETTICHER, HANS RADKE

**Heckel-clarina.** An instrument invented by the Heckel family (*see* HECKEL (i)). (The name 'Heckelclarind' is incorrect and arose from a misprint in C. Forsyth: *Orchestration*, London, 1914, 2/1935, p.229.)

**Heckelphone.** A double-reed instrument with a wide conical bore and large tone holes. The most important member of the family is the instrument in C, pitched an octave below the oboe. This was developed by Wilhelm Heckel (1856–1909) and his sons Wilhelm Hermann and August (*see* HECKEL (i)) to fill Wagner's request, expressed in a meeting of 1879, for a baritone voice to fill out the double-reed choir. Wagner had envisioned an instrument combining 'something of the character of the oboe with the mellow but powerful sound of the alphorn'. Heckel did not succeed in producing such an instrument during Wagner's lifetime, but in 1904 he introduced one modelled on the *Basse de musette*, a forgotten instrument with a broad conical bore, large tone holes, a broad bell and a coiled brass crook (*see* HAUTBOIS D'ÉGLISE). The new instrument was built in three sections, retaining the broad bore proportions of its model, and with a large globular bell (vented by a single hole; see fig.1), to which was attached a short metal peg designed to support the instrument's not inconsiderable weight. The tone holes were as large as the bore would allow, the key system based on that of the German oboe, and the compass *B♭–g″*. Within a year Heckel had redesigned the lower part of the instrument, adding an insert between the lower joint and the bell for the *B♭* key and an added *A* key. During the 1920s the instrument was further redesigned by Heckel, and a version of the Conservatoire key system was developed for it (*see* OBOE, §II, 3), as well as a smaller bell vented with three holes and closed with a perforated cap. The reed is either a small version of a bassoon reed (the earliest players being bassoonists) or an enlarged english horn reed (as many modern players are oboists), placed on a curved crook. Music for the heckelphone is notated in the treble clef an octave above sounding pitch.

Richard Strauss was the first to write for the heckelphone, with an important part in *Salome* (1905). He scored for it in a number of other works between 1905 and 1915. It was used by Max von Schillings (*Mona Lisa* (1915) begins with a heckelphone solo), Orff, Varèse, Hindemith and others, and later especially by Henze. It was also used in Germany (later increasingly elsewhere) to play bass oboe parts in the works of English composers such as Holst (*The Planets*) and Delius; this practice has given rise to the incorrect idea that these parts were originally written for the heckelphone.

The success of the heckelphone led to the development of the two smaller instruments, the piccolo-heckelphone in F (1905) and the terz-heckelphone in E♭ (1915), sounding respectively a 4th and a minor 3rd higher than the treble oboe (fig.2). Both had a written compass of *b* to *e‴*. Strauss reported that the piccolo-heckelphone made an expedient replacement for the solo trumpet in Bach's Second Brandenburg Concerto, and the instrument was

1. *Heckelphone in C by Wilhelm Heckel, Biebrich am Rhein, height 134 cm, first quarter of the 20th century*

included in a few new works, but it never gained popularity and only 13 were made. The terz-heckelphone had a proportionally larger bore than the piccolo-heckelphone and possessed, according to W.H. Heckel, 'a full, round and sonorous shawm-like sound', but only a handful were produced.

**Heckelphone-clarinet.** An instrument invented by the Heckel family. *See* HECKEL (i).

**Heckmann, Harald** (*b* Dortmund, 6 Dec 1924). German musicologist. From 1944 he studied musicology with Gurlitt and Zenck at Freiburg University and took the doctorate in 1952 with a dissertation on W.C. Printz and his principles of rhythm. From 1950 to 1954 he worked in Freiburg as an assistant lecturer in musicology at the university and as a lecturer at the Staatliche Hochschule für Musik. From 1954 to 1971 he was in charge of the Deutsches Musikgeschichtliche Archiv in Kassel, and from 1955 he edited the catalogue of its microfilm collection. He was director of the Deutsches Rundfunkarchiv in Frankfurt (1971–91), general secretary (1959–74), president (1974–77), and honorary president (1980–) of the Association Internationale des Bibliothèques Musicales, and vice-president of RILM (1967–92). He was also secretary of the Gesellschaft für Musikforschung (1968–74) and RISM (1960–80) and has been president of the latter since 1980. As co-president of RIdIM (1972–), he is also editor of its yearbook, *Imago musicae*. For many years he has contributed significantly to the Internationale Schubert Gesellschaft (secretary, 1953–67; committee member, 1965–90; president, 1990), which publishes the new collected edition of Schubert's works, and he has served on a number of government commissions overseeing German music libraries. He is editor of two collected editions, Documenta Musicologica and Catalogus Musicus. His principal areas of research are music documentation, musical iconography and the application of information technology in musicology.

HANS HEINRICH EGGEBRECHT/JUTTA PUMPE

**Heckscher** [née Massey], **Celeste de Longpré** (*b* Philadelphia, 23 Feb 1860; *d* Philadelphia, 18 Feb 1928). American composer. She was born into an artistic family and began composing at the age of ten. Her early training in piano and composition, however, was obtained in spite of her parents' objections. In 1883 she married Austin Stevens Heckscher; they had two daughters and two sons. In the 1890s Heckscher studied composition with Henry Albert Lang and orchestration with Wasili Leps in Philadelphia; she is also reported to have studied in Europe. She composed two operas, *The Flight of Time* and *Rose of Destiny* (Philadelphia, 1918); an orchestral suite, *Dances of the Pyrenees*, which was also staged as a ballet (Philadelphia, 1916); chamber music, piano works and songs. In 1913 she gave a concert of her own compositions at the Aeolian Hall in New York. For many years she was president of the Philadelphia Operatic Society.

CAROL NEULS-BATES

**Hecyrus, Christoph.** *See* SCHWEHER, CHRISTOPH.

**Hedges, Anthony (John)** (*b* Bicester, 5 March 1931). English composer and teacher. He read music at Keble College, Oxford (1949–55), where he was awarded the BMus degree. He taught at the Royal Scottish Academy of Music from 1957 to 1963, during which time he regularly reviewed concerts for various Scottish newspapers. In 1963 he was appointed lecturer in Music at the University of Hull, retiring as reader in composition in 1995. In 1972–3 he was chairman of the Composer's Guild of Great Britain.

His music manifests considerable stylistic and technical diversity. Commissioned by the BBC for the official opening of the Humber Bridge, *Scenes from the Humber* is an example of what he has described as his 'light music', combining the ceremonial with the plaintive and the humoresque. In contrast, his First Symphony (1975) is a sustained argument in 20th-century tonality, maintaining a functional distinction between dissonance and consonance over its entire duration, most notably in the skilful manipulation of a thematic augmented 4th that is denied resolution until the closing bars of the work. His chamber music reveals the breadth of his compositional thought, and contains experimental works such as the serial-derived *Four Piano Pieces* (1968); the beautiful and moving character pieces *Prayers from the Ark* (1976); and the more recent *Five Aphorisms*, in which it is possible to detect a synthesis of the many styles and techniques that he has employed during his career. He was awarded an honorary DMus by the University of Hull in 1997.

WORKS
(*selective list*)

Stage: Shadows in the Sun (op, J. Hawkins), op.61 , 1975–6
Vocal: A Manchester Mass, op.55, chorus, orch, brass band, 1974; Bridge for the Living (P. Larkin), op.62, T, chorus, orch, 1975; Prayers from the Ark, op.68, T, pf, 1976; The Temple of Solomon, op.78, chorus, orch, 1979; Aspects of Love, op.103, chorus, 1986; I'll Make Me a World, op.114, children's chorus, 1990; partsongs, anthems and other works
Orch: Variations on a Theme of Rameau, op.34, 1969; Sym. no.1, op.57, 1975; Festival Dances, op.64, 1977; Scenes from the Humber, op.90, 1980; Sym. no.2, op.130, 1997

ALASTAIR BORTHWICK

**Hedstrøm, Åse** (*b* Moss, 17 April 1950). Norwegian composer. She received a degree in music pedagogy and a graduate degree in composition from the Norwegian State Academy of Music (1980), where she studied composition with Finn Mortensen. She also studied at the Institute of Sonology in Utrecht (1975–6) and with Sven-David Sandstrøm (1989–90). During the 1980s Hedstrøm became one of the most prominent composers of her generation in Norway, receiving the Norwegian Society of Composers' 'Composition of the Year' award in 1985 and again in 1989. Among the compositions which have received international recognition are the orchestral works *Anima* (1984) and *Nenia* (1986). Hedstrøm has also contributed to Norway's musical life as a member of varied musical and political committees and councils, not least as artistic and managing director of Ultima-Oslo Contemporary Music Festival. Her music draws from the neo-Expressionist tradition and often plays upon fundamental physical experiences such as breathing, friction and movement.

HALLGJERD AKSNES

**Hedwall, Lennart** (*b* Göteborg, 16 Sept 1932). Swedish composer, conductor, pianist and writer. He began playing the organ as a schoolboy and studied composition privately with Torsten Sörensen and later also with Bäck, Blomdahl, Fortner, Krenek and Jelinek. He studied conducting with Tor Mann and Swarowsky and the piano with Carl Tillius, Olof Wibergh and Gottfrid Boon. He was conductor at the Riksteater (1958–60), the Stora Teater in Göteborg (1962–5), the Stockholm Opera (1967–8) and the Örebro Orchestra Foundation (1968–74); he has also been a guest conductor with most Swedish orchestras. He taught at the College of Speech and Drama in Göteborg (1963–7) and its equivalent in Stockholm, now the Operahögskola, from 1968 to 1970, and from 1974 onwards. He obtained his doctorate in 1995 and became a lecturer in musicology in Stockholm in 1997. A member of the board of the Society of Swedish Composers (1968–81), he is the only Swede to be a member of the Accademia Filarmonica in Bologna.

His musical research has resulted in a thorough history of the Swedish symphonic tradition and also studies of the Swedish national romantics Alfvén and Peterson-Berger, in addition to extensive musical journalism. He made his début as a composer in 1950, firstly with a string quartet and a number of organ works in a free tonal style, and has amassed a large output of almost 400 compositions. His works, which represent all the traditional genres, are of mostly a lyrical character. He is also a prominent lied accompanist.

WORKS
(*selective list*)

Stage: Hemlighet [Secret], nar, vn, vc, perc, 1954; Figurerner [The Individuals] (theatre music), 1v, fl, va, vc, perc, 1955; Gustav Adolf (theatre music), boys' chorus, unison male chorus, 1961; Herr Sleeman kommer (op), 2 S, Mez, T, Bar, orch, 1976–8; Amerika, Amerika (emigrantopera), solo vv, SATB, orch, 1980–81; Birgittas klädnad [The Dress of Birgitta], church play, 1v, SATB, fl, ob, tpt, tbn, va, vc, perc, 1987

ROLF HAGLUND

**Heel.** *See* FROG.

**Heenan, Ashley (David Joseph)** (*b* Wellington, 11 Sept 1925). New Zealand composer, conductor and administrator. He studied at Victoria University, Wellington (BMus 1956), and at the Royal College of Music, London (1948–50), with Gordon Jacob and William Lloyd Webber. Since returning to New Zealand he has played an influential role in musical life, notably as conductor of the National Youth Orchestra (1965–75) which he took on a successful tour of Europe, China and Japan. He was also musical director of Schola Musica formed from the New Zealand Broadcasting Corporation Orchestral Trainees (1976–84), which toured in Australia in 1974. His other appointments include those of musical director of the Royal NZ Ballet (1966–8), musical adviser to the QEII Arts Council (1964–65), first New Zealand writer/director of APRA (1966–80), first chairman of the NZ Composers Foundation (1981–5) and deputy chairman of the New Zealand Music Centre (1991–7). He has made numerous recordings with Schola Musica and NZSO and in 1976 gained the NZ Phonographic Industry Award for an outstanding New Zealand music recording (Lilburn's Symphony no.2). The Composers Association of New Zealand gave him their 1981 award for outstanding services to music. He was made an OBE in 1983.

While his harmonic language shows Russian and Impressionistic influences, it can also be quite personal. He writes with felicity for string orchestra and has a strong sense of orchestral colour. He has taken a deep interest in Maori music. His publications include *The New Zealand Symphony Orchestra* (Wellington, 1971) and NZBC *Schola Musica* (Wellington, 1974).

J.M. THOMSON

**Heer, Johannes** (*b* Glarus, *c*1489; *d* Glarus, 1553). Swiss clergyman and music editor. He was a boy chorister in Sitten and was in Zürich in 1504. He studied at Paris University from 1508, and was a member of the 'German Nation' student organization. In 1510 he began to use the title *magister*. After his studies in the arts, he turned to theology and was a clergyman in Glarus until his death. After 1529 he was converted to Protestantism and married but he retained a sympathetic attitude towards Catholics. He knew Zwingli, the historian Aegidius Tschudi, and his fellow townsman, the humanist Glarean.

Heer is important in music history as the compiler and owner of a manuscript anthology of music (*CH-SGs* 462, ed. in SMd, v, 1967). Most of it was copied in 1510, during Heer's final student years in Paris or immediately thereafter, with additions in 1512, 1514 and 1530. The manuscript gives an instructive view of the music then current in Paris and of that sung in the 'German Nation'. It contains 88 pieces in a colourful variety of genres, and includes Latin motets, instrumental carmina, chanson motets, French chansons, many German Tenorlieder and a few works with Italian texts. Among the composers are Agricola, Brumel, Compere, Févin, Josquin, Isaac, Prioris, Rigo de Bergis, ? La Rue, Dietrich, Adam von Fulda, H.L. (? Hans Lienhard), Obrecht, Senfl and an unknown composer with the initials F.S. Heer may have included a few works of his own in the collection.

MARTIN STAEHELIN/R

**Heermann, Hugo** (*b* Heilbronn, 3 March 1844; *d* Merano, 6 Nov 1935). German violinist. As a boy of ten he was introduced by Rossini to Fétis, then director of the Brussels Conservatory, in which institution he studied the violin under J. Meerts and played in a quartet with Hubert Léonard and Adrien Servais. In 1865 he was appointed leader of the Museum Concerts in Frankfurt, and in 1878 he became professor of the violin at the Hoch Conservatory, retaining that position till 1904, when he founded a violin school of his own. He also was leader of the Frankfurt String Quartet. He moved to Chicago in 1907, to Berlin in 1910 and to Geneva in 1911, retiring in 1922. He edited the *Violin-Schule von Ch. de Bériot* (Mainz, 1898), among other works, and wrote an autobiography, *Meine Lebenserinnerungen* (Leipzig, 1935; repr. 1994, with commentary and work-list by G. Emig).

W.W. COBBETT/JOHN MORAN

**Heermann, Johannes** (*b* Raudten, Silesia, 11 Oct 1585; *d* Lissa, Poland, 17 Feb 1647). German poet and theologian. He spent his youth in Raudten and at the age of 17 he went to the Gymnasium at Fraustadt. From 1603 he attended the Elisabeth Gymnasium at Breslau, and from 1604 to 1609 the princely school in Brieg. Owing to his outstanding Latin poetry, he was crowned poet at the age of 23 in 1609. In 1611 he became the pastor of Köben, where he remained until 1638 or 1639, when he retired in extremely poor health to Lissa. He was nursed

throughout his later adult life by his second wife, with whom he had four children.

Heermann's Latin poetry gave way to German verse according to the new Opitzian poetics. His hymnal, *Devoti musica cordis* (1630), contains musical notes and was extremely popular, reaching a seventh edition in 1678, while his *Exercitium pietatis* (1630), another collection of German devotional songs, was issued in a 24th edition in 1742. Heermann's *Zwölff geistliche Lieder* (1639) were written during years of exile and hardship during the Thirty Years War. His songs were of a pronounced pious and subjective nature, including pleas for succour and comfort in the face of adversity. His *Sonntags- und Fest- Evangelia* (1636) consist of rhyming narrative paraphrases in the easy rhythms of folk ballads to be sung to familiar melodies.

Heermann also published collections of sermons, including *Crux Christi* (1618) and *Heptalogus Christi* (1619), which enjoyed several printings well into the 18th century. His numerous funeral sermons were collected and published in several volumes late in his life and after his death. His dedicatory verses attest to relationships with the leading Silesian poets of the day, including Martin Opitz and Andreas Tscherning. Heermann's poetry exerted a demonstrable influence on Andreas Gryphius, one of the greatest lyric talents of the German Baroque.

Heermann, the author of over 400 devotional songs, can be considered the most important writer of German hymns after Martin Luther. While the German mystical tradition left its traces in Heermann's poetic output, he remained a staunch Lutheran. Because of the extremely personal nature of his songs, Heermann is an important predecessor of Pietism. His songs, which have been included in the hymnal of the German Protestant church until the present day, include *Herzliebster Jesu, was hast du verbrochen* and *O Gott, du frommer Gott.*

M.R. WADE

**Heerup, Gunnar** (*b* Copenhagen, 5 April 1903; *d* Copenhagen, 27 Nov 1989). Danish writer on music and educator. After taking an organ diploma at the Royal Danish Conservatory (1924), he studied musicology at the University of Copenhagen (MA 1928). He taught music at the Copenhagen Choir School founded by Mogens Wöldike (1929–48), then at Aurehøj Gymnasium (1948–9) and at the College of Further Education for Teachers (1941–73), where he was appointed professor in 1969. Heerup was an active force in music education in Denmark in a variety of capacities: as author and editor of music textbooks and articles, as a member of the editorial board of the Folke- og Skolemusik series (1934–72), as a founder and chairman of the Danish Society for Music Therapy (1969) and as a member of numerous committees and governmental commissions. He was editor of *Dansk musiktidsskrift* (1929–41), in which he published the first extended study of the music of Bartók in Scandinavia (1929); during the war (1942–6) he edited and published the lively and often controversial journal *Levende musik*, remembered as not the least of his contributions. In 1973 he was presented with a Festschrift by his friends and pupils (*Festskrift Gunnar Heerup*, ed. J. Høybye, F.V. Nielsen and A. Schiøtz, Egtved, 1973).

JOHN BERGSAGEL

**Heffe, Alphonse d'.** *See* EVE, ALPHONSE D'.

**Hegar, Friedrich** (*b* Basle, 11 Oct 1841; *d* Zürich, 2 June 1927). Swiss conductor and composer. He was the eldest and most successful son of Ernst Friedrich Hegar (*b* Darmstadt, 8 Dec 1816; *d* Basle, 1 Nov 1888), owner of a music engraving firm in Basle. Friedrich Hegar studied first in Basle and then from 1857 to 1859 at the Leipzig Conservatory under Hauptmann, Rietz and David; during the same period he was a violinist at the Gewandhaus. In 1860 he became the leading violinist of the Bilse orchestra in Warsaw. After visiting Paris and London he returned to Basle, but in 1861 was appointed conductor of the choir and orchestra at Gebweiler in Alsace. A year later Theodor Kirchner summoned him to Zürich; he settled there and contributed greatly to its musical life for more than half a century. From 1862 to 1865 he was Konzertmeister of the newly established orchestra, then becoming its conductor (until 1906). He also directed various choirs: in 1863 that of the Aktientheater; from 1865 the Gemischter Chor (until 1901) and the Stadtsängerverein (until 1867); from 1875 to 1878 the male choir Harmonie; and from 1891 to 1896 the Lehrergesangverein. He helped to found the Zürich Music School (which became the conservatory) and was later appointed director. Together with Carl Attenhofer and the painter Arnold Böcklin, he received the honorary doctorate of the University of Zürich in 1889; in 1917 he became a member of the Royal Academy of the Arts in Berlin.

Hegar's influence as a conductor in Zürich can hardly be overestimated. He gave 101 performances of Brahms, 57 of Bach and 115 concert performances of Wagner. He achieved some fame as the composer of the oratorio *Manasse*, but was chiefly known through his work with Zürich's male-voice choirs, which he transformed from informal Liedertafel into serious musical institutions. A corresponding development occurred in his male-voice choral compositions, which increasingly reveal symphonic features, with the part-writing gradually assuming an almost orchestral treatment.

Of Hegar's brothers, Emil (*b* Basle, 3 Jan 1843; *d* Basle, 13 June 1921) was first cellist at the Leipzig Gewandhaus and later taught singing in Basle, and Julius (*b* Basle, 11 May 1847; *d* Zürich, 5 April 1917) taught the violin and the cello at the Zürich Music School. His son Johannes (*b* Zürich, 30 June 1874; *d* Munich, 25 April 1929) was mainly known as the cellist of the Frankfurter Trio, and of the Hugo Heermann, the Reber and the Berber quartets.

F.R. BOSONNET/CHRISTOPHER FIFIELD

**Hegdal, Magne** (*b* Gjerdrum, 27 Dec 1944). Norwegian composer. He initially trained as a pianist, making his début in 1969, but subsequently turned to composition studies with Conrad Baden and Finn Mortensen at the Oslo Conservatory, where he took a graduate degree in composition in 1972. He has taught composition and music theory at the Norwegian State Academy of Music, has published articles on music, and has worked as a music critic in the Norwegian newspaper *Dagbladet* (1969–85). His music has been featured at a number of international music festivals, and he has received the Norwegian Society of Composers' 'Composition of the Year' award four times – for *Morgensolens sange*, *Konsert*, *For 2 no.3* and *Grande symphonie de salon*. This last work was also nominated for the Nordic Council Music Prize in 1997.

Stylistically the composer moved from serialism to Cage-inspired aleatory music during the 1970s and 80s. Since then he has turned to a freer style in which he seeks to create a synthesis between constructivism and intuition, and between order and chance. His works from the 1990s have a classic modernist flavour with gestures reminiscent of Webern's music. Often, however, the modernist elements are juxtaposed with stylistic and direct quotes from earlier musical traditions.
